# What's New

*A Gallery of Document Shells* adds to the suite of manuals for MacKichan Software products. Along with *Typesetting Documents in Scientific WorkPlace and Scientific Word*, this online manual is a response to the many users who have requested more information about L<sup>A</sup>T<sub>E</sub>X typesetting in *Scientific WorkPlace (SWP)* and *Scientific Word (SW)*.

## About This Manual

The primary goal of this manual is to help you choose document shells that are appropriate for your typesetting purposes. The manual explains the key characteristics of the shells provided with the program. It contains brief discussions and illustrations of typeset documents created with each shell, except those created with *Scientific Notebook (SNB)*, which are intended for direct printing instead of typesetting. A secondary goal is to help you choose appropriate styles for automatically created BibT<sub>E</sub>X bibliographies and citations. The manual explains and illustrates the characteristics of each available BibT<sub>E</sub>X bibliography style.

This manual doesn't apply to *SNB* or to the *Scientific Viewer*, which don't support typesetting. The manual excludes any discussion of shells not intended to produce a typeset document.

We assume that you have successfully installed *SWP* or *SW* and that you have a working knowledge of the program. You can find additional information about the program in these accompanying manuals:

- *Getting Started with Scientific WorkPlace, Scientific Word, and Scientific Notebook.*
- *Creating Documents with Scientific WorkPlace and Scientific Word.*
- *Doing Mathematics with Scientific WorkPlace and Scientific Notebook*

We also assume you are familiar with basic T<sub>E</sub>X, the extraordinary mathematics typesetting program and language designed by Donald Knuth. Also useful is knowledge of L<sup>A</sup>T<sub>E</sub>X, a set of macros designed by Leslie Lamport to enhance T<sub>E</sub>X with document-structuring features such as tables of contents, chapters and sections, lists, and bibliographies. An understanding of BibT<sub>E</sub>X, the public domain program created by Oren Patashnik to create and format bibliographies and the citations that refer to them. is helpful as well. The Windows implementation of T<sub>E</sub>X and L<sup>A</sup>T<sub>E</sub>X that is supplied with the program is TrueT<sub>E</sub>X, a product of TrueT<sub>E</sub>X Software. The version of TrueT<sub>E</sub>X shipped with *SWP* and *SW* includes PDFT<sub>E</sub>X support.

The manual includes information about T<sub>E</sub>X and L<sup>A</sup>T<sub>E</sub>X, document classes, L<sup>A</sup>T<sub>E</sub>X packages, typesetting options, BibT<sub>E</sub>X bibliography styles, and document shells. While a good understanding of T<sub>E</sub>X, L<sup>A</sup>T<sub>E</sub>X, and BibT<sub>E</sub>X will help you better understand how these often complex elements interact, a thorough discussion of those programs is beyond our scope here. If you need additional information, we suggest you refer to these excellent sources: *The T<sub>E</sub>Xbook* by Donald E. Knuth; *L<sup>A</sup>T<sub>E</sub>X, A Document Preparation System* by Leslie Lamport; *The L<sup>A</sup>T<sub>E</sub>X Companion* by Michel Goossens, Frank Mittelbach, and Alexander Samarin; and *A Guide to L<sup>A</sup>T<sub>E</sub>X: Document Preparation for Beginners and Advanced Users* by Helmut Kopka and Patrick W. Daly.

## Typesetting Basics

Even if you have a basic understanding of the program, it's important to review how typesetting works and why the appearance of your printed document is so noticeably different when you typeset and when you don't. You can find basic information in more detail in the online Help and in *Creating Documents with Scientific WorkPlace and Scientific Word*. Version 5 adds the capability to produce typeset PDF files.

## Producing Documents with Typesetting

Throughout our documentation, we refer to the processes that involve L<sup>A</sup>T<sub>E</sub>X typesetting as *typeset compile*, *typeset preview*, and *typeset print*, and to those that involve PDF<sub>T</sub><sub>E</sub>X typesetting as *typeset compile PDF*, *typeset preview PDF*, and *typeset print PDF*. (The processes are similar; general statements about *typesetting* refer to both sets of processes.) These processes are available as commands on the **Typeset** menu and as buttons on the Typeset toolbar.

When you typeset your document with L<sup>A</sup>T<sub>E</sub>X (using the **Preview** or **Print** commands on the **Typeset** menu), the compilation yields a *device independent*, or DVI, file, which is a finely typeset version of your document. The DVI file may contain automatically generated document elements such as cross-references, tables of contents, and numbers for equations. The compilation may also result in other generated files, such as table of contents files or bibliography files, that are required by the DVI file. The program then sends the DVI file to the typeset previewer or to the printer. Consequently, the document you see on the typeset preview screen or in print may have a noticeably different appearance from the document you see as you work in the document window.

When you typeset your document with PDF<sub>L</sub><sup>A</sup>T<sub>E</sub>X (using the **Preview PDF** or **Print PDF** commands on the **Typeset** menu), the compilation yields a PDF file that contains your typeset document embedded with all necessary fonts and graphics. As with the DVI file, the PDF file may contain automatically generated document elements such as tables of contents and numbers for equations. If your document includes the *hyperref* package, any cross-references in the document are changed to hyperlinks. The program sends the PDF file to the PDF reader installed on your system or the printer. The PDF file has an almost identical appearance to the DVI file but may have a noticeably different appearance from what you see as you work in the document window.

The typeset appearance of your document depends on typesetting specifications from several different sources, all set initially by the shell you use to create your document:

- The *typesetting specifications*, a collection of T<sub>E</sub>X and L<sup>A</sup>T<sub>E</sub>X instructions related to typesetting document elements, including those represented by the tags on the Tag toolbar in the program window.
- Any L<sup>A</sup>T<sub>E</sub>X *packages* or *options* specified for the document or the shell.
- Any additional T<sub>E</sub>X or L<sup>A</sup>T<sub>E</sub>X *commands* that appear in the document preamble or body.
- The BibT<sub>E</sub>X style chosen for the document, if any.

These specifications don't affect the appearance of your document if you don't typeset it.

The chapters that follow explain how to modify some of these specifications from within the program. However, we advise against attempts at extensive modification of the specifications if you aren't extremely familiar with T<sub>E</sub>X and L<sup>A</sup>T<sub>E</sub>X. See *Typesetting Documents in Scientific WorkPlace and Scientific Word* for more information.

## Producing Documents without Typesetting

With Version 3 and higher of *SWP* and *SW*, you can produce your documents either with or without typesetting. In our documentation, we refer to the processes that don't involve typesetting as *preview* and *print*. These commands are available on the File menu and the Standard toolbar.

When you produce your document without typesetting it, the program sends the document directly to a non-L<sup>A</sup>T<sub>E</sub>X previewer or to the printer using many of the same routines with which it displays the document in the document window. Consequently, what you see in the preview window or in print is similar to what you see as you work on your document in the document window. (The program doesn't reflect the page setup specifications or the print options in the document window.)

The non-typeset appearance of your document depends on three sets of specifications, again all set initially by the document shell:

- The *style*, a collection of the specifications for the appearance of each tag in the document window and in print
- The *page setup specifications*
- The *print options*

The online Help and *Creating Documents with Scientific WorkPlace and Scientific Word* provide information about modifying these specifications from within the program. These three sets of specifications don't affect the typeset appearance of your document, although the style determines how the document appears on the screen when you're working on it.

## Understanding the Differences in the Final Product

Each time you produce your document in *SWP* or *SW*, you can choose whether or not to typeset it. The results differ noticeably.

If you typeset, the program uses  $\LaTeX$  or  $\text{PDF}\LaTeX$  to compile the document and generate any specified automatic elements such as front matter items (tables of contents or lists of figures and tables), cross-references, footnotes and margin notes, automatically numbered equations, indexes, and bibliographies.  $\LaTeX$  and  $\text{PDF}\LaTeX$  also provide hyphenation, kerning, ligatures, sophisticated paragraph and line breaking, and other automatic formatting features.

If you don't typeset, the program produces the document using many of the same routines it uses to display the document in the document window. No document elements are automatically generated, and the printed results are similar to what you see as you work on the document.

## Getting Help

In addition to the information available in the manuals supplied with your software, you can get information about the program from the online Help system, the library of reference materials about mathematics and science, and, if you have an Internet connection, the MacKichan Software website. If these resources don't contain the information you need, technical support is available. We also regularly make additional information available on our unmoderated discussion forum and email list. You can find an errata sheet for this book, as well as all other manuals published by MacKichan Software, Inc., at this URL:

<http://www.mackichan.com/techtalk/errata.html>

## Online Help

Without leaving the program, you can search the online Help system to find basic and advanced information about all available commands and operations, including those related to numeric, symbolic, and graphic computations. In particular, you can find additional material regarding  $\text{T}\text{E}\text{X}$ ,  $\LaTeX$ ,  $\text{L}\text{A}\text{T}\text{E}\text{X}$  packages, and other related topics. If you save copies of the Help documents in *SWP*, you can interact with the mathematics they contain, experimenting with or reworking the included examples. In addition, two programs—the Style Editor and the Document Manager—have their own online Help systems.

## Supplemental Technical Documents

We urge you to explore the supplemental technical documents supplied with the program. You can use the program to open, view, and print the documents. In particular, we urge you to read the following documents:

- In the `Help\general` directory, the document `50techref.tex`, which contains technical information on the features in Version 5.
- In the `Play` directory, the sample documents, which demonstrate the use of computation in *SWP*.
- In the `SWSamples` directory,
  - The sample documents, which illustrate the use of  $\LaTeX$  packages in *SWP* and *SW*.
  - The file `OptionsPackagesLaTeX.tex`, which describes and contains links to information about the options, packages, and other  $\TeX$ -related items provided with the program.
  - The file `BibTeXBibliographyStyles.tex`, which lists and describes the  $\text{Bib}\TeX$  style (`.bst`) files installed with the program.

## Obtaining Technical Support

If you can't find the answer to your questions in the manuals or the online Help, you can obtain technical support from our website at

**<http://www.mackichan.com/techtalk/knowledgebase.html>**

or at our Web-based Technical Support forum at

**<http://www.mackichan.com/techtalk/UserForums.htm>**

You can also contact our Technical Support staff by email, telephone, or fax. We urge you to submit questions by email whenever possible in case our technical staff needs to obtain your file to diagnose and solve the problem.

When you contact us by email or fax, please provide complete information about the problem you're trying to solve. We must be able to reproduce the problem exactly from your instructions. When you contact us by telephone, you should be sitting at your computer with the program running. Please provide the following information any time you contact Technical Support:

- The MacKichan Software product you have installed.
- The version and build numbers of your installation (see **Help / About**).
- The serial number of your installation (see **Help / System Features**).
- The version of the Windows system you're using.
- The type of hardware you're using, including network hardware.
- What happened and what you were doing when the problem occurred.
- The exact wording of any messages that appeared on your computer screen.

► **To contact technical support**

- Contact Technical Support by email, fax, or telephone between 8 A.M. and 5 P.M. Pacific Time:

**Internet email address: [support@mackichan.com](mailto:support@mackichan.com)**

**Fax: 360-394-6039**

**Telephone: 360-394-6033**

**Toll-free telephone: 877-SCI-WORD (877-724-9673)**

**Additional Information**

You can learn more on our website, which we update regularly to provide the latest technical information about the program. The site also houses links to other  $\TeX$  and  $\LaTeX$  resources. We maintain an unmoderated discussion forum and an unmoderated email list so our users can share information, discuss common problems, and contribute technical tips and solutions. You can link to these valuable resources from our home page at <http://www.mackichan.com>.

# 1 Using Document Shells

Every *SWP* and *SW* document is created from a template called a *document shell*. Each shell carries several sets of specifications that determine its fundamental structure and appearance. Those specifications, and the structure and appearance they define, extend to each new document you create with a given shell.

The program includes over 150 document shells that you can use to create books, exams, articles, reports, letters, theses, faxes, and other documents. The shells have the extension `.shl` and are in the `Shells` directory of your program installation.

Although many are similar, no two shells are exactly alike. Each is designed with a structure and components common to a certain kind of document, such as a book, report, article, or thesis. From shell to shell, the structure and components differ, depending on the purpose and anticipated content of the document and, in many cases, the typesetting requirements of the publisher. Choosing a shell carefully is an important step in developing your documents.

For much more information about working with document shells, refer to *Typesetting Documents in Scientific WorkPlace and Scientific Word* and *Creating Documents with Scientific WorkPlace and Scientific Word*.

## Understanding Document Shells

Each shell is associated with several sets of specifications. One set consists of page setup specifications, print options, and a style file with a `.cst` extension. These specifications determine the appearance of your document when you preview or print it without typesetting or when you display it in the document window. However, *these specifications have no effect on the typeset appearance of your document*.

The other set—the typesetting specifications—determine the document class and fundamental structure of the shell and may also specify one or more  $\LaTeX$  packages that provide a particular typesetting capability. The typesetting specifications govern all aspects of the typeset appearance of the shell and of any documents created with the shell. Typesetting specifications govern type face; type size; margins; page size; line spacing; location and appearance of headers and footers; paragraph layout and indentation; appearance and placement of section headings; page breaks; automatic generation of cross-references, table of contents, and other document elements; and other typographic details too numerous to mention. Most of the specifications are contained in  $\LaTeX$  formatting files with extensions of `.cls`, `.clo`, and `.sty`, although others may be contained in your document.  $\LaTeX$  and PDF $\LaTeX$  typeset your document based on this large collection of specifications.

---

**Note** Before Version 3.5, we held to convention, using the word *style* to refer to the typesetting specifications. However, convention has changed. In newer versions of L<sup>A</sup>T<sub>E</sub>X, the *document style* has been renamed the *document class*. We now use the word *style* to refer to the .cst file and not to the typesetting specifications.

---

When you open a new document, you select a document shell. The program opens a new document and copies the shell into it, along with the shell's typesetting specifications, style, page setup, and print options. Until you change it in some way, the new document is identical to the shell. It has the same class and structure, uses the same L<sup>A</sup>T<sub>E</sub>X packages, and produces the same appearance, with and without typesetting.

## L<sup>A</sup>T<sub>E</sub>X Document Classes

The document class named in the typesetting specifications determines the basic structure of the shell and of any documents you create with it. The class specifies the kind of document to be produced and defines its general structure as a book, report, article, or other kind of document. The class also determines the elements, environments, and constructs allowed in the document. Document class files have an extension of .cls.

About half of the shells provided with *SWP* and *SW* have standard L<sup>A</sup>T<sub>E</sub>X base classes; they are created with `book.cls`, `report.cls`, or `article.cls`. Although many of the other shells produce similar kinds of documents, they have different, more specialized base classes, as with the shells that produce articles formatted for a specific journal or theses formatted to meet the requirements of a particular university. The rest of the shells have the base class `sebase`; they were developed with the Style Editor. The program doesn't include a shell document for the standard L<sup>A</sup>T<sub>E</sub>X letter class.

## L<sup>A</sup>T<sub>E</sub>X Class Options

Although the document class defines a shell document in broad typesetting terms, L<sup>A</sup>T<sub>E</sub>X and PDFL<sup>A</sup>T<sub>E</sub>X need additional typesetting instructions to format a document completely. Some of these instructions come from document class options, a collection of formatting instructions that define typesetting in more detail. The options can control body text font size, page orientation, number of text columns, print quality, page size, and many other aspects of document design and typesetting.

The tables below show the default settings for `article.cls`, `book.cls`, and `report.cls`, the three base document classes used for most document shells in *SWP* and *SW*. The shell descriptions in this manual note any option settings that differ from the defaults. Accompanying the shell descriptions are page layout diagrams, which reflect the class option default settings. The notes keyed to the diagrams provide information about the size of the margins, headers, footers, text area, and margin notes, if any. Most measurements are given in points; a point is  $\frac{1}{72}$  inch.

If your document uses different settings, these page layouts may not apply. For example, if a document specifies a4 paper instead of 8.5x11 or two columns instead of one, the margins will differ from those shown in the layout diagrams. You may want to add the *layout* package to your document to generate a new layout diagram. For more information, refer to *Typesetting Documents in Scientific WorkPlace and Scientific Word*.

These class option defaults are in effect for document shells created with `article.cls`, `book.cls`, and `report.cls`, unless otherwise noted in the shell:

#### Class Option Defaults for Shells Created with `Article.cls`

Category	Default	Options
Body text point size	10 pt	11 pt, 12 pt
Paper size	8.5x11	a4, a5, b5, Legal size, Executive size
Orientation	Portrait	Landscape
Print side	One side	Both sides
Quality	Final	Draft
Title page	Title area on page 1	Title page
Columns	One	Two
Equation numbering	On right	On left
Displayed equations	Centered	Flush left
Bibliography style	Closed	Open
Babel language	English U.S.	See package documentation.

#### Class Option Defaults for Shells Created with `Book.cls`

Category	Default	Options
Body text point size	10 pt	11 pt, 12 pt
Paper size	8.5x11	a4, a5, b5, Legal size, Executive size
Orientation	Portrait	Landscape
Print side	Both sides	One side
Quality	Final	Draft
Title page	Title page	No title page
Columns	One	Two
Start chapter on left	No	Yes
Equation numbering	On right	On left
Displayed equations	Centered	Flush left
Open bibliography style	Closed	Open
Babel language	English U.S.	See package documentation.

#### Class Option Defaults for Shells Created with `Report.cls`

Category	Default	Options
Body text point size	10 pt	11 pt, 12 pt
Paper size	8.5x11	a4, a5, b5, Legal size, Executive size
Orientation	Portrait	Landscape
Print side	One side	Both sides
Quality	Final	Draft
Title page	Title page	No title page
Columns	One	Two
Start chapter on left	No	Yes
Equation numbering	On right	On left
Displayed equations	Centered	Flush left
Open bibliography style	Closed	Open
Babel language	English U.S.	See package documentation.

Default page layout for `report.cls`

## Other Document Classes

If you're using a shell based on a customized document class, the default categories and the corresponding options may differ. You can learn which document class options are in effect for a particular shell from the `Options and Packages` command on the `Typeset` menu, and you can view the page layout for the shell with the `layout` package.

## L<sup>A</sup>T<sub>E</sub>X Packages

The document class options establish a basic set of L<sup>A</sup>T<sub>E</sub>X typesetting instructions. L<sup>A</sup>T<sub>E</sub>X *packages*—sets of additional typesetting instructions—extend typesetting instructions by enabling some specific L<sup>A</sup>T<sub>E</sub>X behavior or customizing some aspect of the document appearance or production, such as the creation of an index, the special formatting of footnotes, the content and design of headers and footers, the style of numbered lists, or the generation of a list of symbols. Just as document classes have options, many packages have options with which you can customize document behavior still further. The options differ from package to package.

When you install the program, you automatically install those L<sup>A</sup>T<sub>E</sub>X packages that are included with the standard L<sup>A</sup>T<sub>E</sub>X distribution. The packages are installed in the `base`, `required`, and `AMS` subdirectories of the `TCITeX\TeX\LaTeX` directory. Also, the `TCITeX\TeX\LaTeX\contrib` directory of your installation includes a collection of packages that are particularly useful with *SWP* and *SW*. Most packages have an `.sty` file extension. *Typesetting Documents in Scientific WorkPlace and Scientific Word* describes the packages available with the program, and you can find links to additional and often extensive information about the packages in the online Help system.

You can add packages to your document in addition to those packages that have been specified for the shell. Documents created with most document shells—that is, documents in most document classes—can accept additional packages. The order in which the packages are specified can, on occasion, affect L<sup>A</sup>T<sub>E</sub>X behavior. The documentation notes when package order is significant.

## Choosing a Document Shell

Every *SWP* and *SW* document begins with a document shell. Choosing a shell carefully can save you time and frustration, especially if you expect to create a complex document. Keep your typesetting needs in mind as you look for an appropriate shell.

The program includes a large collection of shells for creating new documents in several categories. The categories are reflected in the shell directories:

- **Articles**—short documents intended for publication in scholarly journals or conference proceedings.
- **Author Packages for AMS**—articles intended for publication in journals or conference proceedings published by the American Mathematical Society (AMS).
- **Books**—large documents intended for publication as a separate volume.
- **Exams and Syllabi**—short documents intended for use in the classroom.
- **Other Documents**—miscellaneous document types including faxes, letters, memos, overhead transparencies, slides, and some books and reports, usually developed for earlier releases of the program.
- **Scientific Notebook**—documents created with *SNB*. Documents created with these shells are intended for printing without benefit of typesetting. These shells don't appear in this manual.
- **Standard LaTeX**—documents created with the L<sup>A</sup>T<sub>E</sub>X base document classes without the addition of any packages.
- **Style Editor**—documents created with shells developed using the Style Editor.
- **Theses**—documents that fulfill thesis formatting requirements at several universities.

Make sure the shell you choose produces the type of document you want to create. Don't attempt to write a book using a letter shell or an article using a report shell. Make sure that the shell contains the tags appropriate for your work. If you need theorem environments, for example, choose a shell that has theorem and theorem-like item tags. If you are unsure of your typesetting requirements, we urge you to choose the standard  $\LaTeX$  shell for the type of document you need. Standard  $\LaTeX$  shells provide the greatest flexibility and portability. You can achieve almost any typesetting effect by beginning with a standard shell and adding  $\LaTeX$  packages as necessary.

---

**Important** We strongly recommend that you begin all new documents using one of the standard  $\LaTeX$  shells, unless you have a compelling reason (such as publisher's instructions) to do otherwise.

---

In the following chapters, we provide information about the shells included with the program. For each shell, we note the document class and any packages used by the shell. We indicate whether the class and packages use option defaults or other settings. We also note when no class or package options are available from within the program. We include special information and brief instructions necessary for working with the shell, as well as cautions where necessary. You may find additional information in the document shell itself. Finally, we include pictures of representative pages from a typeset document created with the shell. (Note that a given sample document may not be the same as the document you see when you open the shell.)

We have excluded one category of documents from the manual—those created with *SNB* shells. Because the *SNB* shells are designed for printing without typesetting, we don't describe them here, nor do we provide illustrations of typeset sample documents for those shells. Documents created with *SNB* shells are similar in the document window and in print. Typesetting *SNB* documents may produce unexpected results because  $\LaTeX$  or PDF $\LaTeX$  may number sections and equations automatically, insert front matter, change the spacing, and otherwise attempt to change the formatting of the document. If you want to take advantage of typesetting for your *SWP* or *SW* document, choose a shell designed for typesetting instead of an *SNB* shell.

We encourage you to examine the shell samples in this manual carefully and take note of the features they illustrate. Notice details such as the absence or presence of headers and footers, the placement of page numbers and footnotes, the size of the margins, the appearance and placement of the headings, the extent of the front matter, the use of single or double columns, and the use of single or double spacing.

When you find a shell that looks appropriate, open and print a new document with the shell to see if it meets your requirements. The closer the shell fits your requirements, the easier your typesetting tasks will be.

► **To open a new document with a document shell**

1. On the Standard toolbar, click the New button  or, from the File menu, choose **New** to open the New dialog box.
2. From the **Shell Directories** list in the **New** dialog box, choose the kind of document you want.
3. From the **Shell Files** list, select the shell you want and choose **OK**.

# **Part I**

# **Gallery of Shell Documents**

## 2 Article Shells

Most article shells are based on the typesetting specifications set in the base document class `article.cls`, although some customized article shells use other `.cls` files. Generally, most article shells have front matter consisting of title and author information, a date, and an abstract. Some include tables of contents. Most shells include tags for up to five heading levels in the body of the article. Chapter headings are reserved for book and report shells. Some but not all articles contain tags for theorem environments. The back matter for most article shells includes appendices and bibliographies. Indices are reserved for books and reports.

See page 2 for information about base document class defaults and page 4 for page layout diagrams for the base document classes.

## A Simple MIT Press Article

### Document class base file: article.cls

Options and Packages	Defaults
Document class options	Body text 12 pt
Packages:	
mitpress	None

The shell produces documents similar to those created with the standard L<sup>A</sup>T<sub>E</sub>X article shell (see page 268) but differs in the design of the front matter. The shell prints the title in bold type, left justifies the title and author information, and omits the date.

**The Title of an Article**

Dr. Author Jones  
At this Address

Abstract

This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

**1 Sample Mathematics and Text**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**1.1 In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

1

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2 Mathematics in section heads**  $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3 Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

2

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_{\nu/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_{\nu/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

## 2 Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

### 2.1 Subsection Heading

This text appears under a subsection heading.

#### 2.1.1 Subsubsection Heading

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

## 3 Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.
  - (a) A numbered list item under a list item.  
The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
  - (b) Another numbered list item under a list item.
    - i. Third level numbered list item under a list item.  
A. Fourth and final level of numbered list items allowed.
- Bullet item 1.
- Bullet item 2.

## A An Appendix

Because appendices may contain material that is supplementary rather than integral to the main text, many styles use a different numbering system for equations that appear in the appendices.

$$\frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \tag{5}$$

The quadratic equation shown as equation 5 is used to demonstrate how equations are numbered in the appendix.

**ABSTRACT**

This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

*Subject headings:* globular clusters: general — globular clusters: individual (NGC 6397, NGC 6624, NGC 7078, Terzan 8)

**1. Sample Mathematics and Text**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**1.1. In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a non-expansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^+ \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  (1).

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2. Mathematics in section heads**  $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3. Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

---

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

- 3 -

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, \quad z \in \Gamma_\varepsilon, \quad (2)$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (3)$$

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^n d\lambda}{(\lambda - z)^2} + R(z), \quad (4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_{\varepsilon/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, \quad z \in \bar{\Gamma}_{\varepsilon/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

## 2. Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

### 2.1. Subsection Heading

This text appears under a subsection heading.

- 4 -

#### 2.1.1. Subsubsection Heading

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

## 3. Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
  2. Numbered list item 2.
    - (a) A numbered list item under a list item. The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
    - (b) Another numbered list item under a list item.
      1. Third level numbered list item under a list item.
        - A. Fourth and final level of numbered list items allowed.
- Bullet item 1.
  - Bullet item 2.
    - Second level bullet item.
    - Third level bullet item.
    - Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

- 5 -

## 4. About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as (4), (5) and (6). You can also have multiple citations appear together. Here is an example: (2; 3; 4).

**Key Words:** keywords: text should be lower case except as necessary for meaning.

**Insert header for classifications:** Use only if your journal has a subject classification requirement

1. SAMPLE MATHEMATICS AND TEXT

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section heading and three kinds of lists. Finally, the document includes entries for a normal bibliography and an appendix.

1.1. In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of B $\overline{\text{I}}\overline{\text{X}}\overline{\text{N}}$  parameters govern mathematical display.<sup>3</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

<sup>1</sup>First author thanks.

<sup>2</sup>Example of two authors at the same location.

<sup>3</sup>B $\overline{\text{I}}\overline{\text{X}}\overline{\text{N}}$  automatically selects the spacing depending on the surrounding line lengths.

1

A short line above:  $x^2 + y^2 = z^2$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2. Mathematics in section heads  $\int_0^1 \ln t dt$**

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3. Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**LEMMA 1.** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, \quad z \in \Gamma_\varepsilon. \tag{2}$$

*Proof.* Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \overline{\Gamma}_\varepsilon \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$|R(z)| \leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) = \frac{|z| + r}{r} O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|).$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, \quad z \in \overline{\Gamma}_\varepsilon/2,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

**Bunyip** Mythical beast of Australian Aboriginal legends.

3

## 4. ABOUT THE BIBLIOGRAPHY

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

### APPENDIX A: TITLE OF THE APPENDIX

The appendix should not contain material that is essential to the main text, but rather it should contain text that is helpful to a reader seeking further clarification. It can also contain explanations and elaborations that are too long for footnotes. The appendix or appendices should not be a repository for odds and ends that the author was unable to work into the body of his text.

Equations are sometimes numbered differently in an appendix, but they may not always be true:

$$\frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \quad (5)$$

The quadratic equation shown as equation 5 is used to see how equations are numbered in the appendix.

# Academic Press Journals - Modified

## Document class base file: apjrn.cls

Options and Packages	Defaults
Document class options	<i>Digital Signal Processing</i>
Packages:	
amsfonts	None

The shell provides typesetting specifications for articles intended for six scholarly journals published by Academic Press. The journals are listed in the shell and the applicable journal is selected as a document class option. Four of the journals produce double-column output. The format for one of the double-column journals, *Journal of Colloid and Interface Science*, is shown in the sample pages shown below. The journal *Digital Signal Processing*, has been selected as the default and is shown in the sample pages shown on the next page.

Front matter fields include title, author, address, date, and abstract. All author names appear in a single field. The shell uses an unusual method of entering author addresses. Fields in the body of the document hold keywords and subject classification, if required by the selected journal. See the shell for additional information.

The Title of an Article

Dr. Author Jones, Dr. Author Second and Dr. Author Third  
 \* University A, Department A, Remainder of Address, † University B, Department B, Remainder of Address  
 E-mail: firstauthor@univ.a.edu, secondauthor@univ.b.edu, thirdauthor@univ.a.edu

Version: Today's date

This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

**Key Words:** keywords; text should be lower case except as necessary for meaning.  
*Insert header for classification.* Use only if your journal has a subject classification requirement.

1. SAMPLE MATHEMATICS AND TEXT

This short sample document illustrates the typical appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

1.1. In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\tau_n = \sum_{k=1}^n (a_{n,k+1} - a_{n,k}) \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=1}^n a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  (1).

Two sets of BTEX parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$z^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

<sup>1</sup>BTEX automatically selects the spacing depending on the surrounding line lengths.

2. Mathematics in section heads  $f''$  in *ital*

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

1.3. Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

LEMMA 1. Let  $f(z)$  be an analytic function in  $C_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in C_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, \quad z \in \Gamma_\varepsilon. \tag{2}$$

*Proof.* Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in C_+ : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \bar{\Gamma}_\varepsilon$  and let  $C_\varepsilon(z) = \{\lambda \in C_+ : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$|R(z)| \leq r^{-1} \max_{\lambda \in C_\varepsilon(z)} o(|\lambda|) = r^{-1} \max_{\lambda \in C_\varepsilon(z)} |\lambda| \cdot O(|z| + r) = \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|).$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_\varepsilon$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, \quad z \in \bar{\Gamma}_\varepsilon/2,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

2. SECTION HEADINGS

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

2.1. Subsection Heading

This text appears under a subsection heading.

2.1.1. Subsubsection Heading

This text appears under a subsubsection heading.

Subsubsubsection Heading This text appears under a subsubsubsection heading.

3. LISTS

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.
- (a) A numbered list item under a list item.
- (b) Another numbered list item under a list item.
- (c) A fourth and final level of numbered list items allowed.
- Bullet item 1.
- Bullet item 2.
- Second level bullet item.
- Third level bullet item.

Fourth and final level bullet item.

**Description List.** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

4. ABOUT THE BIBLIOGRAPHY

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as (4), (5) and (6). You can also have multiple citations appear together. Here is an example: (2, 3, 4).

APPENDIX A: TITLE OF THE APPENDIX

The appendix should not contain material that is essential to the main text, but rather it should contain text that is helpful to a reader seeking further clarification. It can also contain explanations and elaborations that are too long for footnotes. The appendix or appendices should not be a depository for odds and ends that the author was unable to work into the body of his text.

Equations are sometimes numbered differently in an appendix, but his may not always be true.

$$\frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \tag{5}$$

The quadratic equation shown as equation 5 is used to see how equations are numbered in the appendix.

Version: Today's date

This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

**Key Words:** keywords: text should be lower case except as necessary for naming.

**Insert header for classifications:** Use only if your journal has a subject classification requirement

1. SAMPLE MATHEMATICS AND TEXT

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section heading and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

1.1. In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the line above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below:

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

1.2. Mathematics in section heads  $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

1.3. Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**LEMMA 1.** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_r = \{z \in \mathbb{C}_+ : 0 < \arg z \leq \pi - r\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \in \Gamma_r. \tag{2}$$

*Proof.* Change  $z$  for  $1/z$ . Then  $\Gamma_r \rightarrow \overline{\Gamma}_r = \{z \in \mathbb{C}_- : \pi \in \Gamma_r\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \overline{\Gamma}_r$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin r/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} O(|z| + r) = \frac{1 + \sin r}{\sin r} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_r/2$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_r/2,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

2. SECTION HEADINGS

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

2.1. Subsection Heading

This text appears under a subsection heading.

2.1.1. Subsubsection Heading

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

3. LISTS

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.
  - (a) A numbered list item under a list item.
 

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
  - (b) Another numbered list item under a list item.
    - i. Third level numbered list item under a list item.
      - A. Fourth and final level of numbered list items allowed.
        - Bullet item 1.
        - Bullet item 2.
      - Second level bullet item.
        - Third level bullet item.
        - Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

4. ABOUT THE BIBLIOGRAPHY

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

APPENDIX A: TITLE OF THE APPENDIX

The appendix should not contain material that is essential to the main text, but rather it should contain text that is helpful to a reader seeking further clarification. It can also contain explanations and elaborations that are too long for footnotes. The appendix or appendices should not be a depository for odds and ends that the author was unable to work into the body of his text.

Equations are sometimes numbered differently in an appendix, but his may not always be true.

$$\frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \tag{5}$$

The quadratic equation shown as equation 5 is used to see how equations are numbered in the appendix.

KEY WORDS sample mathematics, sample text

**Abstract**  
 This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

**1. Sample Mathematics and Text**  
 This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**1.1 In-line and Displayed Mathematics**  
 The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the

lines above or below are short or long, as shown in the following examples.  
 A short line above:  

$$x^2 + y^2 = z^2$$
 and a short line below.  
 A long line above may depend on your margins  

$$\sin^2 \theta + \cos^2 \theta = 1$$
 as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2 Mathematics in section heads**  
 $\int_a^b$  in *tdt*

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3 Theorems, Lemmata, and Other Theorem-like Environments**  
 A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_+ : z \in \overline{\Gamma}_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_+ : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) \\ &= r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) \\ &= \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1,$$

as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon/2$ .

that implies (2) by substituting  $1/z$  lack for  $z$ . ■

**2. Section Headings**  
 Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

**2.1 Subsection Heading**  
 This text appears under a subsection heading.  
*Subsubsection Heading* This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

**3. Lists**  
 Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.
  - (a) A numbered list item under a list item.

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.

- (b) Another numbered list item under a list item.
  - i. Third level numbered list item under a list item.
  - A. Fourth and final level of numbered list items allowed.

1. SAMPLE MATHEMATICS AND TEXT

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

1.1. In-line and Displayed Mathematics. The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$(1.1) \quad \sum_{i=1}^{\infty} a_i$$

is displayed and automatically numbered as equation 1.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of  $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$  parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

DR. AUTHOR JONES

2. Mathematics in section heads  $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$  in  $\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$ . Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

1.3. Theorems, Lemmata, and Other Theorem-Like Environments. A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1.** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_r = \{z \in \mathbb{C}_+ : 0 < \epsilon \leq \arg z \leq \pi - \epsilon\}$  then

$$(1.2) \quad a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, \quad z \in \Gamma_r.$$

*Proof.* Change  $z$  for  $1/z$ . Then  $\Gamma_r \rightarrow \overline{\Gamma}_r = \{z \in \mathbb{C}_- : \pi \in \Gamma_r\}$  and

$$(1.3) \quad f(1/z) = a_0 + a_1 z + o(z).$$

Fix  $z \in \overline{\Gamma}_r$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \epsilon/2$ . It follows from (1.3) that

$$(1.4) \quad \frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^n d\lambda}{(\lambda - z)^2} + R(z),$$

where for the remainder  $R(z)$  we have

$$|R(z)| \leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) = \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \epsilon}{\sin \epsilon} \cdot O(|z|).$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_r$ , and hence by the Cauchy theorem (1.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, \quad z \in \overline{\Gamma}_r/2,$$

that implies (1.2) by substituting  $1/z$  back for  $z$ . □

2. SECTION HEADINGS

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

2.1. Subsection Heading. This text appears under a subsection heading.

2.1.1. Subsubsection Heading. This text appears under a subsubsection heading. Subsubsubsection Heading. This text appears under a subsubsubsection heading. Subsubsubsubsection Heading. This text appears under a subsubsubsubsection heading.

SHORT TITLE 3

3. LISTS

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

- (1) Numbered list item 1.
  - (2) Numbered list item 2.
    - (a) A numbered list item under a list item.
- The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
- (b) Another numbered list item under a list item.
    - (i) Third level numbered list item under a list item.
      - (A) Fourth and final level of numbered list items allowed.
- Bullet item 1.
  - Bullet item 2.
    - Second level bullet item.
      - \* Third level bullet item.
      - Fourth and final level bullet item.

**Description List:** Each description list item has a lead-in followed by the item. Double-click the lead-in to enter or customize the text of the lead-in.

**Bunyip:** Mythical beast of Australian Aboriginal legends.

4. TAGS

You can apply the logical markup tag *Emphasized*. You can apply the visual markup tags **Bold**, *Italics*, Roman, *Sans Serif*, *Slanted*, **SMALL CAPS**, and **Typewriter**.

You can apply the special, mathematics only tags **BLACKBOARD BOLD**, *CALIGRAPHIC*, and *Fraktur*. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

You can apply the size tags *very, scriptsize, footnotesize, small, normalsize, large, Large, LARGE, huge* and *Huge*.

The *Long Quotation* tag is used for quotations of more than one paragraph. Following is the beginning of *Alice's Adventures in Wonderland* by Lewis Carroll:

Alice was beginning to get very tired of sitting by her sister on the bank, and of having nothing to do: once or twice she had peeped into the book her sister was reading, but it had no pictures or conversations in it, 'and what is the use of a book,' thought Alice 'without pictures or conversation?' So she was considering in her own mind (as well as she could, for the hot day made her feel very sleepy and stupid), whether the pleasure of making a daisy-chain would be worth the trouble of getting up and picking the daisies, when suddenly a White Rabbit with pink eyes ran close by her. There was nothing so very remarkable in that; nor did Alice think it so very much out of the way to hear the Rabbit say to itself, 'Oh dear! Oh dear! I shall be late!' (when she thought it

DR. AUTHOR JONES 4

over afterwards, it occurred to her that she ought to have wondered at this, but at the time it all seemed quite natural); but when the Rabbit actually took a watch out of its waistcoat-pocket, and looked at it, and then hurried on, Alice started to her feet, for it flashed across her mind that she had never before seen a rabbit with either a waistcoat-pocket, or a watch to take out of it, and burning with curiosity, she ran across the field after it, and fortunately was just in time to see it pop down a large rabbit-hole under the hedge. In another moment down went Alice after it, never once considering how in the world she was to get out again.

5. ABOUT THE BIBLIOGRAPHY

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

APPENDIX A. AN APPENDIX

Because appendices may contain material that is supplementary rather than integral to the main text, many styles use a different numbering system for equations that appear in the appendices.

$$(A.1) \quad \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

The quadratic equation shown as equation A.1 is used to demonstrate how equations are numbered in the appendix.

## AMS Proceedings Article

## Document class base file: amsproc.cls

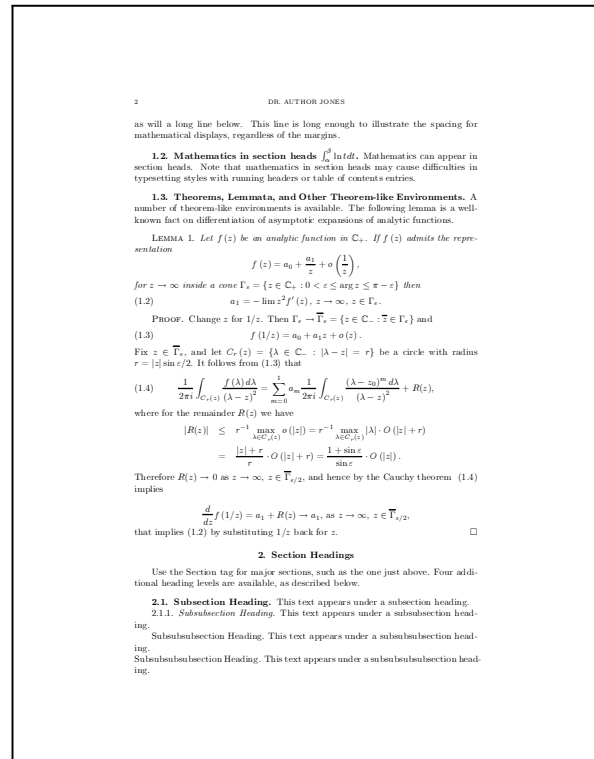

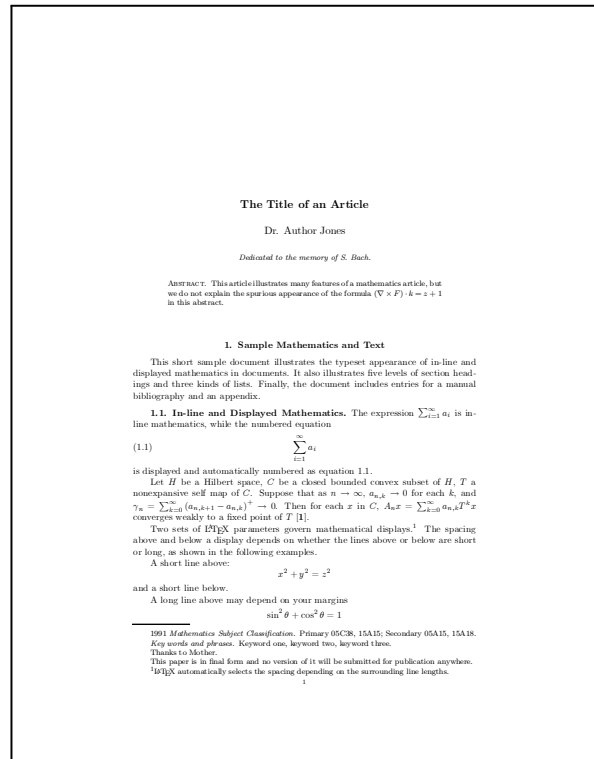

Options and Packages Defaults

Document class options Standard

Packages:

None

The shell is an  $\mathcal{A}\mathcal{M}\mathcal{S}\text{-}\mathcal{L}\mathcal{A}\mathcal{T}\mathcal{E}\mathcal{X}$  typesetting specification intended for the preparation of articles to appear in AMS proceedings. The extensive front matter includes fields for full and short title, address, email address, URL address, thanks, dedication, and key words.

SHORT TITLE

3

### 3. Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

- (1) Numbered list item 1.
- (2) Numbered list item 2.
  - (a) A numbered list item under a list item.
  - (b) Another numbered list item under a list item.
    - (3) Third level numbered list item under a list item.
      - (A) Fourth and final level of numbered list items allowed.
- Bullet item 1.
- Bullet item 2.
  - Second level bullet item.
    - \* Third level bullet item.
      - Fourth and final level bullet item.

**Description List:** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip:** Mythical beast of Australian Aboriginal legends.

### 4. Tags

You can apply the logical markup tag *Emphasized*. You can apply the visual markup tags **Bold**, *Italic*, Roman, **Sans Serif**, *Slanted*, **SMALL CAPS**, and **Typewriter**.

You can apply the special, mathematics only, tags **BLACKBOARD BOLD**, *CALIGRAPHIC*, and *fontserif*. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

You can apply the size tags *tiny*, *scriptsize*, *footnotesize*, *small*, *normalsize*, *large*, *Large*, **LARGE**, *huge* and **HUGE**.

The *Long Quotation* tag is used for quotations of more than one paragraph. Following is the beginning of *Alice's Adventures in Wonderland* by Lewis Carroll:

Alice was beginning to get very tired of sitting by her sister on the bank, and of having nothing to do: once or twice she had peeped into the book her sister was reading, but it had no pictures or conversations in it, 'and what is the use of a book,' thought Alice 'without pictures or conversation?'

So she was considering in her own mind (as well as she could, for the hot day made her feel very sleepy and stupid), whether the pleasure of making a daisy-chain would be worth the trouble of getting up and picking the daisies, when suddenly a White Rabbit with pink eyes ran close by her.

There was nothing so very remarkable in that; nor did Alice think it so very much out of the way to hear the Rabbit say to itself, 'Oh dear! Oh dear! I shall be late!' (when she thought it

4

DR. AUTHOR JONES

over afterwards, it occurred to her that she ought to have wondered at this, but at the time it all seemed quite natural); but when the Rabbit actually took a watch out of its waistcoat-pocket, and looked at it, and then hurried on, Alice started to her feet, for it flashed across her mind that she had never before seen a rabbit with either a waistcoat-pocket, or a watch to take out of it, and burning with curiosity, she ran across the field after it, and fortunately was just in time to see it pop down a large rabbit-hole under the hedge. In another moment down went Alice after it, never once considering how in the world she was to get out again.

### 5. About the Bibliography

Following the text of this article is a short manual bibliography. This simple bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

The shell produces documents whose characteristics are similar to those found in astronomy and astrophysics journals.

**The Title of an Article**

Dr. Author Jones  
At this Address

Received: \_\_\_\_\_ Accepted: \_\_\_\_\_

**Abstract**

This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

**1. Sample Mathematics and Text**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**1.1 In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a non-expansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^+ \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  (1).

1

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2 Mathematics in section heads**  $\int_{\alpha}^{\beta} \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3 Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+; 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{2}$$

<sup>1</sup> L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

2

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \overline{z} \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (3)$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_\varepsilon(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^1 a_n \frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{(\lambda - z_0)^n d\lambda}{(\lambda - z)^2} + R(z), \quad (4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_\varepsilon(z)} o(|z|) = r^{-1} \max_{\lambda \in C_\varepsilon(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_{\varepsilon/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_{\varepsilon/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

## 2. Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

### 2.1 Subsection Heading

This text appears under a subsection heading.

#### 2.1.1 Subsubsection Heading

This text appears under a subsubsection heading.

3

**Subsubsection Heading** This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

## 3. Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.
  - (a) A numbered list item under a list item.
 

The typeset appearance for this level is often different from the screen appearance.

The typeset appearance often uses parentheses around the level indicator.
  - (b) Another numbered list item under a list item.
    - i. Third level numbered list item under a list item.
 

A. Fourth and final level of numbered list items allowed.
- Bullet item 1.
- Bullet item 2.
  - Second level bullet item.
  - \* Third level bullet item.
  - Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item.

Double-click the lead-in box to enter or customize the text of the lead-in.

4

**Bunyip** Mythical beast of Australian Aboriginal legends.

## 4. About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as (4), (5) and (6). You can also have multiple citations appear together. Here is an example: (2, 3, 4).

### A An Appendix

Because appendices may contain material that is supplementary rather than integral to the main text, many styles use a different numbering system for equations that appear in the appendices.

$$\frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \quad (5)$$

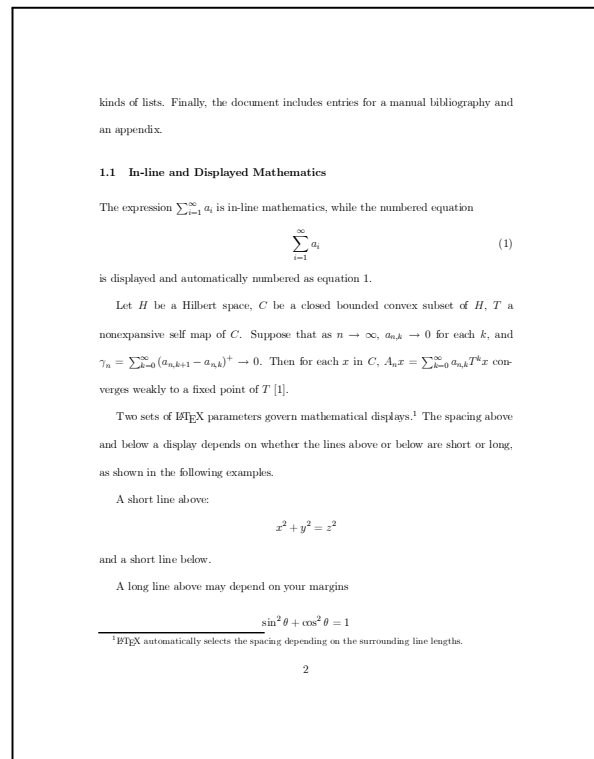

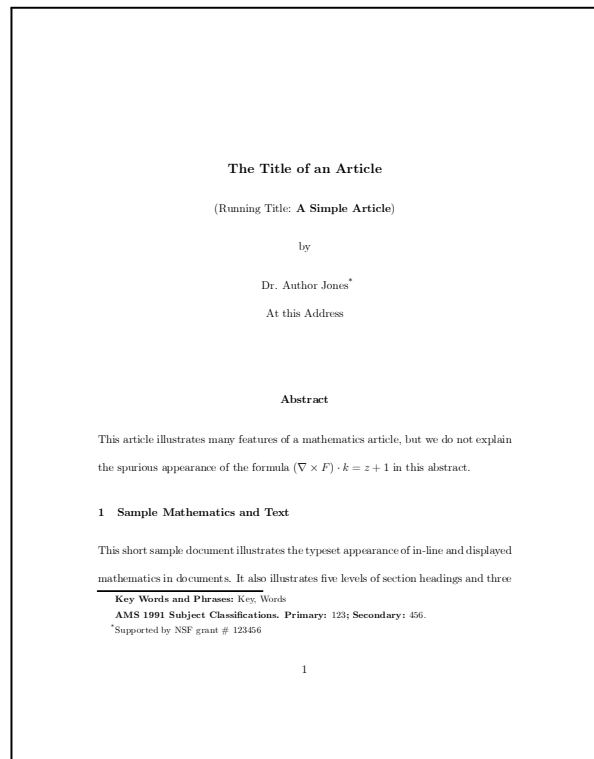

The quadratic equation shown as equation 5 is used to demonstrate how equations are numbered in the appendix.

5

**Annals of Statistics-Draft****Document class base file: article.cls**

Options and Packages	Defaults
Document class options	Body text 12 pt
Packages:	
sw20dft1	None

The shell is intended for preparing drafts of papers to be submitted to the *Annals of Statistics*. The shell produces documents with wide margins and double spacing so that referees and editors have room to write comments; it doesn't produce camera-ready documents. The front matter includes fields for a running title, primary and secondary classes, and key words.

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

### 1.2 Mathematics in section heads $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

### 1.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \in \Gamma_\varepsilon. \quad (2)$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (3)$$

3

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 \frac{a_m}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \quad (4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_{\varepsilon/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, \quad z \in \bar{\Gamma}_{\varepsilon/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

## 2 Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

### 2.1 Subsection Heading

This text appears under a subsection heading.

4

You can apply the special, mathematics only, tags `BLACKBOARD BOLD`, `CALLIGRAPHIC`, and `fraktur`. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

Following is a group of paragraphs marked as Short Quote. This environment is appropriate for a short quotation or a sequence of short quotations.

The buck stops here. *Harry Truman*

I am not a crook. *Richard Nixon*

They underestimated me. *George W. Bush*

## 5 About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

# ASAE Transactions

## Document class base file: asaetr.cls

Options and Packages	Defaults
Document class options	Standard
Packages:	
None	

This shell produces documents appropriate for submission to the *ASAE Transactions*. A special macro (`drop`) defined for the shell typesets a large character at the beginning of a paragraph, with subsequent text wrapped around the character. The macro is best used in *SWP* and *SW* as an encapsulated TeX field so the drop letter can be viewed. See the shell for detailed information. Note that more material fits on double-column pages than on single-column pages.

THE TITLE OF AN ARTICLE\*

Dr. Author Jones<sup>†</sup>      J. D. McCauley<sup>‡</sup>  
STUDENT MEMBER  
ASAE

The Date

**ABSTRACT**  
This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot \delta = z + 1$  in this abstract.

**SAMPLE MATHEMATICS AND TEXT**  
This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**IN-LINE AND DISPLAYED MATHEMATICS**  
The expression  $\sum_{k=1}^{\infty} a_k$  is in-line mathematics, while the numbered equation 
$$\sum_{k=1}^{\infty} a_k \tag{1}$$
 is displayed and automatically numbered as equation 1. Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_n \rightarrow 0$  for each  $k$ , and  $\|y_n - \sum_{k=1}^n (a_{n,k} T^k - a_{n,k})\| \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=1}^n a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1]. Two sets of IFIX parameters govern mathematical displays. The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.  
A short line above:  $x^2 + y^2 = z^2$   
and a short line below:

\*Written for presentation at the 1992 International Winter-Meeting of ASAE.  
<sup>†</sup>American employee of MacKichan Software, Inc.  
<sup>‡</sup>UMDA Fellow, Department of Agricultural Engineering, Purdue University; Formerly, Graduate Assistant-Research, Department of Agricultural Engineering, Texas A&M University, (Wheatstam, etc).  
<sup>§</sup>IFIX automatically selects the spacing depending on the surrounding line lengths.

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{T}_{1/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{T}_{1/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

**INFORMATION ABOUT THIS SHELL**  
The shell document contains detailed information about using various features including the front matter and the section headings. In particular, the document includes a caution about using fourth-level headings. Additional information includes helpful hints about using certain packages to simplify working with figures and tables. Captions should be placed under figures. Tables can contain footnotes if the minipage environment is used.

**SECTION HEADINGS**  
Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

**SUBSECTION HEADING**  
This text appears under a subsection heading.

**SUBSUBSECTION HEADING**  
This text appears under a subsubsection heading.

**SUBSUBSUBSECTION HEADING** This text appears under a subsubsubsubsection heading.

**LISTS**  
Bulleted, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.

(a) A numbered list item under a list item.  
The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.

(b) Another numbered list item under a list item.

1. Third level numbered list item under a list item.

A. Fourth and final level of numbered list items allowed.

- Bullet item 1.
- Bullet item 2.

- Second level bullet item.
- \* Third level bullet item.
- Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

**TAGS**  
You can apply the logical markup tag *Emphasized*. You can apply the visual markup tags **Bold**, *Italic*, Roman, Sans Serif, *Slanted*, SMALL CAPS, and *Typewriter*. You can apply the special, mathematics only, tags **BLACKBOARD BOLD**, *CALIGRAPHIC*, and *fraktur*. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z. You can apply the size tags *xx-small*, *x-small*, *small*, *normal-size*, *large*, *Large*, **LARGE**, *huge* and **Huge**. Following is a group of paragraphs marked as Short Quote. This environment is appropriate for a short quotation or a sequence of short quotations.

The buck stops here, *Harry Truman*  
Ask not what your country can do for you; ask what you can do for your country. *John F. Kennedy*  
I am not a crook. *Richard Nixon*  
It's no exaggeration to say the undecideds could go one way or another. *George Bush*  
I did not have sexual relations with that woman, Miss Lewinsky. *Bill Clinton*  
They misunderrated me. *George W. Bush*

The Long Quotation tag is used for quotations of more than one paragraph. Following is the beginning of *Alice's Adventures in Wonderland* by Lewis Carroll:

Alice was beginning to get very tired of sitting by her sister on the bank, and of having nothing to do: once or twice she had peeped into the book her sister was reading, but it had no pictures or

conversations in it, 'and what is the use of a book,' thought Alice 'without pictures or conversation?'

So she was considering in her own mind (as well as she could, for the hot day made her feel very sleepy and stupid), whether the pleasure of making a daisy-chain would be worth the trouble of getting up and picking the daisies, when suddenly a White Rabbit with pink eyes ran close by her.

There was nothing so very remarkable in that; nor did Alice think it so very much out of the way to hear the Rabbit say to itself, 'Oh dear! Oh dear! I shall be late!' (when she thought it over afterwards, it occurred to her that she ought to have wondered at this, but at the time it all seemed quite natural); but when the Rabbit actually took a watch out of its waistcoat-pocket, and looked at it, and then hurried on, Alice started to her feet, for it flashed across her mind that she had never before seen a rabbit with either a waistcoat-pocket, or a watch to take out of it, and burning with curiosity, she ran across the field after it, and fortunately was just in time to see it pop down a large rabbit-hole under the hedge.

In another moment down went Alice after it, never once considering how in the world she was to get out again.

**ABOUT THE BIBLIOGRAPHY**

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [6] and [7]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

$\LaTeX$  automatically generates the "References" section of your paper from an external database. Style files govern the appearance of your "References" section. In principle, you could change a paper, which met the requirements of one professional society, to that of another by simply changing the style file that you use. The style file `asatrx.lat` (for ASAE) is currently being developed. Other style files exist for IEEE, ACM, APA, etc.

To use  $\LaTeX$ , you normally process your file with  $\TeX$ , then with  $\LaTeX$ , then twice more with  $\TeX$ . The  $\LaTeX$  style file, which is unfinished, comes close to the citation style used by ASAE. You may have to edit some entries by hand. To do this, edit the `*.bib` file after you have processed the file with  $\TeX$ . See Appendix B in [5] (Lampert, 1986) for more information about  $\LaTeX$ .

The Title of an Article

Dr. Author Jones  
At this Address

**Abstract**  
This article illustrates many features of a mathematical article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

**Sample Mathematics and Text**  
This short simple document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**In-line and Displayed Mathematics**  
The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^+ \rightarrow 0$ . Then for each  $x$  in

$$C, A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$$

converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

$$\sin^2 \theta + \cos^2 \theta = 1$$

As will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**Mathematics in section heads**  $f^{\beta} \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

Jones

**Theorems, Lemmata, and Other Theorem-like Environments**  
A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \in \Gamma_\varepsilon. \tag{2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) \\ &= r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) \\ &= \frac{1 + \sin \varepsilon}{\sin \varepsilon} O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_\varepsilon / 2$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \bar{\Gamma}_\varepsilon / 2,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

**Section Headings**  
Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

**Subsection Heading**  
This text appears under a subsection heading.

**Subsubsection Heading**  
This text appears under a subsubsection heading.

**Subsubsubsection Heading**  
This text appears under a subsubsubsection heading.

**Lists**  
Bulleted, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.
  - (a) A numbered list item under a list item.
 

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
  - (b) Another numbered list item under a list item.
    - i. Third level numbered list item under a list item.
      - A. Fourth and final level of numbered list items allowed.

- Bullet item 1.
- Bullet item 2.
  - Second level bulleted item.

Jones

- \* Third level bullet item.
- Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

**About the Bibliography**

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

## 1. Sample Mathematics and Text

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

## 1.1. In-line and Displayed Mathematics

The expression  $\sum_{i=1}^n a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^n a_i \quad (1)$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ .

Two sets of  $\text{BIP}_2\text{X}$  parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

<sup>1</sup> Read offprint requests to: G. Wüchertel  
\* Just to show the usage of the elements in the author field.  
\*\* The university of heaven temporarily does not accept e-mail.

<sup>1</sup>  $\text{BIP}_2\text{X}$  automatically selects the spacing depending on the surrounding line lengths.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below:

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as well a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

1.2. Mathematics in section heads  $\int_0^1 \ln t dt$ 

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

## 1.3. Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1.** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_r = \{z \in \mathbb{C}_+ : 0 < z \leq \arg z \leq \pi - \epsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_r. \quad (2)$$

Running author, or delete: Running title, or delete

*Proof.* Change  $z$  for  $1/z$ . Then  $\Gamma_r \rightarrow \bar{\Gamma}_r = \{z \in \mathbb{C}_+ : \bar{z} \in \Gamma_r\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (3)$$

Fix  $z \in \bar{\Gamma}_r$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_+ : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \epsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \quad (4)$$

where for the remainder  $R(z)$  we have

$$|R(z)| \leq r^{-1} \max_{\lambda \in C_r(z)} |o(\lambda)| = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) = \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \epsilon}{\sin \epsilon} \cdot O(|z|).$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_r/2$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad z \rightarrow \infty, z \in \bar{\Gamma}_r/2,$$

that implies (2) by substituting  $1/z$  back for  $z$ .

## 2. Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

## 2.1. Subsection Heading

This text appears under a subsection heading.

## 2.1.1. Subsubsection Heading

This text appears under a subsubsection heading.

Subsubsubsection Heading This text appears under a subsubsubsection heading.

(Subsubsubsubsubsection head:Subsubsubsubsubsection

Heading This text appears under a subsubsubsubsubsection heading.

## 3. Lists

Bulleted, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.

- (a) A numbered list item under a list item. The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
- (b) Another numbered list item under a list item.
  - i. Third level numbered list item under a list item.

**The Title of an Article**  
 Dr. Author Jones  
 At this Address

ABSTRACT: This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times \vec{F}) \cdot \vec{k} = z + 1$  in this abstract.

1 Sample Mathematics and Text

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

1.1 In-line and Displayed Mathematics

The expression  $\sum_{k=1}^{\infty} a_k$  is in-line mathematics, while the numbered equation

$$\sum_{k=1}^{\infty} a_k \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ <sup>[1]</sup>.

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line length.

2 Mathematics in section heads  $\int_0^1 \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) \\ &= r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) \\ &= \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_{\varepsilon/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad z \rightarrow \infty, z \in \bar{\Gamma}_{\varepsilon/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

2 Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

2.1 Subsection Heading

This text appears under a subsection heading.

2.1.1 Subsubsection Heading

This text appears under a subsubsection heading.

**Subsubsection Heading**

This text appears under a subsubsection heading.

**Subsubsubsection Heading**

This text appears under a subsubsubsection heading.

3 Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.
  - (a) A numbered list item under a list item. The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
  - (b) Another numbered list item under a list item.
    - i. Third level numbered list item under a list item.
      - A. Fourth and final level of numbered list items allowed.

- Bullet item 1.
- Bullet item 2.

– Second level bullet item.  
 \* Third level bullet item.  
 • Fourth and final level bullet item.

**Description List**

Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip**

Mythical beast of Australian Aboriginal legends.

3.1 Tags

You can apply the logical markup tag *Emphasized*. You can apply the visual markup tags **Bold**, *Italics*, Roman, Sans Serif, Slanted, SMALL CAPS, and **Typewriter**.

You can apply the special mathematics only tags **BACKBOARD BOLD**, *CALIGRAPHIC*, and **fraktur**. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

You can apply the size tags *tiny*, *scriptsize*, *footnote-size*, *small*, *normalize*, *large*, *Large*, **LARGE**, **huge** and **Huge**.

Following is a group of paragraphs marked as Short Quote. This environment is appropriate for a short quotation or a sequence of short quotations.

The buck stops here. *Harry Truman*  
 Ask not what your country can do for you; ask what you can do for your country. *John F. Kennedy*  
 I am not a crook. *Richard Nixon*  
 It's no exaggeration to say the unexcused could go one way or another. *George H. W. Bush*

I did not have sexual relations with that woman, Miss Lewinsky. *Bill Clinton*  
They misunferestimated me. George  
W. Bush

The Long Quotation tag is used for quotations of more than one paragraph. Following is the beginning of *Alice's Adventures in Wonderland* by Lewis Carroll:

Alice was beginning to get very tired of sitting by her sister on the bank, and of having nothing to do: once or twice she had peeped into the book her sister was reading, but it had no pictures or conversations in it, and what is the use of a book, thought Alice, without pictures or conversation?

So she was considering in her own mind (as well as she could, for the last day made her feel very sleepy and stupid), whether the pleasure of making a daisy-chain would be worth the trouble of getting up and picking the daisies, when suddenly a White Rabbit with pink eyes ran close by her.

There was nothing so very remarkable in that; nor did Alice think it so very much out of the way to hear the Rabbit say to itself, "Oh dear! Oh dear! I shall be late!" (when she thought it over afterwards, it occurred to her that she ought to have wondered at this, but at the time it all seemed quite natural); but when the Rabbit actually took a watch out of its waistcoat-pocket, and looked at it, and then hurried on, Alice started to her feet, for it flashed across her mind that she had never before seen a rabbit with either a waistcoat-pocket, or a watch to take out of it, and burning with curiosity, she ran across the field after it, and fortunately was just in time to see it pop down a large rabbit-hole under the hedge.

In another moment down went Alice after it, never once considering how in the world she was to get out again.

Use the Verbatim tag when you want L<sup>A</sup>T<sub>E</sub>X to preserve spacing, perhaps when including a fragment from a program such as:

```
#include <iostream>
void main(void)
{
    cout << "Hello World.";
}
```

#### 4 About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

**The Title of an Article**

Dr. Author Jones  
At this Address

**Abstract**

This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

**Sample Mathematics and Text**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the unnumbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of  $\LaTeX$  parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

---

<sup>1</sup> $\LaTeX$  automatically selects the spacing depending on the surrounding line lengths.

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_{1/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_{1/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

**Section Headings**

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

**Subsection Heading**  
This text appears under a subsection heading.

*Subsubsection Heading*  
This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Lists**

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.
  - (a) A numbered list item under a list item.
 

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
  - (b) Another numbered list item under a list item.
    - i. Third level numbered list item under a list item.
      - A. Fourth and final level of numbered list items allowed.

- Bullet item 1.
- Bullet item 2.
  - Second level bullet item.
  - Third level bullet item.
  - Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

**Tags**

You can apply the logical markup tag *Emphasized*. You can apply the visual markup tags **Bold**, *Italics*, Roman, Sans Serif, *Slanted*, SMALL CAPS, and Typewriter.

You can apply the special, mathematics only, tags BLACKBOARD BOLD, *CALCULOGRAPHIC*, and fraktur. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

You can apply the size tags *small*, *scriptsize*, *footnotesize*, *small*, *normalsize*, *large*, *Large*, *LARGE*, *huge* and *Huge*.

Following is a group of paragraphs marked as Short Quote. This environment is appropriate for a short quotation or a sequence of short quotations.

The back stops here. *Harry Truman*

Ask not what your country can do for you; ask what you can do for your country. *John F. Kennedy*

I am not a crook. *Richard Nixon*

It's no exaggeration to say the undecideds could go one way or another. *George H. W. Bush*

I did not have sexual relations with that woman, Miss Lewinsky. *Bill Clinton*

They miscalculated me. *George W. Bush*

The Long Quotation tag is used for quotations of more than one paragraph. Following is the beginning of *Alice's Adventures in Wonderland* by Lewis Carroll:

Alice was beginning to get very tired of sitting by her sister on the bank, and of having nothing to do: once or twice she had peeped into the book her sister was reading, but it had no pictures or conversations in it, 'and what is the use of a book,' thought Alice 'without pictures or conversation?'

So she was considering in her own mind (as well as she could, for the hot day made her feel very sleepy and stupid), whether the pleasure of making a daisy-chain would be worth the trouble of getting up and picking the daisies, when suddenly a White Rabbit with pink eyes ran close by her.

There was nothing so very remarkable in that; nor did Alice think it so very much out of the way to hear the Rabbit say to itself, 'Oh dear! Oh dear! I shall be late!' 'When she thought it over afterwards, it occurred to her that she ought to have wondered at this, but at the time it all seemed quite natural; but when the Rabbit actually took a watch out of its waistcoat-pocket, and looked at it, and then hurried on, Alice started to her feet, for it flashed across her mind that

she had never before seen a rabbit with either a sensitive pocket, or a watch to take out, and burning with curiosity, she ran across the field after it, and fortunately was just in time to see it pop down a large rabbit-hole under the hedge.

In another moment down went Alice after it, never once considering how in the world she was to get out again.

Use the Verbatim tag when you want L<sup>A</sup>T<sub>E</sub>X to preserve spacing, perhaps when including a fragment from a program such as:

```
#include <iostream>
void main(void)
{
    cout << "Hello World.";
}
```

#### Excerpt From Original DECUS Documentation

The DECUS Proceedings, like the conference proceedings of many other organizations, is rushed to publication as quickly as possible so that the material will reach the conference participants and other interested readers before its value is diminished by time. Reproducing author-prepared copy eliminates the considerable bother and expense of typesetting, proofreading and corrections. The published document should be compact, uniform in appearance, and readable, regardless of the kind or quality of printing device available to the author. For these reasons, instructions to authors have heretofore assumed that nothing more elaborate is available than an ordinary typewriter or dot matrix printer.

To enforce uniformity, the author is provided with "model paper", on which are printed (in non-reproducing ink) column and page borders, alignment marks, and instructions for placement of title, author, and the other parts of a proceedings article. The dimensions of the model paper are almost always larger than those of the published Proceedings — this permits more text to be packed onto each page, and also improves its appearance or "quality" when photographically reduced, smoothing out the rough edges of letters and symbols generated by a typewriter, dot-matrix printer or other "low-resolution" device.

Within the past few years, advances in laser-printer technology have made good-quality output accessible to a growing number of users, through a widening selection of low-cost output systems based on print engines with 300 dot-per-inch resolution and (relatively) easy-to-use interfaces. Such devices have been attached to most kinds of DEC computers, and drivers now exist to print the output from such programs as Scribe, TeX and Troff. Most low-end laser printers cannot use paper wider than 8 1/2", however, so even if both a good composition program and output printer had been available, until now an author would have been discouraged from using them for mechanical reasons.

#### About the Bibliography

Following the text of this article is a short manual bibliography. This simple bibliography has no relationship to the previous text, but it shows simple citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

#### An Appendix

Because appendices may contain material that is supplementary rather than integral to the main text, many styles use a different numbering system for equations that appear in the appendices.

$$-b \pm \sqrt{b^2 - 4ac} \quad (5)$$

The quadratic equation shown as equation 5 is used to demonstrate how equations are numbered in the appendix.

The Title of an Article

Dr. Author Jones  
At this Address

The Date

**Abstract**

This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

**1 Sample Mathematics and Text**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**1.1 In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=1}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

---

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

1

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2 Mathematics in section heads**  $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3 Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

2

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\mathbb{T}}_{1/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\mathbb{T}}_{1/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

## 2 Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

### 2.1 Subsection Heading

This text appears under a subsection heading.

#### 2.1.1 Subsubsection Heading

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

## 3 Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.
  - (a) A numbered list item under a list item.
 

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
  - (b) Another numbered list item under a list item.
    - i. Third level numbered list item under a list item.
    - A. Fourth and final level of numbered list items allowed.

3

- Bullet item 1.
- Bullet item 2.
  - Second level bullet item.
  - + Third level bullet item.
  - Fourth and final level bullet item.

The Title of an Article

Dr. Author Jones<sup>a</sup>, R. de Maas<sup>a†</sup>, X.-Y. Wang<sup>b</sup> and A. Sheffield<sup>d‡</sup>

<sup>a</sup>Mathematics and Computer Science Division, Elsevier Science Publishers B.V., P.O. Box 103, 1000 AC Amsterdam, The Netherlands

<sup>b</sup>Economics Department, University of Winchester, 2 Finch Road, Winchester, Hampshire P3L 1T9, United Kingdom

This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

**1. Sample Mathematics and Text**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**1.1. In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a non-expansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>4</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

<sup>†</sup>Footnotes should appear on the first page only to indicate your present address (if different from your normal address), research grant, sponsoring agency, etc. These are obtained with the `\thanks` command. For following authors with the same address use the `\addressmark` command.

<sup>‡</sup>To reuse an addressmark later on, label the address with an optional argument to the `\address` command, e.g. `\address{BOS}`, and repeat the label as the optional argument to the `\addressmark` command, e.g. `\addressmark{BOS}`.

<sup>4</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

2

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2. Mathematics in section heads** *f<sup>2</sup> ln tdt*

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3. Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : |\arg z| \leq \varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_\varepsilon(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} \frac{a_m}{2\pi i} \int_{C_\varepsilon(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_\varepsilon(z)} o(|z|) = r^{-1} \max_{\lambda \in C_\varepsilon(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon/2,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

The Title of an Article

Dr. Author Jones<sup>a</sup>, R. de Maas<sup>b</sup>, X.-Y. Wang<sup>c</sup> and A. Sheffield<sup>d</sup>

<sup>a</sup>Mathematics and Computer Science Division, Elsevier Science Publishers B.V., P.O. Box 103, 1000 AC Amsterdam, The Netherlands

<sup>b</sup>Economics Department, University of Winchester, 2 Finch Road, Winchester, Hampshire PSL T19, United Kingdom

**1. Sample Mathematics and Text**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**1.1. In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^n a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^n a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $\alpha_{n,k} = 0$  for each  $k$ , and  $\tau_n = \sum_{k=1}^n (\alpha_{n,k+1} - \alpha_{n,k})^2 = 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=1}^n \alpha_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>4</sup> The spacing above and below

<sup>4</sup>Footnotes should appear on the first page only to indicate your present address (if different from your normal address), research grant, sponsoring agency, etc. These are obtained with the `\thanks` command.

<sup>5</sup>The following authors with the same address use the `\addressmark` command.

<sup>6</sup>To reuse an addressmark later on, label the address with an optional argument to the `\address` command, e.g. `\address[DESS]` and repeat the label as the optional argument to the `\addressmark` command, e.g. `\addressmark[DESS]`.

<sup>7</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the

a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2. Mathematics in section heads**  $\int_a^b f(x) dx$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3. Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $C_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

surrounding line length.

2

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in C_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon, \tag{2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in C_+ : \bar{\Gamma}_\varepsilon \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \bar{\Gamma}_\varepsilon$  and let  $C_\varepsilon(z) = \{\lambda \in C_+ : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} a_n \frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{(\lambda - z)^n d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$|R(z)| \leq r^{-1} \max_{\lambda \in C_\varepsilon(z)} o(|z|) = r^{-1} \max_{\lambda \in C_\varepsilon(z)} |\lambda| \cdot O(|z| + r) = \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|).$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \bar{\Gamma}_\varepsilon/2,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

**2. Section Headings**

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

**2.1. Subsection Heading**

This text appears under a subsection heading.

**2.1.1. Subsubsection Heading**

This text appears under a subsubsection heading.

**Subsubsection Heading**

This text appears under a subsubsection heading.

**Subsubsection Heading**

This text appears under a subsubsection heading.

**3. Lists**

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.
  - (a) A numbered list item under a list item. The typeset appearance for this level is often different from the screen appearance. The typeset appearance of ten uses parentheses around the level indicator.
  - (b) Another numbered list item under a list item.
    - i. Third level numbered list item under a list item.
    - A. Fourth and final level of numbered list items allowed.

- Bullet item 1.
- Bullet item 2.
- Second level bullet item.
- \* Third level bullet item.
- Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

#### 4. About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2-4].

#### A. An Appendix

Because appendices may contain material that is supplementary rather than integral to the main text, many styles use a different numbering system for equations that appear in the appendix.

$$\frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \quad (5)$$

The quadratic equation shown as equation 5 is used to demonstrate how equations are numbered in the appendix.

**THE TITLE OF AN ARTICLE**

Dr. Author Jones  
Dr. Author Second and Dr. Author Third

At this Address  
author@university2.edu

Abstract: This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \bullet k = z + 1$  in this abstract.

Keywords: Elsevier L<sup>A</sup>T<sub>E</sub>X sample document

1. SAMPLE MATHEMATICS AND TEXT

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

1.1 In-line and Displayed Mathematics

The expression  $\sum_{k=1}^{\infty} a_k$  is in-line mathematics, while the numbered equation

$$\sum_{k=1}^{\infty} a_k \quad (1)$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ .

1.2 Mathematics in section heads  $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

<sup>1</sup> L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

1.3 Theorems, Lemmas, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1.** Let  $f(z)$  be an analytic function in  $C_a$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_a = \{z \in C_a : 0 < \epsilon \leq \arg z \leq \pi - \epsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_a. \quad (2)$$

**PROOF.** Change  $z$  for  $1/z$ . Then  $\Gamma_a \rightarrow \bar{\Gamma}_a = \{z \in C_a : \pi \in \Gamma_a\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (3)$$

Fix  $z \in \bar{\Gamma}_a$ , and let  $C_r(z) = \{\lambda \in C_a : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \epsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} a_{m+1} \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \quad (4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) \\ &= r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) \\ &= \frac{1 + \sin \epsilon}{\sin \epsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_a/2$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, z \in \bar{\Gamma}_a/2,$$

that implies (2) by substituting  $1/z$  back for  $z$ .

2. SECTION HEADINGS

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

2.1 Subsection Heading

This text appears under a subsection heading.

2.1.1 Subsubsection Heading This text appears under a subsubsection heading.

2.1.1.1 Subsubsubsection Heading This text appears under a subsubsubsubsection heading.

2.1.1.1.1 Subsubsubsubsubsection Heading This text appears under a subsubsubsubsubsection heading.

3. LISTS

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

- (1) Numbered list item 1.
- (2) Numbered list item 2.
  - (a) A numbered list item under a list item.
    - The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
    - (A) Another numbered list item under a list item.
      - (i) Third level numbered list item under a list item.
      - (A) Fourth and final level of numbered list items allowed.

- Bullet item 1.
- Bullet item 2.
  - Second level bullet item.
    - Third level bullet item.
    - Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

4. ABOUT THE BIBLIOGRAPHY

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as "and". You can also have multiple citations appear together. Here is an example: ; ; .

Appendix A. TITLE OF THE APPENDIX

The appendix should not contain material that is essential to the main text, but rather it should

contain text that is helpful to a reader seeking further clarification. It can also contain explanations and elaborations that are too long for footnotes. The appendix or appendices should not be a depository for odds and ends that the author was unable to work into the body of his text.

Equations are sometimes numbered differently in an appendix, but this may not always be true.

$$\frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \quad (\text{A.1})$$

The quadratic equation shown as equation A.1 is used to see how equations are numbered in the appendix.

amsmath	Standard

The shell produces documents with a layout that meets the preprint typesetting specifications for articles published in Elsevier Science's journals. Instead of using *SWP* or *SW* front matter, the shell uses a frontmatter environment in a  $\text{\TeX}$  field at the beginning of the document. The theorem environments are non-standard and defined by the typesetting specification files instead of in the document preamble. Note that using copy and paste techniques to move theorem-like environments between this shell and others requires re-tagging the environments.

**Abstract**

This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

*Key words:* Elsevier LaTeX sample document

**1 Sample Mathematics and Text**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

*1.1 In-line and Displayed Mathematics*

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \quad (1)$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} a_{n,k+1} - a_{n,k} \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Preprint submitted to Elsevier Science

22 July 2004

Two sets of  $\text{\LaTeX}$  parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

*1.2 Mathematics in section heads  $\int_0^{\beta} \ln t dt$* 

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

*1.3 Theorems, Lemmata, and Other Theorem-like Environments*

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, \quad z \in \Gamma_\varepsilon. \quad (2)$$

**PROOF.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (3)$$

<sup>1</sup>  $\text{\LaTeX}$  automatically selects the spacing depending on the surrounding line lengths.

Fix  $z \in \overline{T}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C} : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \quad (4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{T}_{\varepsilon/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{T}_{\varepsilon/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ .

## 2 Section Headings

The Title of an Article

Dr. Author Jones  
At this Address  
The Date

**Abstract**

This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

**SAMPLE MATHEMATICS AND TEXT**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

1

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a non-expansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{nk} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^+ \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  (1).

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**Mathematics in section heads**  $\int_0^1 \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

2

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \quad (2)$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \bar{\varepsilon} \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (3)$$

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} a_{m+1} \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \quad (4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, z \in \bar{\Gamma}_\varepsilon/2,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

#### AN APPENDIX

Because appendices may contain material that is supplementary rather than integral to the main text, many styles use a different numbering system for equations that appear in the appendices.

$$\frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \quad (5)$$

The quadratic equation shown as equation 5 is used to demonstrate how equations are numbered in the appendix.

## Harold O. Fried's Article

### Document class base file: article.cls

Options and Packages	Defaults
Document class options	Body text 12 pt
Packages:	
sw20fra	None

This shell produces documents using typesetting specification created for Harold O. Fried and Betty Daniel. The title page containing the abstract is single-spaced; the body of the article is double-spaced.

The Title of an Article

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2 Mathematics in section heads**  $\int_0^3 \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3 Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \in \Gamma_\varepsilon. \quad (2)$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \overline{z} \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (3)$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^1 a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^n d\lambda}{(\lambda - z)^2} + R(z), \quad (4)$$

2

The Title of an Article

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_{\varepsilon/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, \quad z \in \overline{\Gamma}_{\varepsilon/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

**2 Section Headings**

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

**2.1 Subsection Heading**

This text appears under a subsection heading.

**2.1.1 Subsubsection Heading**

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

---	--	---

**Abstract**—This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times \nabla)^k \cdot k = z + 1$  in this abstract.

I. SAMPLE MATHEMATICS AND TEXT

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**A. In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \quad (1)$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\sum_{k=0}^{\infty} a_{n,k} = 1$ . Then for each  $x$  in  $C$ ,  $\sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

<sup>1</sup>l<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

**B. Mathematics in section heads**  $f'' \ln |dt|$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**C. Theorems, Lemmas, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1.** Let  $f(z)$  be an analytic function in  $C_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_r = \{z \in C_+ : 0 < \epsilon \leq \arg z \leq \pi - \epsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_r \quad (2)$$

*Proof.* Change  $z$  for  $1/z$ . Then  $\Gamma_r \rightarrow \bar{\Gamma}_r = \{z \in C_+ : \pi \in \bar{\Gamma}_r\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (3)$$

Fix  $z \in \bar{\Gamma}_r$  and let  $C_r(z) = \{\lambda \in C_+ : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \epsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} \frac{a_m}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \quad (4)$$

where for the remainder  $R(z)$  we have

$$|R(z)| \leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda \cdot O(|z| + r)| \leq \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \epsilon}{\sin \epsilon} \cdot O(|z|).$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_r$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, z \in \bar{\Gamma}_r,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

## II. SECTION HEADINGS

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

**A. Subsection Heading**

This text appears under a subsection heading.

**1) Subsubsection Heading:** This text appears under a subsubsection heading.

**a) Subsubsubsection Heading:** This text appears under a subsubsubsection heading.

(Subsubsubsubsection head) Subsubsubsubsection Heading  
This text appears under a subsubsubsubsection heading.

## III. LISTS

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

- 1) Numbered list item 1.
- 2) Numbered list item 2.
  - a) A numbered list item under a list item.

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.

- b) Another numbered list item under a list item.
  - 3) Third level numbered list item under a list item.
    - A) Fourth and final level of numbered list items allowed.

- Bullet item 1.
- Bullet item 2.
  - Second level bullet item.
  - Third level bullet item.
  - Fourth and final level bullet item.

**Description list item** has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

Bunyip/Mythical beast of Australian Aboriginal legends.

## IV. ABOUT THE BIBLIOGRAPHY

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2], [3], [4].

## APPENDIX

Because appendices may contain material that is supplementary rather than integral to the main text, many styles use a different numbering system for equations that appear in the appendices.

$$\frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \quad (5)$$

The quadratic equation shown as equation 5 is used to demonstrate how equations are numbered in the appendix.

## IEEE Transactions for Journals

## Document class base file: IEEEtran.cls

Options and Packages	Defaults
Document class options	Two-column output
Packages:	
None	

This shell produces documents appropriate for submission to many journals published by the Institute of Electrical and Electronics Engineers, Inc. The shell creates key words with a special macro that appears at the beginning of the body of your documents; replace the text in the key words environment with your key words.

The shell also uses two special commands (`markboth` and `setcounter`), which are placed in  $\text{T}_\text{E}\text{X}$  fields. The commands set the text for the page header and the beginning page number. Revise or omit the contents of these fields as necessary. The shell contains more detailed information.

## The Title of an Article

Dr. Author Jones

**Abstract**—This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times \mathbf{F}) \cdot \mathbf{k} = z + 1$  in this abstract.

**Index Terms**—Style file,  $\text{I}\text{T}\text{E}\text{E}$ , IEEE Transactions.

I. SAMPLE MATHEMATICS AND TEXT

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**A. In-line and Displayed Mathematics**

The expression  $\sum_{k=1}^{\infty} a_k$  is in-line mathematics, while the numbered equation

$$\sum_{k=1}^{\infty} a_k \quad (1)$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $\|a_n\| \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{n-1} \|a_{k+1} - a_k\| \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{n-1} a_{k+1} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of  $\text{I}\text{T}\text{E}\text{X}$  parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**B. Mathematics in section heads**  $\int_0^1 \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

At this Address  
<sup>1</sup> $\text{I}\text{T}\text{E}\text{X}$  automatically selects the spacing depending on the surrounding line length.

**C. Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1:** Let  $f(z)$  be an analytic function in  $C_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_r = \{z \in C_+ : 0 < \epsilon \leq \arg z \leq \pi - \epsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \in \Gamma_r, \quad (2)$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_r \rightarrow \bar{\Gamma}_r = \{z \in C_+ : \pi \in \bar{\Gamma}_r\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (3)$$

Fix  $c \in \bar{\Gamma}_r$ , and let  $C_r(z) = \{\lambda \in C_+ : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \epsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \frac{1}{2\pi i} \int_{C_r(z)} \frac{1}{(\lambda - z)^2} \int_{c_0}^1 \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \quad (4)$$

where for the remainder  $R(z)$  we have

$$|R(z)| \leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda - O(|z| + r)| = \frac{|z| + r}{\sin \epsilon} \cdot O(|z| + r) = \frac{1 + \sin \epsilon}{\sin \epsilon} \cdot O(|z| + r).$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_r$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, \quad z \in \bar{\Gamma}_r.$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

**SUMMARY** A summary of this article.  
**key words:** *ITP&Z* class file

**1. Sample Mathematics and Text**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**1.1 In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1. Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=1}^{\infty} (a_{n,k+1} - a_{n,k})^2 = 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=1}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.\*\*\* The spacing above and below a display depends on whether the lines above and below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

Manuscript received November 20, 1999.  
Manuscript revised April 28, 2000.  
†The authors are with the Faculty ...  
††The author is with the Faculty ...  
†††The author is with the Faculty ...  
††††The author is with the Faculty ...  
\*This document was created using Scientific Word/Scientific WordFiles by MacKrisnan Software, Inc.  
\*\*L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2 Mathematics in section heads**  $\int_0^1 \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3 Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1:** Let  $f(z)$  be an analytic function in  $C_r$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_r = \{z \in C_r : 0 < \arg z \leq \pi - \epsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_r \tag{2}$$

**Proof:** Change  $z$  for  $1/z$ . Then  $\Gamma_r \rightarrow \bar{\Gamma}_r = \{z \in C_r : \pi \in \Gamma_r\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \bar{\Gamma}_r$ , and let  $C_r(z) = \{\lambda \in C_r : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \epsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} =$$

$$\sum_{n=0}^{\infty} a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_n)^n d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

IEICE TRANS. COMMUN., VOL. E83-B, NO. 4 JANUARY 1999

---

2

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) \\ &= r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{\sin \epsilon} \cdot O(|z| + r) \\ &= \frac{1 + \sin \epsilon}{\sin \epsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_{r/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \bar{\Gamma}_{r/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

**2. Section Headings**

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

**2.1 Subsection Heading**

This text appears under a subsection heading.

**2.1.1 Subsubsection Heading**

This text appears under a subsubsection heading.

(1) Subsubsubsection Heading

This text appears under a subsubsubsection heading.

((1).1) Subsubsubsubsection Heading

This text appears under a subsubsubsubsection heading.

**3. Lists**

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.

- a. A numbered list item under a list item.  
The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
- b. Another numbered list item under a list item.
  - i. Third level numbered list item under a list item.

- A. Fourth and final level of numbered list items allowed.
- Bullet item 1.
- Bullet item 2.
  - Second level bullet item.
  - \* Third level bullet item.
  - Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in. **Bunyip** Mythical beast of Australian Aboriginal legends.

**4. About the Bibliography**

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2] [4].

$$\frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \tag{A-1}$$

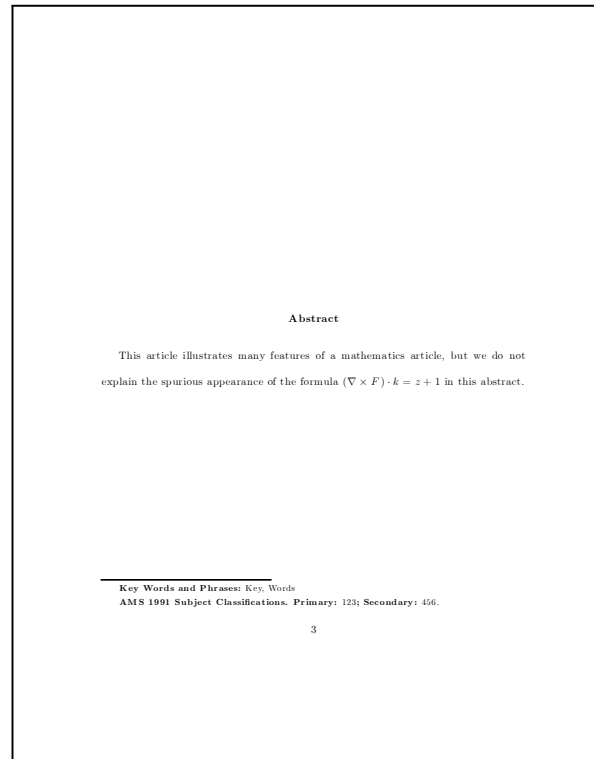

The quadratic equation shown as equation A-1 is used to demonstrate how equations are numbered in the appendix.

## International Journal of Forecasting - Draft

### Document class base file: article.cls

Options and Packages	Defaults
Document class options	Body text 12 pt
Packages:	
sw20dft2	None

This shell produces draft documents suitable for submitting to the *International Journal of Forecasting*. It has large margins and double spacing throughout so that referees and editors have room to write comments. The front matter includes specification of a running title, AMS classification (both primary and secondary), and key words. Documents produced with this shell are not camera-ready.

**1 Sample Mathematics and Text**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**1.1 In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^+ \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>3</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$\overline{\hspace{10em}} \quad x^2 + y^2 = z^2$$

<sup>3</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C} : \exists \varepsilon \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_\varepsilon(z) = \{\lambda \in \mathbb{C} : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} \frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{(\lambda - z_0)^n d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_\varepsilon(z)} o(|z|) = r^{-1} \max_{\lambda \in C_\varepsilon(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_{\varepsilon/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_{\varepsilon/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

**2 Section Headings**

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

- (b) Another numbered list item under a list item.
  - i. Third level numbered list item under a list item.
    - A. Fourth and final level of numbered list items allowed.
- Bullet item 1.
  - Bullet item 2.
    - Second level bullet item.
      - \* Third level bullet item.
        - Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

**4 About the Bibliography**

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

### 1. Sample Mathematics and Text

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

#### 1.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ .<sup>1</sup>

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>2</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

#### 1.2 Mathematics in section heads $\int_a^b f(x) dx$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

#### 1.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\epsilon = \{z \in \mathbb{C}_+ : 0 < \epsilon \leq \arg z \leq \pi - \epsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\epsilon. \tag{2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\epsilon \rightarrow \bar{\Gamma}_\epsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\epsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

2

Fix  $z \in \overline{\Gamma}_r$ , and let  $C_r(z) = \{\lambda \in \mathbb{C} : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=2}^{\infty} a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^n d\lambda}{(\lambda - z)^2} + R(z), \quad (4)$$

where for the remainder  $R(z)$  we have

$$|R(z)| \leq r^{-1} \max_{\lambda \in C_r(z)} |f(\lambda)| = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) = \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|).$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_{r/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_{r/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

## 2. Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

### 2.1 Subsection Heading

This text appears under a subsection heading.

#### 2.1.1 Subsubsection Heading

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

## 3. Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

- (1) Numbered list item 1.
- (2) Numbered list item 2.
  - a. A numbered list item under a list item.
 

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
  - b. Another numbered list item under a list item.
    - i. Third level numbered list item under a list item.
      - A. Fourth and final level of numbered list items allowed.
- Bullet item 1.
  - Bullet item 2.
    - Second level bullet item.
      - \* Third level bullet item.
        - Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

## 4. About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as<sup>[1]</sup> and<sup>[2]</sup>. You can also have multiple citations appear together. Here is an example:<sup>[2-4]</sup>

## Appendix: Appendix

Because appendices may contain material that is supplementary rather than integral to the main text, many styles use a different numbering system for equations that appear in the appendices.

$$-\frac{k \pm \sqrt{k^2 - 4ac}}{2a} \quad (A.1)$$

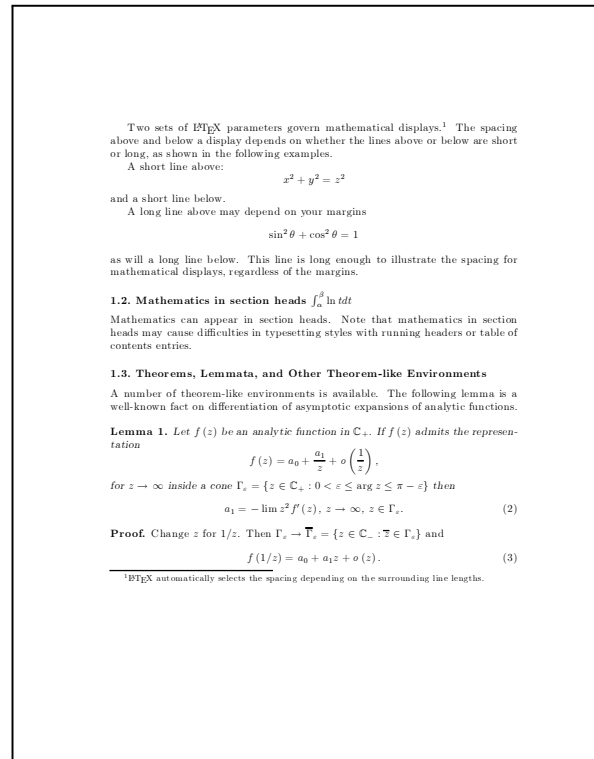

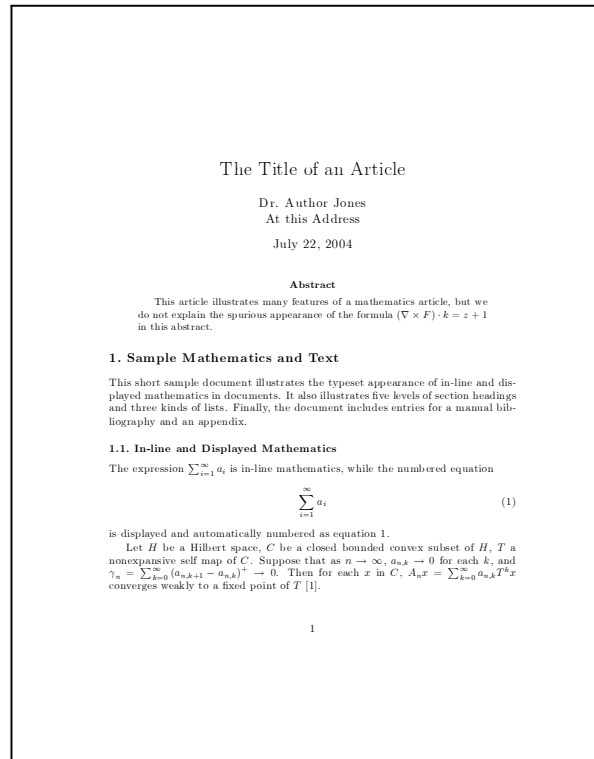

The quadratic equation shown as equation A.1 is used to demonstrate how equations are numbered in the appendix.

## JEEP - A General Purpose Vehicle

### Document class base file: article.cls

Options and Packages	Defaults
Document class options	Body text 12 pt
Packages:	
amsmath	Standard
jeep	None

The shell produces general-purpose documents, as the name implies, using a 12-pt font. Headings appear at the left side of the page.

Fix  $z \in \overline{\Gamma}_r$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sinh \varepsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \quad (4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sinh \varepsilon}{\sinh \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_{r/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_{r/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

## 2. Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

### 2.1. Subsection Heading

This text appears under a subsection heading.

#### 2.1.1. Subsubsection Heading

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

## 3. Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
  2. Numbered list item 2.
    1. A numbered list item under a list item.
 

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
    2. Another numbered list item under a list item.
      1. Third level numbered list item under a list item.
        1. Fourth and final level of numbered list items allowed.
- Bullet item 1.
  - Bullet item 2.
    - Second level bullet item.
      - \* Third level bullet item.
        - Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

## 4. About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

## References

- [1] N. Dunford and J. Schwartz, *Functional Analysis*, v. 2, John Wiley and Sons, New York, 1963.

## A. An Appendix

Because appendices may contain material that is supplementary rather than integral to the main text, many styles use a different numbering system for equations that appear in the appendices.

$$\frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \quad (5)$$

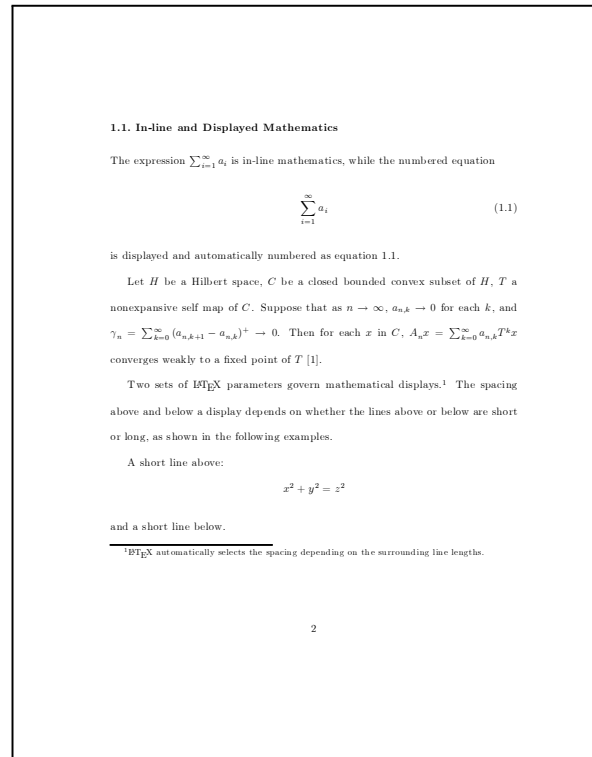

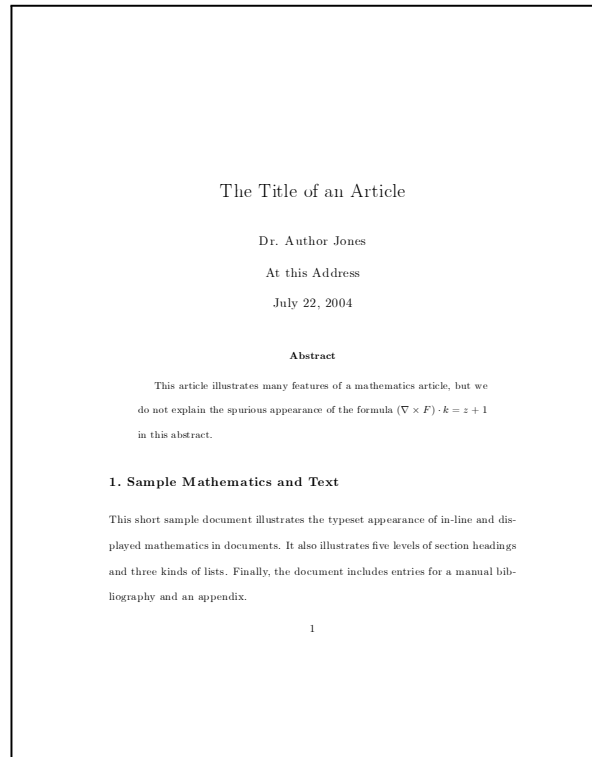

The quadratic equation shown as equation 5 is used to demonstrate how equations are numbered in the appendix.

## JEEP - Double-spaced Except for Quotes

### Document class base file: article.cls

Options and Packages	Defaults
Document class options	Body text 12 pt
Packages:	
amsmath	Standard
jeep	None
sw20jar2	None

The information in documents produced with this shell is double-spaced, except for quotes. The shell uses a 12-pt font. Headings appear at the left side of the page.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2. Mathematics in section heads**  $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3. Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1.** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \in \Gamma_\varepsilon. \tag{1.2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{1.3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (1.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^1 a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^n d\lambda}{(\lambda - z)^2} + R(z), \tag{1.4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_{\varepsilon/2}$ , and hence by the Cauchy theorem (1.4) implies

The Quotation tag is used for quotations of more than one paragraph. Following is the beginning of *Alice's Adventures in Wonderland* by Lewis Carroll:

There was nothing so very remarkable in that; nor did Alice think it so very much out of the way to hear the Rabbit say to itself, 'Oh dear! Oh dear! I shall be late!' (when she thought it over afterwards, it occurred to her that she ought to have wondered at this, but at the time it all seemed quite natural); but when the Rabbit actually took a watch out of its waistcoat-pocket, and looked at it, and then hurried on, Alice started to her feet, for it flashed across her mind that she had never before seen a rabbit with either a waistcoat-pocket, or a watch to take out of it, and burning with curiosity, she ran across the field after it, and fortunately was just in time to see it pop down a large rabbit-hole under the hedge.

**4. About the Bibliography**

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

The Title of an Article  
Dr. Author Jones\*

---

Received 1 April 1999; received in revised form 25 December 1999; accepted 10 February 2000

**Abstract**

This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

*Keywords:* Inflation stabilization; Devolution rates; Policy uncertainty; Supply-side effects

*JEL classification:* F2; F4

---

**1. Sample Mathematics and Text**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

*1.1. In-line and Displayed Mathematics*

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ .

---

\*At this Address

THE TITLE OF AN ARTICLE 2

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margin.

*1.2. Mathematics in section heads*  $\int_0^2 \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

*1.3. Theorems, Lemmata, and Other Theorem-like Environments*

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

THE TITLE OF AN ARTICLE 3

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \quad (2)$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (3)$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^1 a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^n d\lambda}{(\lambda - z)^2} + R(z), \quad (4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

THE TITLE OF AN ARTICLE 4

**2. Section Headings**

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

**2.1. Subsection Heading**

This text appears under a subsection heading.

**2.1.1. Subsubsection Heading**

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

**3. Lists**

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.

(a) A numbered list item under a list item.

THE TITLE OF AN ARTICLE 5

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.

(b) Another numbered list item under a list item.

i. Third level numbered list item under a list item.

A. Fourth and final level of numbered list items allowed.

- Bullet item 1.
- Bullet item 2.

- Second level bullet item.

+ Third level bullet item.

- Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

**4. About the Bibliography**

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as 4, 5 and 6. You can also have multiple citations appear together. Here is an example: 2, 3, 4.

THE TITLE OF AN ARTICLE 6

**References**

Dr. Author Jones

*At this Address*

*This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\mathbb{N} \times \mathbb{F}) \cdot k = z + 1$  in this abstract.*

*PACS numbers: 05.70 Ln, 05.70 Jk, 64.*

**1. Sample Mathematics and Text**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**1.1. In-line and Displayed Mathematics**

The expression  $\sum_{k=1}^{\infty} a_k$  is in-line mathematics, while the numbered equation

$$\sum_{k=1}^{\infty} a_k \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a non-expansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ <sup>1</sup>.

Two sets of  $\text{\LaTeX}$  parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

<sup>1</sup> $\text{\LaTeX}$  automatically selects the spacing depending on the surrounding line lengths.

Dr. Author Jones

A short line above:  $x^2 + y^2 = z^2$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2. Mathematics in section heads  $\int_a^b \ln t dt$**

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3. Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

*for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then*

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_\varepsilon(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

The Title of an Article

where for the remainder  $R(z)$  we have

$$|R(z)| \leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) = \frac{|z| + r}{r} O(|z| + r) = \frac{1 + \sin \epsilon}{\sin \epsilon} O(|z|).$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{T}_{\epsilon/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{T}_{\epsilon/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

The Date

**Abstract**

This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

**1 Sample Mathematics and Text**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**1.1 In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=1}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=1}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

1

**1.2 Mathematics in section heads**  $\int_0^1 \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3 Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\epsilon = \{z \in \mathbb{C}_+ : 0 < \epsilon \leq \arg z \leq \pi - \epsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\epsilon. \tag{2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\epsilon \rightarrow \overline{\Gamma}_\epsilon = \{z \in \mathbb{C}_- : -\pi \in \arg z \in -\pi + \epsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \overline{\Gamma}_\epsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \epsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^{-n} d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$|R(z)| \leq r^{-1} \max_{\lambda \in C_r(z)} o(|\lambda|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) = \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \epsilon}{\sin \epsilon} \cdot O(|z|).$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\epsilon$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, z \in \overline{\Gamma}_\epsilon,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

## A Sample Document \*

Dr. Author Jones  
Author's Affiliation

April 15, 2003

**Abstract.** This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

What can't be done with TeX isn't worth doing.

## 1. Sample Mathematics and Text

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

## 1.1. IN-LINE AND DISPLAYED MATHEMATICS

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \quad (1)$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  (2).

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:  $x^2 + y^2 = z^2$

and a short line below:

<sup>1</sup>Footnote to the title with the 'shades' command.  
<sup>2</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as well a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

1.2. MATHEMATICS IN SECTION HEADS  $\int_0^1 \ln t dt$ 

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

## 1.3. THEOREMS, LEMMATA, AND OTHER THEOREM-LIKE ENVIRONMENTS

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**LEMMA 1.** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, \quad z \in \Gamma_\varepsilon. \quad (2)$$

*Proof.* Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (3)$$

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} \frac{a_m}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \quad (4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\mathbb{T}}_{r/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\mathbb{T}}_{r/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ .

## 2. Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

### 2.1. SUBSECTION HEADING

This text appears under a subsection heading.

#### 2.1.1. Subsubsection Heading

This text appears under a subsubsection heading.

2.1.1.1. Subsubsubsection Heading This text appears under a subsubsubsection heading.

Subsubsubsubsection Heading This text appears under a subsubsubsubsection heading.

## 3. Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.
  - a) A numbered list item under a list item.  
The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
  - b) Another numbered list item under a list item.
    - i) Third level numbered list item under a list item.

A) Fourth and final level of numbered list items allowed.

- Bullet item 1.
- Bullet item 2.
  - Second level bullet item.
    - \* Third level bullet item.
    - + Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

## Appendix

### A. An Appendix

Because appendices may contain material that is supplementary rather than integral to the main text, many styles use a different numbering system for equations that appear in the appendices.

$$\frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \quad (5)$$

The quadratic equation shown as equation 5 is used to demonstrate how equations are numbered in the appendix.

**ABSTRACT**

This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

---

1. Sample Mathematics and Text

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

*1.1. In-line and Displayed Mathematics*

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1.1}$$

is displayed and automatically numbered as equation 1.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_n x \rightarrow 0$  for each  $x$  and  $\eta_n = \sum_{k=0}^{n-1} (a_{k+1} - a_k) x^k \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{n-1} a_k x^k$  converges weakly to a fixed point of  $T$  [1].

Two sets of LaTeX parameters govern mathematical displays.\* The

2

spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below:

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as well as long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

*1.2. Mathematics in section heads  $\int_a^b \ln t dt$*

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

*1.3. Theorems, Lemmata, and Other Theorem-like Environments*

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**LEMMA 1.1.** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{1.2}$$

*Proof.* Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \bar{\varepsilon} \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{1.3}$$

Fix  $z \in \bar{\Gamma}_\varepsilon$  and let  $C_\varepsilon(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (1.3) that

$$\frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} \frac{1}{m!} a_{m+1} \int_{C_\varepsilon(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{1.4}$$

3

where for the remainder  $R(z)$  we have

$$|R(z)| \leq r^{-1} \max_{\Delta \in \mathcal{C}(z)} \theta(|z|) = r^{-1} \max_{\Delta \in \mathcal{C}(z)} [A \cdot O(|z| + r)]$$

$$= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \epsilon}{\sin \epsilon} \cdot O(|z|).$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_{\epsilon/2}$ , and hence by the Cauchy theorem (1.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_{\epsilon/2},$$

that implies (1.2) by substituting  $1/z$  back for  $z$ . ■

2. Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

**2.1. Subsection Heading**  
This text appears under a subsection heading.

**2.1.1. Subsubsection Heading** This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading**  
This text appears under a subsubsubsubsection heading.

3. Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.
  - (a) A numbered list item under a list item.  
The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.

4

- (b) Another numbered list item under a list item.
  - i. Third level numbered list item under a list item.
    - A. Fourth and final level of numbered list items allowed.

- Bullet item 1.
- Bullet item 2.
  - Second level bullet item.
    - \* Third level bullet item.
    - \* Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

4. About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

A. An Appendix

Because appendices may contain material that is supplementary rather than integral to the main text, many styles use a different numbering system for equations that appear in the appendices.

$$\frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \tag{A.1}$$

The quadratic equation shown as equation A.1 is used to demonstrate how equations are numbered in the appendix.

## Mathematical Reviews Template

**Review text:**

The article discusses in-line and displayed mathematics in Scientific WorkPlace and Scientific Word. The expression  $\sum_{i=1}^n a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^n a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{n-1} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{n-1} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ .

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays. The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

Mathematics can appear in section heads. Note that mathematics in section

1

heads may cause difficulties in typesetting styles with running headers or table of contents entries.

The shell features five levels of headings: section through subsubsubsection. Tags figure prominently in the use of the shell. You can apply the logical markup tag *Emphatized*. You can apply the visual markup tags **Bold**, *Italics*, Roman, *Sans Serif*, *Slanted*, SMALL CAPS, and **Typewriter**. You can apply the special, mathematics only, tags **faktur**, **BLACKBOARD BOLD**, and *CALIGRAPHIC*. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z. You can apply the size tags *tiny*, *x-tiny*, *scriptsize*, *footnotesize*, *small*, *normalsize*, *large*, **Large**, **LARGE**, **huge** and **Huge**.

This is a Body Math paragraph. Each time you press the Enter key, Scientific WorkPlace switches to mathematics mode. This is convenient for carrying out "scratchpad" computations.

Following is a group of paragraphs marked as Body Quote. This environment is appropriate for a short quotation or a sequence of short quotations.

The buck stops here. *Harry Truman*

Ask not what your country can do for you; ask what you can do for your country. *John F. Kennedy*

I am not a crook. *Richard Nixon*

It's no exaggeration to say the undecimals could go one way or another. *George Bush*

**List Environments**

You can create unnumbered, bulleted, and description lists using the tag `popup` at the bottom left of the screen.

1. List item 1
2. List item 2

(a) A list item under a list item.

The typeset style for this level is different than the screen style. The screen shows a lower case alphabetic character followed by a period while the typeset style uses a lower case alphabetic character surrounded by parentheses.

(b) Just another list item under a list item.

- i. Third level list item under a list item.

2

A. Fourth and final level of list items allowed.

- Bullet item 1
- Bullet item 2
  - Second level bullet item.
    - \* Third level bullet item.
      - Fourth (and final) level bullet item.

### 1 Sample Mathematics and Text

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

#### 1.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \quad (1)$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^+ \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of  $\text{\LaTeX}$  parameters govern mathematical displays.<sup>2</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

<sup>1</sup>Supported by the National Science Foundation.

<sup>2</sup> $\text{\LaTeX}$  automatically selects the spacing depending on the surrounding line lengths.

Author

2

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

### 1.2 Mathematics in section heads $\int_0^1 \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

### 1.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \quad (2)$$

*Proof.* Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (3)$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} \frac{1}{m!} a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \quad (4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Author 3

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\mathbb{T}}_{r/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\mathbb{T}}_{r/2}.$$

that implies (2) by substituting  $1/z$  back for  $z$ .

**2 Section Headings**

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

**2.1 Subsection Heading**

This text appears under a subsection heading.

**2.1.1 Subsubsection Heading**

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

**3 Lists**

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.

Author 4

- (a) A numbered list item under a list item.  
The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
- (b) Another numbered list item under a list item.
  - i. Third level numbered list item under a list item.
    - A. Fourth and final level of numbered list items allowed.

- Bullet item 1.
- Bullet item 2.
  - Second level bullet item.
  - \* Third level bullet item.
    - Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

**4 About the Bibliography**

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

**Abstract**

This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F)^k$ ,  $k = z + 1$  in this abstract.

**1 Sample Mathematics and Text**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**1.1 In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a non-expansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{nk} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=1}^n (a_{k+1} - a_{nk})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_{nx} = \sum_{k=0}^n a_{nk} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of  $\LaTeX$  parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below:

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as well a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2 Mathematics in section heads**  $\int_0^2 \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table-of-contents entries.

<sup>1</sup> $\LaTeX$  automatically selects the spacing depending on the surrounding line lengths.

1

**1.3 Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\epsilon = \{z \in \mathbb{C}_+ : 0 < \epsilon \leq \arg z \leq \pi - \epsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \in \Gamma_\epsilon. \tag{2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\epsilon \rightarrow \bar{\Gamma}_\epsilon = \{z \in \mathbb{C}_+ : \pi \in \Gamma_\epsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \bar{\Gamma}_\epsilon$  and let  $C_r(z) = \{\lambda \in \mathbb{C}_+ : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \epsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^n d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \epsilon}{\sin \epsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_\epsilon/2$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \bar{\Gamma}_\epsilon/2,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

**2 Section Headings**

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

**2.1 Subsection Heading**

This text appears under a subsection heading.

**2.1.1 Subsubsection Heading**

This text appears under a subsubsection heading.

**2.1.1.1 Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**2.1.1.1.1 Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

### 3 Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
  2. Numbered list item 2.
- (a) A numbered list item under a list item.  
The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
- (b) Another numbered list item under a list item.  
Third level numbered list item under a list item.
- A. Fourth and final level of numbered list items allowed.
- Bullet item 1.
  - Bullet item 2.
- Second level bullet item.
- Third level bullet item.
- Fourth and final level bullet item.
- Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.
- Bunyip** Mythical beast of Australian Aboriginal legends.

### 4 About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

### The Title of an Article

Dr. Author Jones  
*At this Address*

Accepted 1998 December 15. Received 1998 December 14; in original form 1998 October 11

**ABSTRACT**  
This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\mathbb{N} \times \mathbb{P}) \cdot k = 2 + 1$  in this abstract.

**Key words:** Stars, planets.

**1 SAMPLE MATHEMATICS AND TEXT**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**1.1 In-line and Displayed Mathematics**

The expression  $\sum_{k=1}^n a_k$  is in-line mathematics, while the numbered equation

$$\sum_{k=1}^n a_k \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that  $\|a_n\| \rightarrow \infty$ ,  $a_{k+1} = 0$  for each  $k$ , and  $a_n = \sum_{k=1}^n (a_{k+1} - a_k x^k) \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=1}^n a_k x^k$  converges weakly to a fixed point of  $T$  (1).

Two sets of  $\LaTeX$  parameters govern mathematical displays.<sup>\*</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

<sup>\*</sup>  $\LaTeX$  automatically selects the spacing depending on the surrounding line lengths.

© 0000 RAS

2 A. Jones (for running header)

$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1$ , as  $z \rightarrow \infty$ ,  $z \in \mathbb{T}_{1/2}$ , that implies (2) by substituting  $1/z$  back for  $z$ .  $\square$

**2 SECTION HEADINGS**

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

**2.1 Subsection Heading**  
This text appears under a subsection heading.

**2.1.1 Subsubsection Heading**  
This text appears under a subsubsection heading.

**2.1.1.1 Subsubsubsection Heading**  
This text appears under a subsubsubsection heading.

**3 LISTS**

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

- (i) Numbered list item 1.
- (ii) Numbered list item 2.
- (a) A numbered list item under a list item.
- (b) Another numbered list item under a list item.
- (1) Third level numbered list item under a list item.
- (A) Fourth and final level of numbered list items allowed.
- Bullet item 1.
- Bullet item 2.
- Second level bullet item.
- Third level bullet item.
- Fourth and final level bullet item.

Description List Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

Bunyip Mythical beast of Australian Aboriginal legends.

**3.1 Tags**

You can apply the logical markup tag *Emphasized*. You can apply the visual markup tags **Bold**, *Italic*, Roman, Sans Serif, Slanted, **SANS CAPS**, and **Typewriter**. You can apply the special, mathematics-only, tags **BLACKBOARD BOLD**, **CALIGRAPHIC**, and **fraktur**. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

You can apply the size tags *small*, *x-small*, *footnotesize*, *small*, *normalsize*, *large*, **Large**, **LARGE**, **huge** and **Huge**.

This is a Body Math paragraph. Each time you press the Enter key, Scientific WorkPlace switches to mathematics mode. This is convenient for carrying out “scratchpad” computation.

Following is a group of paragraphs marked as Body Quote. This environment is appropriate for a short quotation or a sequence of short quotations.

The book stops here. *Harry Truman*

Ask not what your country can do for you; ask what you can do for your country. *John F. Kennedy*

I am not a crook. *Richard Nixon*

It's no exaggeration to say the underbirds could go one way or another. *George Bush*

The Quotation tag is used for quotations of more than one paragraph. Following is the beginning of *Alice's Adventures in Wonderland* by Lewis Carroll.

Alice was beginning to get very tired of sitting by her sister on the bank, and of having nothing to do; once or twice she had peeped into the book her sister was reading, but it had no pictures or conversations in it, “and what is the use of a book,” thought Alice “without pictures or conversations?”

So she was considering in her own mind (as well as she could, for the hot day made her feel very sleepy and stupid), whether the pleasure of making a daisy-chain would be worth the trouble of getting up and picking the daisies, when suddenly a White Rabbit with pink eyes ran close by her.

There was nothing so very remarkable in that; nor did Alice think it so very much out of the way to hear the Rabbit say to itself, “Oh dear! Oh dear! I shall be late!” (when she thought it over afterwards, it occurred to her that she ought to have wondered at this, but at the time it all seemed quite natural); but when the Rabbit actually took a watch out of its waistcoat-pocket, and looked at it, and then hurried on, Alice started to her feet, for it flashed across her mind that she had never before seen a rabbit with either a waistcoat-pocket, or a watch to take out of it, and burning with curiosity, she ran across the field after it, and fortunately was just in time to see it pop down a large rabbit-hole under the hedge.

In another moment down went Alice after it, never once considering how in the world she was to get out again.

**4 ABOUT THE BIBLIOGRAPHY**

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as (4), (5) and (6). You can also have multiple citations appear together. Here is an example: (2; 3; 4).

## APPENDIX A: AN APPENDIX

Because appendices may contain material that is supplementary rather than integral to the main text, many styles use a different numbering system for equations that appear in the appendices.

$$\frac{a \pm \sqrt{b^2 - 4ac}}{2a} \quad (A1)$$

The quadratic equation shown as equation A1 is used to demonstrate how equations are numbered in the appendix.

**Sample Mathematics and Text**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**A. In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^k \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

102

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.[7] The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

### B. Mathematics in section heads $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

### C. Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), z \in \Gamma_\varepsilon. \quad (2)$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \bar{\Gamma}_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (3)$$

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^n d\lambda}{(\lambda - z)^2} + R(z), \quad (4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_{\varepsilon/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \bar{\Gamma}_{\varepsilon/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

### I. SECTION HEADINGS

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

#### A. Subsection Heading

This text appears under a subsection heading.

##### 1. Subsubsection Heading

This text appears under a subsubsection heading.

a. Subsubsubsection Heading This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

[6]. You can also have multiple citations appear together. Here is an example: [2–4].

- [1] N. Dunford and J. Schwartz, *Functional Analysis*, v. 2, John Wiley and Sons, New York, 1963.
- [2] Harstad, K. and Bellan, J., "Isolated fluid oxygen drop behavior in fluid hydrogen at rocket chamber pressures", *Int. J. Heat Mass Transfer*, 1998a, **41**, 3537-3550

2

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \in \Gamma_\varepsilon. \quad (2)$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (3)$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \quad (4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_{\varepsilon/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_{\varepsilon/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

### Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

#### Subsection Heading

This text appears under a subsection heading.

#### Subsubsection Heading

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

### Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
  2. Numbered list item 2.
    - (a) A numbered list item under a list item.
 

The typeset appearance for this level is often different from the screen appearance.

The typeset appearance often uses parentheses around the level indicator.
    - (b) Another numbered list item under a list item.
      - i. Third level numbered list item under a list item.
        - A. Fourth and final level of numbered list items allowed.
- Bullet item 1.
  - Bullet item 2.
    - Second level bullet item.

- Third level bullet item.
- Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

### References and Notes

1. The package is TTH, available at <http://hutchinson.belmont.ma.us/th/>.
2. As the mark-up of the T<sub>H</sub>X source for this document makes clear, your ?le should be coded in L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub>, not L<sup>A</sup>T<sub>E</sub>X 2.09 or an earlier release. Also, please use the article document class.
3. Among whom are the author of this document. The “real” references and notes contained herein were compiled using BIB<sub>T</sub>X from the sample bib ?le scibib.bib, the style package scicite.sty, and the bibliography style ?le Science.bst.
4. One of the equation editors we use, Equation Magic (MicroPress Inc., Forest Hills, NY; <http://www.micropress-inc.com/>), interprets native T<sub>H</sub>X source code and generates an equation as an OLE picture object that can then be cut and pasted directly into Word. This editor, however, does not handle L<sup>A</sup>T<sub>E</sub>X environments (such as {array} or {eqnarray}); it can interpret only T<sub>H</sub>X codes. Thus, when there’s a choice, we ask that you avoid these L<sup>A</sup>T<sub>E</sub>X calls in displayed math — for example, that you use the T<sub>H</sub>X \matrix command for ordinary matrices, rather than the L<sup>A</sup>T<sub>E</sub>X {array} environment.

5. We’ve included in the template file scifile.tex a new environment, {scilastrnote}, that generates a numbered final citation without a corresponding signal in the text. This environment can be used to generate a final numbered reference containing acknowledgments, sources of funding, and the like, per Science style. Along those lines, we’d like to thank readers of this document for their attention, and invite them to address any questions to Stewart Wills, at [swills@aaas.org](mailto:swills@aaas.org).

is displayed and automatically numbered as equation 1.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $\alpha_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=1}^{\infty} (\alpha_{n,k} + \alpha_{n,k}^2) \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=1}^{\infty} \alpha_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below:

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2. Mathematics in section heads**  $\int^2$  in  $tdt$ . Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3. Theorems, Lemmata, and Other Theorem-like Environments.** A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

---

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

1

LEMMA 1.1. Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_r = \{z \in \mathbb{C}_+ : 0 < \arg z \leq \pi - \epsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_r. \tag{1.2}$$

*Proof.* Change  $z$  for  $1/z$ . Then  $\Gamma_r \rightarrow \overline{\Gamma}_r = \{z \in \mathbb{C}_+ : -\overline{\Gamma} \in \Gamma_r\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{1.3}$$

Fix  $z \in \overline{\Gamma}_r$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_+ : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \epsilon/2$ . It follows from (1.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^n d\lambda}{(\lambda - z)^2} + R(z), \tag{1.4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \epsilon}{\sin \epsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_r$ , and hence by the Cauchy theorem (1.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_r,$$

that implies (1.2) by substituting  $1/z$  back for  $z$ .  $\square$

**2. Section Headings.** Use the Sectioning for major sections, such as the one just above. Four additional heading levels are available, as described below.

**2.1. Subsection Heading.** This text appears under a subsection heading.

**2.1.1. Subsubsection Heading.** This text appears under a subsubsection heading.

**Subsubsubsection Heading.** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading.** This text appears under a subsubsubsubsection heading.

**3. Lists.** Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.
  - (a) A numbered list item under a list item.

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.

2

- (b) Another numbered list item under a list item.
  - i. Third level numbered list item under a list item.
    - A. Fourth and final level of numbered list items allowed.
- Bullet item 1.
  - Bullet item 2.
    - Second level bullet item.
      - \* Third level bullet item.
        - Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

**4. About the Bibliography.** Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

#### Appendix A. An Appendix.

Because appendices may contain material that is supplementary rather than integral to the main text, many styles use a different numbering system for equations that appear in the appendices.

$$\frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \quad (\text{A.1})$$

The quadratic equation shown as equation A.1 is used to demonstrate how equations are numbered in the appendix.

SIAM PROCEEDINGS SERIES MACROS 1

**1 Sample Mathematics and Text**  
 This short simple document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**1.1 In-line and Displayed Mathematics**  
 The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$(1) \quad \sum_{i=1}^{\infty} a_i$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $\theta_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (\theta_{n,k+1} - \theta_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} \theta_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below:

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2 Mathematics in section heads**  $\int_0^{\beta} \ln t dt$   
 Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3 Theorems, Lemmata, and Other Theorem-like Environments**  
 A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**LEMMA 1.1.** *Let  $f(z)$  be an analytic function in  $C_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in C_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$(2) \quad a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon.$$

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

*Proof.* Change  $z$  for  $1/z$ . Then  $\Gamma_r \rightarrow \bar{\Gamma}_r = \{z \in \mathbb{C}_- : \bar{z} \in \Gamma_r\}$  and

$$(3) \quad f(1/z) = a_0 + a_1 z + o(z).$$

Fix  $z \in \bar{\Gamma}_r$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (3) that

$$(4) \quad \frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z),$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_{r/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \bar{\Gamma}_{r/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ .

## 2 Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

### 2.1 Subsection Heading

This text appears under a subsection heading.

**2.1.1 Subsubsection Heading** This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

## 3 Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.
  - (a) A numbered list item under a list item.
 

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
  - (b) Another numbered list item under a list item.

i. Third level numbered list item under a list item.

A. Fourth and final level of numbered list items allowed.

- Bullet item 1.
- Bullet item 2.
  - Second level bullet item.
  - Third level bullet item.
    - Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

## 4 About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [3] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

2

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{T}_{r/2}$ , and hence by **Bunyip** Mythical beast of Australian Aboriginal legend, the Cauchy theorem (1.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{T}_{r/2}.$$

that implies (1.2) by substituting  $1/z$  back for  $z$ .

**2 Section Headings**  
Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

**2.1 Subsection Heading**This text appears under a subsection heading.

**2.1.1 Subsubsection Heading**This text appears under a subsubsection heading.

**Subsubsubsection Heading**This text appears under a subsubsubsubsection heading.

**3 Lists**  
Bulleted, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.
  - (a) A numbered list item under a list item.  
The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
  - (b) Another numbered list item under a list item.
    1. Third level numbered list item under a list item.
    - A. Fourth and final level of numbered list items allowed.

- Bullet item 1.
- Bullet item 2.
  - Second level bulleted item.
  - Third level bulleted item.
  - Fourth and final level bulleted item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**4 Tags**  
You can apply the logical markup tag *Emphasized*. You can apply the visual markup tags **Bold**, *Italics*, Roman, Sans Serif, Shaded, SMALL CAPS, and **Uppercase**.

You can apply the special, mathematics only tags **BLACKBOARD BOLD**, *CALIGRAPHIC*, and *fraktur*. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

You can apply the size tags *tiny*, *x-small*, *small*, *normalsize*, *large*, *Large*, *LARGE*, *huge* and *Huge*.

This is a Body Math paragraph. Each time you press the Enter key, Scientific WordPlace switches to mathematics mode. This is convenient for carrying out "scratchpad" computations.

Following is a group of paragraphs marked as Body Quote. This environment is appropriate for a short quotation or a sequence of short quotations.

The buck stops here. *Harry Truman*  
Ask not what your country can do for you; ask what you can do for your country. *John F Kennedy*  
I am not a crook. *Richard Nixon*  
It's no exaggeration to say the underside could go one way or another. *George Bush*

The Quotation tag is used for quotations of more than one paragraph. Following is the beginning of *Alice's Adventures in Wonderland* by Lewis Carroll

Alice was beginning to get very tired of sitting by her sister on the bank, and of having nothing to do: once or twice she had peeped into the book her sister was reading, but it had no pictures or conversations in it, "and what is the use of a book," thought Alice "without pictures or conversation?"

So she was considering in her own mind (as well as she could, for the hot day made her feel very sleepy and stupid), whether the pleasure of making a daisy-chain would be worth the trouble of getting up and picking the daisies, when suddenly a White Rabbit with pink eyes ran close by her.

There was nothing so very remarkable in that; nor did Alice think it so very much out

of the way to hear the Rabbit say to itself, "Oh dear! Oh dear! I shall be late!" (when she thought it over afterwards, it occurred to her that she ought to have wondered at this, but at the time it all seemed quite natural); but when the Rabbit actually took a watch out of its waistcoat-pocket, and looked at it, and then hurried on, Alice started to her feet, for it flashed across her mind that she had never before seen a rabbit with either a waistcoat-pocket, or a watch to take out of it, and burning with curiosity, she ran across the field after it, and fortunately was just in time to see it pop down a large rabbit-hole under the hedge.

In another moment down went Alice after it, never once considering how in the world she was to get out again.

#### 5 About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

**Abstract**

This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

1

**I. Sample Mathematics and Text**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**A. In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_n \rightarrow 0$  for each  $k$  and  $\gamma_n = \sum_{i=0}^{n-1} (a_{n+1} - a_{n,i})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{i=0}^{n-1} a_{n,i} T^i x$  converges weakly to a fixed point of  $T$ .<sup>1</sup>

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**B. Mathematics in section heads  $\int_a^b \ln t dt$**

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**C. Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

2

**Lemma 1** Let  $f(z)$  be an analytic function in  $C_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in C_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \in \Gamma_\varepsilon. \quad (2)$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in C_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (3)$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in C_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} a_{n+1} \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^n d\lambda}{(\lambda - z)^2} + R(z), \quad (4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} |o(|z|)| = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon / 2$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon / 2,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

## II. Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

### A. Subsection Heading

This text appears under a subsection heading.

#### 1. Subsubsection Heading

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

## III. Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.

- (a) A numbered list item under a list item. The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
- (b) Another numbered list item under a list item.

- i. Third level numbered list item under a list item.
  - A. Fourth and final level of numbered list items allowed.

- Bullet item 1.
- Bullet item 2.
  - Second level bullet item.
  - Third level bullet item.
  - Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

## IV. About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as<sup>4,5</sup> and<sup>6</sup>. You can also have multiple citations appear together. Here is an example.<sup>2,4</sup>

## Appendix A. An Appendix

Because appendices may contain material that is supplementary rather than integral to the main text, many styles use a different numbering system for equations that appear in the appendices.

$$\frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \quad (A1)$$

The quadratic equation shown as equation A1 is used to demonstrate how equations are numbered in the appendix.

## Similar to AIP - Modified

### Document class base file: article.cls

Options and Packages	Defaults
Document class options	Standard
Packages:	
sw20rui	None
aip	None

This shell is a modification of the Similar to AIP shell. It produces documents formatted for the American Institute of Physics. The aip package provides correct section numbering (e.g., II.B.2.) and it superscripts reference numbers in citations and bibliographies. The package presents three or more consecutive reference numbers as a range. Other package formatting involves the date, the abstract, paragraph indentation, equation numbering, and appendices.

**Abstract**

This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

1

**I. Sample Mathematics and Text**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**A. In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^n a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^n a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a non-expansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=1}^n (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=1}^n a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ .<sup>1</sup>

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**B. Mathematics in section heads  $\int_a^b \ln t dt$**

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**C. Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1.** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, \quad z \in \Gamma_\varepsilon. \tag{2}$$

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

2

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_r \rightarrow \bar{\Gamma}_r = \{z \in \mathbb{C}_- : \bar{z} \in \Gamma_r\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \bar{\Gamma}_r$  and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin z/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin z}{\sin z} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_{r/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \bar{\Gamma}_{r/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

## II. Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

### A. Subsection Heading

This text appears under a subsection heading.

#### 1. Subsubsection Heading

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

## III. Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.

(a) A numbered list item under a list item.

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.

- (b) Another numbered list item under a list item.
  - i. Third-level numbered list item under a list item.
    - A. Fourth and final level of numbered list items allowed.

- Bullet item 1.
- Bullet item 2.
  - Second level bullet item.
    - \* Third-level bullet item.
      - Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

## IV. About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as,<sup>45</sup> and.<sup>6</sup> You can also have multiple citations appear together. Here is an example:<sup>7-9</sup>

## V. Research Bibliography

<sup>1</sup>N. Dunford and J. Schwartz, *Functional Analysis*, v. 2, John Wiley and Sons, New York, 1963.

<sup>2</sup>Haustal, K. and Bellan, J., "Isolated fluid oxygen drop behavior in fluid hydrogen at rocket chamber pressures", *Int. J. Heat Mass Transfer*, 1998a, 41, 3537-3550

THE TITLE OF AN ARTICLE

**The Title of an Article**  
 DR. AUTHOR JONES  
 AT THIS ADDRESS

The Date

ABSTRACT. This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times \mathbf{F}) \cdot \mathbf{A} = z + 1$  in this abstract.

**1. Sample Mathematics and Text.** This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**1.1. In-line and Displayed Mathematics.** The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a non-expansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\tau_n = \sum_{k=1}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=1}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below:

$$\sin^2 \theta + \cos^2 \theta = 1$$

A long line above may depend on your margins:

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2. Mathematics in section heads**  $\int_0^1 t dt$ . Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3. Theorems, Lemmata, and Other Theorem-like Environments.** A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

THE TITLE OF AN ARTICLE

2

**LEMMA 1.** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_r = \{z \in \mathbb{C}_+ : 0 < \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_r. \tag{2}$$

**PROOF.** Change  $z$  for  $1/z$ . Then  $\Gamma_r \rightarrow \overline{\Gamma}_r = \{z \in \mathbb{C}_- : \pi \in \Gamma_r\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \overline{\Gamma}_r$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^n d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$|R(z)| \leq r^{-1} \max_{\lambda \in C_r(z)} |f(\lambda)| = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) = \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{2 \sin \varepsilon} \cdot O(|z|).$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty, z \in \overline{\Gamma}_r$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, z \in \overline{\Gamma}_r,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

**2. Section Headings.** Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

**2.1. Subsection Heading.** This text appears under a subsection heading.

**Subsubsection Heading.** This text appears under a subsubsection heading.

**Subsubsubsection Heading.** This text appears under a subsubsubsection heading.

**3. Lists.** Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.
- (a) A numbered list item under a list item.
 

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.

- (b) Another numbered list item under a list item.
  - i. Third level numbered list item under a list item.
    - A. Fourth and final level of numbered list items allowed.

- Bullet item 1.
- Bullet item 2.
  - Second level bullet item.
    - \* Third level bullet item.
    - . Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

**4. About the Bibliography.** Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

## Similar to North-Holland Journals

### Document class base file: article.cls

Options and Packages	Defaults
Document class options	Standard
Packages:	
sw20nhj	None

The shell creates documents for submission to the North-Holland journals. The package associated with the shell prints a description and date at the top right of the title area, which can be a separate page. The shell uses keywords, which appear after the abstract. The author's name and address appear at the left and below the abstract and keywords. Margins are generous.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), z \in \Gamma_\varepsilon. \tag{2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : z \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \bar{\Gamma}_\varepsilon$  and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^1 a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^n d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| \sin \varepsilon}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty, z \in \bar{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \bar{\Gamma}_\varepsilon/2,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

## 2 Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

### 2.1 Subsection Heading

This text appears under a subsection heading.

### 2.1.1 Subsubsection Heading

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

## 3 Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.

- (a) A numbered list item under a list item.

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.

- (b) Another numbered list item under a list item.

- i. Third level numbered list item under a list item.

- A. Fourth and final level of numbered list items allowed.

- Bullet item 1.

- Bullet item 2.

- Second level bullet item.

- \* Third level bullet item.

- Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

## 4 About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

ABSTRACT This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

CONTENTS

1	Sample Mathematics and Text	1
2	Section Headings	2
3	Lists	3
4	About the Bibliography	3
A	An Appendix	4

1. SAMPLE MATHEMATICS AND TEXT

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**1.1. In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1.1}$$

is displayed and automatically numbered as equation 1.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays<sup>1</sup>. The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below:

A long line above may depend on your margins:

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

1

**1.2. Mathematics in section heads**  $\int_0^1 \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3. Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1.** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{1.2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{1.3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (1.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^{n-2} d\lambda}{(\lambda - z)^2} + R(z), \tag{1.4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|h|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|h| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (1.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon/2,$$

that implies (1.2) by substituting  $1/z$  back for  $z$ . ■

2. SECTION HEADINGS

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

**2.1. Subsection Heading**

This text appears under a subsection heading.

**Subsubsection Heading**

This text appears under a subsubsection heading.

2

**Subsubsection Heading**

This text appears under a subsubsection heading.

**Subsubsubsection Heading**

This text appears under a subsubsubsection heading.

**3. LISTS**

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.
  - (a) A numbered list item under a list item.
 

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
  - (b) Another numbered list item under a list item.
    - i) Third level numbered list item under a list item.
      - A. Fourth and final level of numbered list items allowed.
- Bullet item 1.
- Bullet item 2.
  - Second level bullet item.
  - \* Third level bullet item.
    - . Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

**4. ABOUT THE BIBLIOGRAPHY**

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

**REFERENCES**

**A. AN APPENDIX**

Because appendices may contain material that is supplementary rather than integral to the main text, many styles use a different numbering system for equations that appear in the appendices.

$$\frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \tag{A.1}$$

The quadratic equation shown as equation A.1 is used to demonstrate how equations are numbered in the appendix.

**THE TITLE OF AN ARTICLE**

Dr. Author Jones  
At this Address

**ABSTRACT**

This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

**SAMPLE MATHEMATICS AND TEXT**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\|y_n - \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})T^k\| \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**Mathematics in section heads**  $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

**Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\epsilon = \{z \in \mathbb{C}_+ : 0 < \epsilon \leq \arg z \leq \pi - \epsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\epsilon. \tag{2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\epsilon \rightarrow \bar{\Gamma}_\epsilon = \{z \in \mathbb{C}_+ : \pi \in \Gamma_\epsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \bar{\Gamma}_\epsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_+ : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \epsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^n d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} |o(|z|)| = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \epsilon}{\sin \epsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_\epsilon$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, z \in \bar{\Gamma}_\epsilon,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

**SECTION HEADINGS**

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

**Subsection Heading**

**ABSTRACT**

This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

### 1 Sample Mathematics and Text

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

#### 1.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^n a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^n a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\|a_n\| = \sum_{k=0}^n (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^n a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ .<sup>1</sup>

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below:

---

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as well a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

### 1.2 Mathematics in section heads $\int_0^5 \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

### 1.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**LEMMA 1.** Let  $f(z)$  be an analytic function in  $C_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\epsilon = \{z \in C_+ : 0 < \epsilon \leq \arg z \leq \pi - \epsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\epsilon. \tag{2}$$

*Proof.* Change  $z$  for  $1/z$ . Then  $\Gamma_\epsilon \rightarrow \bar{\Gamma}_\epsilon = \{z \in C_- : \pi \in \Gamma_\epsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \bar{\Gamma}_\epsilon$ , and let  $C_r(z) = \{\lambda \in C_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \epsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^1 a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^n d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} O(|z| + r) = \frac{1 + \sin \epsilon}{\sin \epsilon} O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_{\epsilon/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \bar{\Gamma}_{\epsilon/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ .  $\blacksquare$

## 2 Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

### 2.1 Subsection Heading

This text appears under a subsection heading.

#### 2.1.1 Subsubsection Heading

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

## 3 Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
  2. Numbered list item 2.
    - (a) A numbered list item under a list item.  
The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
    - (b) Another numbered list item under a list item.
      - i. Third level numbered list item under a list item.
        - A. Fourth and final level of numbered list items allowed.
- Bullet item 1.
  - Bullet item 2.
    - Second level bullet item.

**ABSTRACT**

This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

**1 Sample Mathematics and Text**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**1.1 In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^+ \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ .<sup>1</sup>

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>2</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2 Mathematics in section heads**  $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3 Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

LEMMA 1. Let  $f(z)$  be an analytic function in  $C_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\epsilon = \{z \in C_+ : 0 < \arg z \leq \pi - \epsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), z \rightarrow \infty, z \in \Gamma_\epsilon. \tag{2}$$

Proof. Change  $z$  for  $1/z$ . Then  $\Gamma_\epsilon \rightarrow \bar{\Gamma}_\epsilon = \{z \in C_+ : \pi \in \Gamma_\epsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \bar{\Gamma}_\epsilon$ , and let  $C_r(z) = \{\lambda \in C_+ : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \epsilon / 2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} |o(|z|)| = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \epsilon}{\sin \epsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty, z \in \bar{\Gamma}_{\epsilon/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \bar{\Gamma}_{\epsilon/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ . **D**

## 2 Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

### 2.1 Subsection Heading

This text appears under a subsection heading.

#### 2.1.1 Subsubsection Heading

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

## 3 Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.

(a) A numbered list item under a list item.

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.

(b) Another numbered list item under a list item.

i. Third level numbered list item under a list item.

A. Fourth and final level of numbered list items allowed.

- Bullet item 1.
- Bullet item 2.
- Second level bullet item.
- \* Third level bullet item.
- . Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

## 4 About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as<sup>4,5</sup> and<sup>6</sup>. You can also have multiple citations appear together. Here is an example:<sup>2,4</sup>

## 5 REFERENCES

## An Appendix

Because appendices may contain material that is supplementary rather than integral to the main text, many styles use a different numbering system for equations that appear in the appendices.

$$\frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \tag{5}$$

The quadratic equation shown as equation 5 is used to demonstrate how equations are numbered in the appendix.

<sup>1</sup>Affiliation1, Address, City, Country

<sup>2</sup>Affiliation2, Short Version of a Long Address, City, Country

**ABSTRACT**

This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

**Keywords:** Manuscript format, template, SPIE Proceedings, LaTeX

**1. SAMPLE MATHEMATICS AND TEXT**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**1.1. In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{n-1} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $J_n x = \sum_{k=0}^{n-1} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ .

\*Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mat hematical displays. \* The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2. Mathematics in section heads**  $\int_0^2 \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

B.B.B.: E-mail: bbbs@fake.edu, Telephone: +33 (0)1 98 76 54 32, Address: A Very Long Address, City, Country

\*L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

**1.3. Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**LEMMA 1.1.** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_r = \{z \in \mathbb{C}_+ : 0 < z \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_r. \tag{2}$$

*Proof.* Change  $z$  for  $1/z$ . Then  $\Gamma_r \rightarrow \overline{\Gamma}_r = \{z \in \mathbb{C}_- : \overline{\Gamma} \in \Gamma_r\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \overline{\Gamma}_r$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^n d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} |o(|z|)| = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_r$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_r,$$

that implies (2) by substituting  $1/z$  back for  $z$ .  $\square$

**2. SECTION HEADINGS**

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

**2.1. Subsection Heading**

This text appears under a subsection heading.

**2.1.1. Subsubsection Heading**

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

### 3. LISTS

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
  2. Numbered list item 2.
    - (a) A numbered list item under a list item.  
The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
    - (b) Another numbered list item under a list item.
      - i. Third level numbered list item under a list item.
        - A. Fourth and final level of numbered list items allowed.
- Bullet item 1.
  - Bullet item 2.
    - Second level bullet item.
    - \* Third level bullet item.
    - Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

*1.3 Theorems, Lemmata, and Other Theorem-like Environments*

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $I_\alpha = \{z \in \mathbb{C}_+ : 0 < \arg z \leq \alpha - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \in I_\alpha. \tag{2}$$

*Proof* Change  $z$  for  $1/z$ . Then  $I_\alpha \rightarrow \bar{I}_\alpha = \{z \in \mathbb{C}_+ : z \in I_\alpha\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

<sup>1</sup> L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line length.

The Title of an Article 3

Fix  $z \in \mathbb{T}_r$ , and let  $C_r(z) = \{\lambda \in \mathbb{C} : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin z/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=2}^{\infty} a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^{n-2} d\lambda}{(\lambda - z)^2} + R(z), \quad (4)$$

where for the remainder  $R(z)$  we have

$$|R(z)| \leq r^{-1} \max_{\lambda \in C_r(z)} |f(\lambda)| = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) = \frac{|z| + r}{r} O(|z| + r) = \frac{1 + \sin z}{\sin z} O(|z|).$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \mathbb{T}_{r/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, \quad z \in \mathbb{T}_{r/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ .

#### The Title of an Article

Dr. Author Jones  
At this Address

#### Abstract

This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

### 1 Sample Mathematics and Text

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

#### 1.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^n a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^n a_i \quad (1)$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that  $n \rightarrow \infty$ ,  $a_{k,n} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=1}^n (a_{k,n} z_1 + \dots + a_{k,n} z_n)^2 \rightarrow 0$ . Then for each  $z$  in  $C$ ,  $A_n z = \sum_{k=1}^n a_{k,n} T^k z$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below:

$$\sin^2 \theta + \cos^2 \theta = 1$$

A long line above may depend on your margins:

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

#### 1.2 Mathematics in section heads $\int_0^2 \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or tables of contents entries.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

### 1.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \quad (2)$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (3)$$

Fix  $z \in \overline{\Gamma}_\varepsilon$  and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^1 a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^n d\lambda}{(\lambda - z)^2} + R(z), \quad (4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon/2,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

## 2 Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

### 2.1 Subsection Heading

This text appears under a subsection heading.

#### 2.1.1 Subsubsection Heading

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

### 3 Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.
  - (a) A unnumbered list item under a list item.  
The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
  - (b) Another numbered list item under a list item.
    1. Third level numbered list item under a list item.
      - A. Fourth and final level of numbered list items allowed.
- Bullet item 1.
- Bullet item 2.
  - Second level bullet item.
  - \* Third level bullet item.
  - Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

The Title of a Standard L<sup>A</sup>T<sub>E</sub>X Article  
using the Chicago Bibliography System

Dr. Auther Jones  
At this Address  
July 22, 2004

**Abstract**  
We study the effects of warm water on the local penguin population. The major finding is that it is extremely difficult to induce penguins to drink warm water. The success factor is approximately  $-e^{-1} - 1$ .

**1 Sample Mathematics and Text**

This short sample document illustrates the typical appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a bibliography and citations created using the Chicago BibT<sub>E</sub>X bibliography style.

**1.1 In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ ; and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ .

Two sets of B<sub>H</sub>X parameters govern mathematical displays. The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

1

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2 Mathematics in section heads**  $\int_0^2 \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3 Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $C_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in C_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon, \tag{2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in C_+ : \overline{\Gamma}_\varepsilon \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $\varepsilon \in \overline{\Gamma}_\varepsilon$ , and let  $C_\varepsilon(z) = \{\lambda \in C_+ : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} \frac{a_n}{2\pi i} \int_{C_\varepsilon(z)} \frac{(\lambda - z)^{n-2} d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_\varepsilon(z)} o(|z|) = r^{-1} \max_{\lambda \in C_\varepsilon(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_{\varepsilon/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_{\varepsilon/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

2

**2 Section Headings**

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

**2.1 Subsection Heading**

This text appears under a subsection heading.

**2.1.1 Subsubsection Heading**

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

**2.2 Compiling a Bibliography**

1. Save this document using a name of your choosing.
2. Choose *Typeset, Compile*.
3. Check *Generate a Bibliography*.
4. Choose *OK*.
5. Choose *Typeset, Preview*.

**2.3 Citations in the Chicago System**

The Chicago package also supports a number of other mechanisms for citations. These mechanisms are not supported directly through the SW interface. They are entered as TeX fields. Here are some examples that you can copy and modify.

1. Full author list and year, but without enclosing parentheses: Knuth 1981
2. Full author list, no parentheses: Knuth
3. Full author list without parentheses: Knuth
4. Full author list, no parentheses around authors, parentheses around year: Knuth (1981)
5. Abbreviated author list and year: Knuth 1981
6. Abbreviated author list and year, no parentheses: Knuth 1981

7. Abbreviated author list, no parentheses: Knuth
8. Abbreviated author list, no parentheses: Knuth
9. Abbreviated author list and year, parentheses around year: Knuth (1981)
10. Year information only, with parentheses: (1981)
11. Year information only, without parentheses: 1981

April 18, 2003

**Abstract**  
We study the effects of warm water on the local penguin population. The major finding is that it is extremely difficult to induce penguins to drink warm water. The success factor is approximately  $-e^{-x-1}$ .

**1 Sample Mathematics and Text**

This short sample document illustrates the typical appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a bibliography and citations created using the Chicago BibT<sub>E</sub>X bibliography style.

**1.1 In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ ; and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ .

Two sets of B<sub>H</sub>T<sub>E</sub>X parameters govern mathematical displays. The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

1

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2 Mathematics in section heads**  $\int_0^2 \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3 Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $C_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in C_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in C_- : \pi \in \bar{\Gamma}_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in C_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} \frac{a_n}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^{-n} d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_{\varepsilon/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \bar{\Gamma}_{\varepsilon/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

## 2 Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

### 2.1 Subsection Heading

This text appears under a subsection heading.

#### 2.1.1 Subsubsection Heading

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

### 2.2 Compiling a Bibliography

1. Save this document using a name of your choosing.
2. Choose Typeset, Compile.
3. Check Generate a Bibliography.
4. Choose OK.
5. Choose Typeset, Preview.

### 2.3 Citations in the Harvard System

The standard citation mechanism that is supported by the SW Insert, Field, Citation mechanism is the parenthetical citation form, using the L<sup>A</sup>T<sub>E</sub>X macro `\cite` and is as follows:

As (Pitson 1978) and (Kopka and Daly 1993, Annex B) describe . . .

#### 2.3.1 `\citemonum`

The Harvard package also supports using a citation as a noun using the L<sup>A</sup>T<sub>E</sub>X macro `\citemonum`. These mechanisms are not supported directly through the SW interface. They are entered as TeX fields. Here are some examples that you can copy and modify.

As Pitson (1978) and Lampport (1986, Annex B) describe . . .

#### 2.3.2 `\possessivecite`

You can use the citation as a possessive noun phrase with the L<sup>A</sup>T<sub>E</sub>X macro `\possessivecite`. Multiple citations are not permitted.  
Lampport's (1986) description of this feature is . . .

#### 2.3.3 `\citeaffixed`

You can use the L<sup>A</sup>T<sub>E</sub>X macro `\citeaffixed` command to allow text to be affixed inside the beginning of a parenthetical citation.  
BibTeX manuals (e.g. Lampport 1986, Pitson 1978) describe . . .

 Keywords and Phrases: Sequential analysis

Dr. A. U. THOR 2

**1. Sample Mathematics and Text**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**1.1. In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1.1}$$

is displayed and automatically numbered as equation 1.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{n-1} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{n-1} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2. Mathematics in section heads**  $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3. Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**LEMMA 1.** Let  $f(z)$  be an analytic function in  $C_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in C_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, \quad z \in \Gamma_\varepsilon. \tag{1.2}$$

---

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

Dr. A. U. THOR

3

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_r \rightarrow \overline{\Gamma}_r = \{z \in \mathbb{C} : |z| = r\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (1.3)$$

Fix  $z \in \overline{\Gamma}_r$  and let  $C_r(z) = \{\lambda \in \mathbb{C} : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (1.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^1 a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^n d\lambda}{(\lambda - z)^2} + R(z), \quad (1.4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda - O(|z| + r)| \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_{r/2}$ , and hence by the Cauchy theorem (1.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_{r/2},$$

that implies (1.2) by substituting  $1/z$  back for  $z$ . ■

## 2. Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

### 2.1. Subsection Heading

This text appears under a subsection heading.

**Subsubsection Heading.** This text appears under a subsubsection heading.

**Subsubsubsection Heading.** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading.** This text appears under a subsubsubsubsection heading.

## 3. Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
  2. Numbered list item 2.
    - (a) A numbered list item under a list item.
 

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
    - (b) Another numbered list item under a list item.
      - i. Third level numbered list item under a list item.
        - A. Fourth and final level of numbered list items allowed.
- Bullet item 1.

Dr. A. U. THOR

4

- Bullet item 2.

– Second level bullet item.

• Third level bullet item.

– Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

## 4. About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

### A. An Appendix

Because appendices may contain material that is supplementary rather than integral to the main text, many styles use a different numbering system for equations that appear in the appendices.

$$\frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \quad (A.1)$$

The quadratic equation shown as equation A.1 is used to demonstrate how equations are numbered in the appendix.

The Title of an Article

---

**Abstract**

This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

**1 Sample Mathematics and Text**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**1.1 In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=1}^n (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=1}^n a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2 Mathematics in section heads**  $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

1

**1.3 Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_-, z \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_\varepsilon(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} a_n \frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{(\lambda - z)^n d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$|R(z)| \leq r^{-1} \max_{\lambda \in C_\varepsilon(z)} o(|z|) = r^{-1} \max_{\lambda \in C_\varepsilon(z)} |\lambda| \cdot O(|z| + r) = \frac{|z| + r}{r} O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} O(|z|).$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon/2,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

**2 Section Headings**

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

**2.1 Subsection Heading**

This text appears under a subsection heading.

**2.1.1 Subsubsection Heading**

This text appears under a subsubsection heading.

**Subsubsubsection Heading**

This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading**

This text appears under a subsubsubsubsection heading.

2

**3 Lists**

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.
  - (a) A numbered list item under a list item.
 

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
  - (b) Another numbered list item under a list item.
    - i. Third level numbered list item under a list item.
      - A. Fourth and final level of numbered list items allowed.
- Bullet item 1.
- Bullet item 2.
  - Second level bullet item.
  - Third level bullet item.
    - Fourth and final level bullet item.

**Description List:** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip:** Mythical beast of Australian Aboriginal legends.

**4 About the Bibliography**

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [1], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

The Title of an Article

---

Dr. Author Jones  
At this Address  
July 23, 2004

**Abstract**

This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\forall \times F)$ ,  $k = z + 1$  in this abstract.

**1 Sample Mathematics and Text**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**1.1 In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^n a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^n a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

1

**1.2 Mathematics in section heads**  $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3 Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right)$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \bar{\Gamma}_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^{n-2} d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$|R(z)| \leq r^{-1} \max_{\lambda \in C_r(z)} o(|\lambda|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) = \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{|z| + 2r}{\sin \varepsilon} \cdot O(|z| + r).$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, z \in \bar{\Gamma}_\varepsilon/2,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

**2 Section Headings**

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

**2.1 Subsection Heading**

This text appears under a subsection heading.

2

## 2.1.1 Subsubsection Heading

This text appears under a subsubsection heading.

**Subsubsection Heading** This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

## 3 Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.

(a) A numbered list item under a list item.

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.

(b) Another numbered list item under a list item.

i. Third level numbered list item under a list item.

A. Fourth and final level of numbered list items allowed.

- Bullet item 1.
- Bullet item 2.

– Second level bullet item.

\* Third level bullet item.

- Fourth and final level bullet item.

**Description List :** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip :** Mythical beast of Australian Aboriginal legends.

## 4 About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

**THE TITLE OF AN ARTICLE**

DR. AUTHOR JONES  
At this Address

This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

**1 Sample Mathematics and Text** A long line above may depend on your margins

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a minimal bibliography and an appendix.

*1.1 In-line and Displayed Mathematics*

The expression  $\sum_{k=1}^{\infty} a_k$  is in-line mathematics, while the numbered equation

$$\sum_{k=1}^{\infty} a_k \quad (1)$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ .

Two sets of  $\text{\TeX}$  parameters govern mathematical displays<sup>1</sup>. The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below:

$$x^2 + y^2 = z^2$$

<sup>1</sup> $\text{\TeX}$  automatically selects the spacing depending on the surrounding line lengths.

*1.2 Mathematics in section heads*

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

*1.3 Theorems, Lemmata, and Other Theorem-like Environments*

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \quad (2)$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (3)$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r =$

For Publisher's use

$|z| \sin \varepsilon / 2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \quad (4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} |f(\lambda)| \\ &= r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) \\ &= \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_{\varepsilon/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1,$$

as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_{\varepsilon/2}$ .

that implies (2) by substituting  $1/z$  back for  $z$ . ■

**2 Section Headings**

Use the Section tag for major sections, such as the one just above. This typesetting specification provides only for the additional level of subsection, shown below.

*2.1 Subsection Heading*

This text appears under a subsection heading.

**3 Lists**

Bulleted, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.

- (a) A numbered list item under a list item.
  - The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
- (b) Another numbered list item under a list item.
  - i. Third level numbered list item under a list item.
  - A. Fourth and final level of numbered list items allowed.
    - Bullet item 1.
    - Bullet item 2.
    - Second level bullet item.
    - Third level bullet item.
    - Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

**4 Tags**

You can apply the logical markup tag *Emphasized*.

You can apply the visual markup tags **Bold**, *Italic*, Roman, Sans Serif, Slanted, SMALL CAPS, and **Typewriter**.

You can apply the special, mathematics only, tags **BLACKBOARD BOLD**, **CALLEDGRAPHIC**, and **fraktur**. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

For Publisher's use

You can apply the size tags *small*, *supersize*, *font-size: small*, *normal-size*, *large*, **LARGE**, *huge* and **Huge**.

This is a Bold Math paragraph. Each time you press the Enter key, Scientific WorkPlace switches to mathematics mode. This is convenient for carrying out "scratchpad" computations.

Following is a group of paragraphs marked as Short Quote. This environment is appropriate for a short quotation or a sequence of short quotations.

The buck stops here. *Harry Truman*

DR. AUTHOR JONES  
At this Address

This article illustrates many features of a mathematics article, but we do not explain the spurious appearance of the formula  $(\nabla \times F) \cdot k = z + 1$  in this abstract.

**1 Sample Mathematics and Text**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**1.1 In-line and Displayed Mathematics**

The expression  $\sum_{k=1}^{\infty} a_k$  is in-line mathematics, while the numbered equation

$$\sum_{k=1}^{\infty} a_k \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ .

Two sets of  $\text{\TeX}$  parameters govern mathematical displays.<sup>4</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

<sup>4</sup>  $\text{\TeX}$  automatically selects the spacing depending on the surrounding line lengths.

**1.2 Mathematics in section heads**  $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3 Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $C_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in C_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \in \Gamma_\varepsilon. \tag{2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in C_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_\varepsilon(z) = \{\lambda \in C_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} a_m \frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

2

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_\varepsilon(z)} o(|z|) \\ &= r^{-1} \max_{\lambda \in C_\varepsilon(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) \\ &= \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_{\varepsilon/2}$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_{\varepsilon/2},$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

**2 Section Headings**

The quadratic equation shown as equation 5 is used to demonstrate how equations are numbered in the appendix.

# 3 Author Packages for AMS Shells

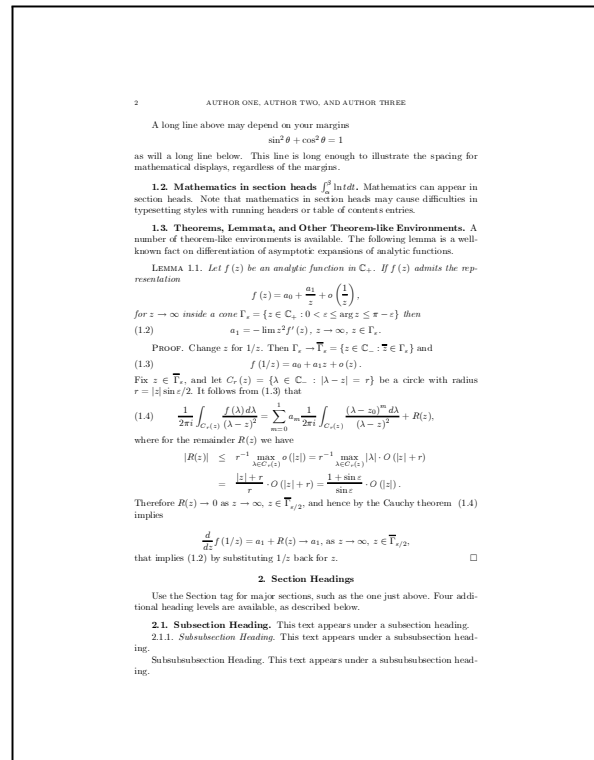

The shell documents in the directory Author Packages for AMS Shells are available for creating documents suitable for sending to the American Mathematical Society. See <http://www.ams.org/tex/author-info.html> for a complete list of publications.

## Contemporary Mathematics (Proceedings)

### Document class base file: conm-p-l.cls

Options and Packages	Defaults
Document class options	None
Packages:	
None	

The shell produces documents that follow the typesetting specifications of the publication *Contemporary Mathematics (Proceedings)* from the American Mathematical Society.

SHORT TITLE 3

Subsubsection Heading. This text appears under a subsubsection heading.

### 3. Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

- (1) Numbered list item 1.
- (2) Numbered list item 2.
  - (a) A numbered list item under a list item.
 

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
  - (b) Another numbered list item under a list item.
    - (3) Third level numbered list item under a list item.
      - (A) Fourth and final level of numbered list items allowed.

- Bullet item 1.
- Bullet item 2.
  - Second level bullet item.
    - \* Third level bullet item.
      - Fourth and final level bullet item.

**Description List:** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip:** Mythical beast of Australian Aboriginal legends.

### 4. About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

# 4 Book Shells

Most book shells are based on the typesetting specifications set in one of two base document classes—`book.cls` or `report.cls`. The program uses several other `.cls` files for customized book shells. Book shells generally have extensive front and back matter. The shells produce documents with up to five heading levels defined for the body of the document, in addition to chapters and, in some cases, parts. The typesetting specifications for many book shells add blank pages where necessary so that chapters and chapter-like elements begin on odd-numbered pages. In this chapter, we include many pages of each sample book so that you can see the many different kinds of pages included in a single shell.

See page 2 for information about base document class defaults and see page 4 for page layout diagrams for the base document classes.

## AMS Book or Monograph

### Document class base file: amsbook.cls

Options and Packages    Defaults

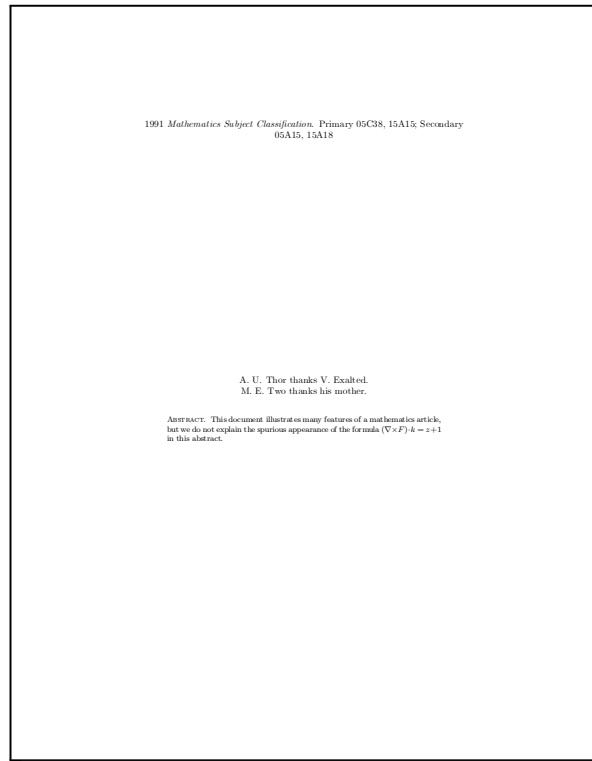

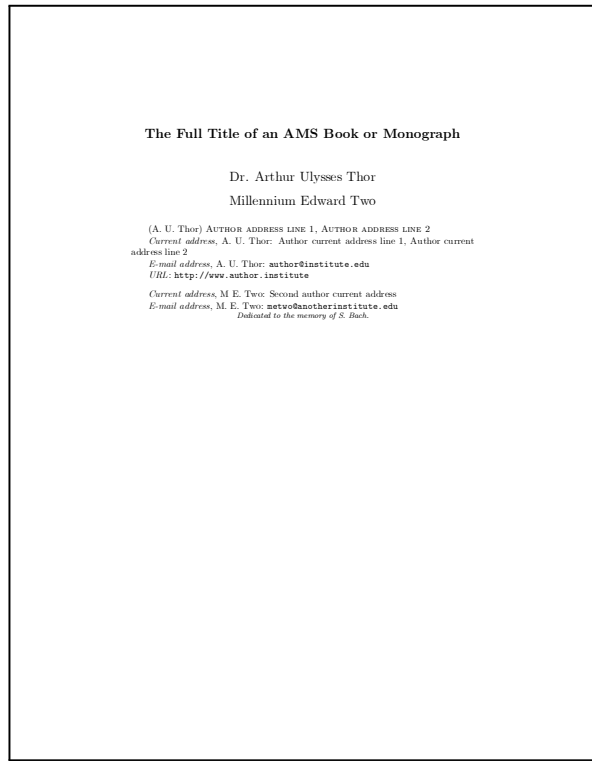

Document class options    Standard

Packages:

None

The front matter contains a frontmatter environment. Front matter fields include a short title, multiple addresses, email address, URL address, thanks, dedication, and  $\mathcal{AMS}$  classification. The preface is an unnumbered chapter in the body of the document.

This shell automatically adds blank pages after the table of contents and preface and where necessary to ensure that new chapters begin on odd-numbered pages. Blank pages carry no headers or page numbers and are not shown here.

3. Theorems, Lemmata, and Other Theorem-like Environments	3
4. Section Headings	4
5. Tags	4
6. Lists	5
7. About the Bibliography	5
Appendix A. The First Appendix	7
Appendix. Afterword	9
Appendix. Bibliography	11

**Preface**

This is the preface and it is created using a TeX field in a paragraph by itself containing `\chapter*{Preface}`. When the document is loaded, this appears in the edit window like a normal chapter, but it is actually an unnumbered chapter.

CHAPTER 1

**Introduction**

The introduction is entered using the usual chapter tag. Since the introduction chapter appears before the `\mainmatter` TeX field, it is an unnumbered chapter. The primary difference between the preface and the introduction in this shell document is that the introduction will appear in the table of contents and the page headings for the introduction are automatically handled without the need for the `\markboth` TeX field. You may use either or both methods to create chapters at the beginning of your document. You may also delete these preliminary chapters.

CHAPTER 2

**Purpose of this Document**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

CHAPTER 3

Sample Mathematics and Text

1. In-line and Displayed Mathematics

The expression  $\sum_{k=1}^n a_k$  is in-line mathematics, while the numbered equation (1.1)

is displayed and automatically numbered as equation 1.1. Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{n-1} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{n-1} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of  $\LaTeX$  parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:  $x^2 + y^2 = z^2$

and a short line below:  $\sin^2 \theta + \cos^2 \theta = 1$

A long line above may depend on your margins as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

2. Mathematics in section heads  $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

3. Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

LEMMA 1. Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right).$$

<sup>1</sup> $\LaTeX$  automatically selects the spacing depending on the surrounding line lengths.

3. SAMPLE MATHEMATICS AND TEXT

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\epsilon = \{z \in \mathbb{C}_+ : 0 < \epsilon \leq \arg z \leq \pi - \epsilon\}$  then (3.1)

$a_1 = -\lim_{z \rightarrow \infty} z f'(z)$ ,  $z \rightarrow \infty$ ,  $z \in \Gamma_\epsilon$ .  
PROOF. Change  $z$  for  $1/z$ . Then  $\Gamma_\epsilon \rightarrow \overline{\Gamma}_\epsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\epsilon\}$  and (3.2)

$f(1/z) = a_0 + a_1 z + o(z)$ .  
Fix  $z \in \overline{\Gamma}_\epsilon$ , and let  $C_\epsilon(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \epsilon/2$ . It follows from (3.2) that

$$(3.3) \quad \frac{1}{2\pi i} \int_{C_\epsilon(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^1 a_n \frac{1}{2\pi i} \int_{C_\epsilon(z)} \frac{(\lambda - z)^{n-2} d\lambda}{(\lambda - z)^2} + R(z),$$

where for the remainder  $R(z)$  we have  
 $|R(z)| \leq r^{-1} \max_{\lambda \in C_\epsilon(z)} |o(|z|)| = r^{-1} \max_{\lambda \in C_\epsilon(z)} |\lambda| \cdot O(|z| + r)$   
 $= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \epsilon}{\sin \epsilon} \cdot O(|z|)$ .

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\epsilon/2$ , and hence by the Cauchy theorem (3.3) implies

$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1$ , as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\epsilon/2$ .  
that implies (3.1) by substituting  $1/z$  back for  $z$ .  $\square$

4. Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

4.1. Subsection Heading. This text appears under a subsection heading.

4.1.1. Subsubsection Heading. This text appears under a subsubsection heading.

Subsubsubsection Heading. This text appears under a subsubsubsection heading.

Subsubsubsubsection Heading. This text appears under a subsubsubsubsection heading.

5. Tags

You can apply the logical markup tag *Emphasized*.  
You can apply the visual markup tags **Bold**, *Italic*, Roman, *Sans Serif*, *Slanted*, SMALL CAPS, and `Typewriter`.  
You can apply the special, mathematics only, tags **BLACKBOARD BOLD**, *CALIGRAPHIC*, and *Fraktur*. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.  
You can apply the size tags *tiny*, *scriptsize*, *footnotesize*, *small*, *normalsize*, *large*, *Large*, *LARGE*, *huge* and *Huge*.  
Following is a group of paragraphs marked as *Body Quote*. This environment is appropriate for a short quotation or a sequence of short quotations.

7. ABOUT THE BIBLIOGRAPHY

The buck stops here. *Harry Truman*  
Ask not what your country can do for you; ask what you can do for your country. *John F. Kennedy*  
I am not a crook. *Richard Nixon*  
It's no exaggeration to say the underdogs could go one way or another. *George Bush*

6. Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

- (1) Numbered list item 1.
- (2) Numbered list item 2.
- (a) A numbered list item under a list item.

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.

- (b) Another numbered list item under a list item.
  - (i) Third level numbered list item under a list item.
    - (A) Fourth and final level of numbered list items allowed.

- Bullet item 1.
  - Second level bullet item.
    - \* Third level bullet item.
      - Fourth and final level bullet item.

**Description List:** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip:** Mythical beast of Australian Aboriginal legends.

7. About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

APPENDIX A

The First Appendix

The appendix fragment is used only once. Subsequent appendices can be created using the Chapter Section/Body Tag.

### Afterword

The back matter often includes one or more of an index, an afterword, acknowledgements, a bibliography, a colophon, or any other similar item. In the back matter, chapters do not produce a chapter number, but they are entered in the table of contents. If you are not using anything in the back matter, you can delete the back matter TOX field and everything that follows it.

CT **Preface**

This is the preface and it is created using a TeX field in a paragraph by itself containing `\chapter*{Preface}`. When the document is loaded, this appears in the edit window like a normal chapter, but it is actually an unnumbered chapter. The `markboth` TeX field at the beginning of this paragraph sets the correct page heading for the Preface portion of the document. The preface does not appear in the table of contents.

iv

CN **Chapter 1**

CT **Introduction**

The introduction is entered using the usual chapter tag. Since the introduction chapter appears before the `mainmatter` TeX field, it is an unnumbered chapter. The primary difference between the preface and the introduction in this shell document is that the introduction will appear in the table of contents and the page headings for the introduction are automatically handled without the need for the `markboth` TeX field. You may use either or both methods to create chapters at the beginning of your document. You may also delete these preliminary chapters.

v

CHAPTER 1 — MANUSCRIPT

vi

CN **Chapter 2**

CT **Purpose of this Document**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section loadings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

1

CN **Chapter 3**

CT **Sample Mathematics and Text**

A **3.1 In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{3.1}$$

is displayed and automatically numbered as equation 3.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^+ \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of  $\LaTeX$  parameters govern mathematical displays.<sup>1</sup> The spacing

<sup>1</sup> $\LaTeX$  automatically selects the spacing depending on the surrounding line lengths.

CHAPTER 3 — MANUSCRIPT

above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

A **3.2 Mathematics in section heads**  $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

A **3.3 Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

CHAPTER 3 — MANUSCRIPT

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{3.2}$$

G *Proof.* Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \bar{\Gamma}_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3.3}$$

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (3.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^n d\lambda}{(\lambda - z)^2} + R(z), \tag{3.4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (3.4)

implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \bar{\Gamma}_\varepsilon/2,$$

that implies (3.2) by substituting  $1/z$  back for  $z$ . ■

CHAPTER 3 — MANUSCRIPT

A **3.4 Section Headings**

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

B **3.4.1 Subsection Heading**

This text appears under a subsection heading.

C **Subsubsection Heading**

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

## Linda Gilbert Book

### Document class base file: book.cls

Options and Packages	Defaults
Document class options	Body text 12 pt
Packages:	
sw20gilb	None

This shell automatically adds blank pages where necessary to ensure that new chapters begin on odd-numbered pages. Blank pages carry no headers or page numbers and are not shown here. The page number for the table of contents always starts at page five and the preface starts at page nine, both marked using lower case Roman numerals. Appendices are not numbered. Objects inside appendices that use the appendix number (like equation numbers) are not numbered correctly. Appendix numbers can be restored by adding a TeX field containing “renewcommand–“thechapter”–“Alph–chapter”” immediately following the “appendix TeX field.

## Preface

This is the preface and it is created using a TeX field in a paragraph by itself containing `\chapter*{Preface}`. When the document is loaded, this appears in the edit window like a normal chapter, but it is actually an unnumbered chapter. The `markboth` TeX field at the beginning of this paragraph sets the correct page heading for the Preface portion of the document. The preface does not appear in the table of contents.

## Introduction

The introduction is entered using the usual chapter tag. Since the introduction chapter appears before the `mainmatter` TeX field, it is an unnumbered chapter. The primary difference between the preface and the introduction in this shell document is that the introduction will appear in the table of contents and the page headings for the introduction are automatically handled without the need for the `markboth` TeX field. You may use either or both methods to create chapters at the beginning of your document. You may also delete these preliminary chapters.

## Chapter 1

### Purpose of this Document

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

## Chapter 2

### Sample Mathematics and Text

#### 2.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \quad (2.1)$$

is displayed and automatically numbered as equation 2.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

## 2.2 Mathematics in section heads $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

## 2.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \quad (2.2)$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi - \varepsilon \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (2.3)$$

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (2.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \quad (2.4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (2.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, z \in \bar{\Gamma}_\varepsilon/2,$$

that implies (2.2) by substituting  $1/z$  back for  $z$ . ■

## 2.4 Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

### 2.4.1 Subsection Heading

This text appears under a subsection heading.

#### Subsubsection Heading

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

## 2.5 Tags

You can apply the logical markup tag *Emphasized*.

You can apply the visual markup tags **Bold**, *Italics*, Roman, **Sans Serif**, *Slanted*, **SMALL CAPS**, and **Typewriter**.

You can apply the special, mathematics only, tags **BLACKBOARD BOLD**, *CALIGRAPHIC*, and *fraktur*. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

You can apply the size tags *small*, *scriptsize*, *footnotesize*, *small*, *normalsize*, *large*, *Large*, *LARGE*, *huge* and *Huge*.

- Bullet item 2.
  - Second level bullet item.
    - Third level bullet item.
      - Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

## 2.7 About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

## Appendix

### The First Appendix

The appendix fragment is used only once. Subsequent appendices can be created using the Chapter Section/Body Tag.

## Afterword

The back matter often includes one or more of an index, an afterword, acknowledgements, a bibliography, a colophon, or any other similar item. In the back matter, chapters do not produce a chapter number, but they are entered in the table of contents. If you are not using anything in the back matter, you can delete the back matter TeX field and everything that follows it.

## Sample Mathematics and Text

### 1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^n a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^n a_i \quad (2.1)$$

is displayed and automatically numbered as equation 2.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>†</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

### 2 Mathematics in section heads $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

### 3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic

<sup>†</sup> L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

## 4 2. Sample Mathematics and Text

functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \quad (2.2)$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (2.3)$$

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (2.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} \frac{a_n}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^{n-2} d\lambda}{(\lambda - z)^2} + R(z), \quad (2.4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (2.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \bar{\Gamma}_\varepsilon/2,$$

that implies (2.2) by substituting  $1/z$  back for  $z$ . ■

### Preface

This textbook is intended for use by students of physics, physical chemistry, and theoretical chemistry. The reader is presumed to have a basic knowledge of atomic and quantum physics at the level provided, for example, by the first few chapters in our book *The Physics of Atoms and Quanta*. The student of physics will find here material which should be included in the basic education of every physicist. This book should furthermore allow students to acquire an appreciation of the breadth and variety within the field of molecular physics and its future as a fascinating area of research.

For the student of chemistry, the concepts introduced in this book will provide a theoretical framework for that entire field of study. With the help of these concepts, it is at least in principle possible to reduce the enormous body of empirical chemical knowledge to a few basic principles: those of quantum mechanics. In addition, modern physical methods whose fundamentals are introduced here are becoming increasingly important in chemistry and now represent indispensable tools for the chemist. As examples, we might mention the structural analysis of complex organic compounds, spectroscopic investigation of very rapid reaction processes or, as a practical application, the remote detection of pollutants in the air.

**Abstract.** The abstract should summarize the contents of the paper using at least 70 and at most 150 words. It will be set in 9-point font size and be inset 1.0 cm from the right and left margins. There will be two blank lines before and after the Abstract . . .

**1 Fixed-Period Problems: The Sublinear Case**

With this chapter, the preliminaries are over, and we begin the search for periodic solutions to Hamiltonian systems. All this will be done in the convex case; that is, we shall study the boundary-value problem

$$\begin{aligned} \dot{x} &= JH'(t, x) \\ x(0) &= x(T) \end{aligned}$$

with  $H(t, \cdot)$  a convex function of  $x$ , going to  $+\infty$  when  $\|x\| \rightarrow \infty$ .

**1.1 Autonomous Systems**

In this section, we will consider the case when the Hamiltonian  $H(x)$  is autonomous. For the sake of simplicity, we shall also assume that it is  $C^1$ .

We shall first consider the question of nontriviality, within the general framework of  $(A_\infty, B_\infty)$ -subquadratic Hamiltonians. In the second subsection, we shall look into the special case when  $H$  is  $(0, b_\infty)$ -subquadratic, and we shall try to derive additional information.

**The General Case: Nontriviality.** We assume that  $H$  is  $(A_\infty, B_\infty)$ -subquadratic at infinity, for some constant symmetric matrices  $A_\infty$  and  $B_\infty$ , with  $B_\infty - A_\infty$  positive definite. Set:

$$\gamma := \text{smallest eigenvalue of } B_\infty - A_\infty \quad (1)$$

$$\lambda := \text{largest negative eigenvalue of } \frac{d}{dt} A_\infty \quad (2)$$

2

**Fig. 1.** This is the caption of the figure displaying a white eagle and a white horse on a snow field

Theorem 1 tells us that if  $\lambda + \gamma < 0$ , the boundary-value problem:

$$\begin{aligned} \dot{x} &= JH'(x) \\ x(0) &= x(T) \end{aligned} \quad (3)$$

has at least one solution  $\bar{x}$ , which is found by minimizing the dual action functional:

$$\psi(u) = \int_0^T \left[ \frac{1}{2} (A_\infty^{-1}u, u) + N^*(-u) \right] dt \quad (4)$$

on the range of  $A$ , which is a subspace  $R(A)^\perp$  with finite codimension. Here

$$N(x) := H(x) - \frac{1}{2} (A_\infty x, x) \quad (5)$$

is a convex function, and

$$N(x) \leq \frac{\delta}{2} (B_\infty - A_\infty)x, x + c \quad \forall x \quad (6)$$

**Proposition 1.** Assume  $H'(0) = 0$  and  $H(0) = 0$ . Set:

$$\delta := \liminf_{x \rightarrow 0} 2N(x) \|x\|^{-2} \quad (7)$$

If  $\gamma < -\lambda < \delta$ , the solution  $\bar{x}$  is non-zero:

$$\bar{x}(t) \neq 0 \quad \forall t \quad (8)$$

*Proof.* Condition (7) means that, for every  $\delta' > \delta$ , there is some  $\varepsilon > 0$  such that

$$\|x\| \leq \varepsilon \Rightarrow N(x) \leq \frac{\delta'}{2} \|x\|^2 \quad (9)$$

It is an exercise in convex analysis, into which we shall not go, to show that this implies that there is an  $\eta > 0$  such that

$$f \|x\| \leq \eta \Rightarrow N'(x) \leq \frac{1}{2\delta'} \|x\|^2 \quad (10)$$

3

Since  $u_1$  is a smooth function, we will have  $\|hu_1\|_\infty \leq \eta$  for  $h$  small enough, and inequality (10) will hold, yielding thereby:

$$\psi(hu_1) \leq \frac{k^2}{2} \frac{1}{\lambda} \|u_1\|^2 + \frac{k^2}{2} \frac{1}{\delta'} \|u_1\|^2 \quad (11)$$

If we choose  $\delta'$  close enough to  $\delta$ , the quantity  $(\frac{1}{\lambda} + \frac{1}{\delta'})$  will be negative, and we end up with

$$\psi(hu_1) < 0 \quad \text{for } h \neq 0 \text{ small} \quad (12)$$

On the other hand, we check directly that  $\psi(0) = 0$ . This shows that 0 cannot be a minimizer of  $\psi$ , not even a local one. So  $\bar{x} \neq 0$  and  $\bar{x} \neq A_\infty^{-1}(0) = 0$ .  $\square$

**Corollary 1.** Assume  $H$  is  $C^2$  and  $(a_\infty, b_\infty)$ -subquadratic at infinity. Let  $\xi_1, \dots, \xi_N$  be the equilibria, that is, the solutions of  $H'(\xi) = 0$ . Denote by  $\omega_i$  the smallest eigenvalue of  $H''(\xi_i)$ , and set:

$$\omega := \min \{\omega_1, \dots, \omega_N\} \quad (13)$$

$$\text{If: } \frac{T}{2\pi} b_\infty < -E \left[ -\frac{T}{2\pi} a_\infty \right] < \frac{T}{2\pi} \omega \quad (14)$$

then minimization of  $\psi$  yields a non-constant  $T$ -periodic solution  $\bar{x}$ .

We recall once more that by the integer part  $E[\alpha]$  of  $\alpha \in \mathbb{R}$ , we mean the  $\alpha \in \mathbb{Z}$  such that  $\alpha < \alpha + 1$ . For instance, if we take  $a_\infty = 0$ , Corollary 2 tells us that  $\bar{x}$  exists and is non-constant provided that:

$$\frac{T}{2\pi} b_\infty < 1 < \frac{T}{2\pi} \omega \quad (15)$$

$$\text{or } T \in \left( \frac{2\pi}{\omega}, \frac{2\pi}{b_\infty} \right) \quad (16)$$

*Proof.* The spectrum of  $A$  is  $\frac{2\pi}{T} \mathbb{Z} + a_\infty$ . The largest negative eigenvalue  $\lambda$  is given by  $\frac{2\pi}{T} k_2 + a_\infty$ , where

$$\frac{2\pi}{T} k_2 + a_\infty < 0 \leq \frac{2\pi}{T} (k_2 + 1) + a_\infty \quad (17)$$

Hence:

$$k_2 = E \left[ -\frac{T}{2\pi} a_\infty \right] \quad (18)$$

The condition  $\gamma < -\lambda < \delta$  now becomes:

$$b_\infty - a_\infty < -\frac{2\pi}{T} k_2 - a_\infty < \omega - a_\infty \quad (19)$$

which is precisely condition (14).  $\square$

Table 1. This is the example table taken out of *The TeXbook*, p.246

Year	World population
8000 B.C.	5,000,000
50 A.D.	200,000,000
1650 A.D.	500,000,000
1945 A.D.	2,300,000,000
1980 A.D.	4,400,000,000

**Lemma 1.** Assume that  $H$  is  $C^2$  on  $\mathbb{R}^{2n} \setminus \{0\}$  and that  $H''(x)$  is non-degenerate for any  $x \neq 0$ . Then any local minimizer  $\bar{x}$  of  $\psi$  has minimal period  $T$ .

*Proof.* We know that  $\bar{x}$ , or  $\bar{x} + \xi$  for some constant  $\xi \in \mathbb{R}^{2n}$ , is a  $T$ -periodic solution of the Hamiltonian system:

$$\dot{x} = JH'(x). \quad (20)$$

There is no loss of generality in taking  $\xi = 0$ . So  $\psi(x) \geq \psi(\bar{x})$  for all  $\bar{x}$  in some neighborhood of  $x$  in  $W^{1,2}(\mathbb{R}/T\mathbb{Z}; \mathbb{R}^{2n})$ .

But this index is precisely the index  $ir(\bar{x})$  of the  $T$ -periodic solution  $\bar{x}$  over the interval  $(0, T)$ , as defined in Sect. 2.6. So

$$ir(\bar{x}) = 0. \quad (21)$$

Now if  $\bar{x}$  has a lower period,  $T/k$  say, we would have, by Corollary 31:

$$ir(\bar{x}) = ik_{T/k}(\bar{x}) \geq k \nu_{T/k}(\bar{x}) + k - 1 \geq k - 1 \geq 1. \quad (22)$$

This would contradict (21), and thus cannot happen.  $\square$

*Notes and Comments.* The results in this section are a refined version of [1]; the minimality result of Proposition 14 was the first of its kind.

To understand the nontriviality conditions, such as the one in formula (40), one may think of a one-parameter family  $x_T, T \in (\mathbb{R}^{n-1}, 2\pi\mathbb{Z}^{n-1})$  of periodic solutions,  $x_T(0) = x_T(T)$ , with  $x_T$  going away to infinity when  $T \rightarrow 2\pi\omega^{-1}$ , which is the period of the linearized system at 0.

**Theorem 1 (Ghoussoub-Preiss).** Assume  $H(t, x)$  is  $(0, \epsilon)$ -subquadratic at infinity for all  $\epsilon > 0$ , and  $T$ -periodic in  $t$

$$H(t, \cdot) \text{ is convex } \forall t \quad (23)$$

$$H(\cdot, x) \text{ is } T\text{-periodic } \forall x \quad (24)$$

$$H(t, x) \geq n(\|x\|) \text{ with } n(s) \rightarrow +\infty \text{ as } s \rightarrow +\infty \quad (25)$$

$$\forall \epsilon > 0, \exists c : H(t, x) \leq \frac{\epsilon}{2} \|x\|^2 + c. \quad (26)$$

*Notes and Comments.* The first results on subharmonics were obtained by Rabinowitz in [5], who showed the existence of infinitely many subharmonics both in the subquadratic and superquadratic case, with suitable growth conditions on  $H'$ . Again the duality approach enabled Clarke and Ekeland in [2] to treat the same problem in the convex-subquadratic case, with growth conditions on  $H$  only.

Recently, Michalek and Tarantello (see [3] and [4]) have obtained lower bound on the number of subharmonics of period  $kT$ , based on symmetry considerations and on pinching estimates, as in Sect. 5.2 of this article.

Assume also that  $H$  is  $C^2$ , and  $H''(t, x)$  is positive definite everywhere. Then there is a sequence  $x_k, k \in \mathbb{N}$ , of  $kT$ -periodic solutions of the system

$$\dot{x} = JH'(t, x) \quad (27)$$

such that, for every  $k \in \mathbb{N}$ , there is some  $p_k \in \mathbb{N}$  with:

$$p \geq p_k \Rightarrow x_{pk} \neq x_k. \quad (28)$$

$\square$

*Example 1 (External forcing).* Consider the system:

$$\dot{x} = JH'(x) + f(t) \quad (29)$$

where the Hamiltonian  $H$  is  $(0, b_\infty)$ -subquadratic, and the forcing term is a distribution on the circle:

$$f = \frac{d}{dt} F + f_0 \text{ with } F \in L^2(\mathbb{R}/T\mathbb{Z}; \mathbb{R}^{2n}), \quad (30)$$

where  $f_0 := T^{-1} \int_0^T f(t) dt$ . For instance,

$$f(t) = \sum_{k \in \mathbb{N}} \delta_k \xi, \quad (31)$$

where  $\delta_k$  is the Dirac mass at  $t = k$  and  $\xi \in \mathbb{R}^{2n}$  is a constant, fits the prescription. This means that the system  $\dot{x} = JH'(x) + f$  is excited by a series of identical shocks at interval  $T$ .

**Definition 1.** Let  $A_\infty(t)$  and  $B_\infty(t)$  be symmetric operators in  $\mathbb{R}^{2n}$ , depending continuously on  $t \in [0, T]$ , such that  $A_\infty(t) \leq B_\infty(t)$  for all  $t$ .

A Borelian function  $H : [0, T] \times \mathbb{R}^{2n} \rightarrow \mathbb{R}$  is called  $(A_\infty, B_\infty)$ -subquadratic at infinity if there exists a function  $N(t, x)$  such that:

$$H(t, x) = \frac{1}{2} (A_\infty(t)x, x) + N(t, x) \quad (32)$$

$$\forall t, \quad N(t, x) \text{ is convex with respect to } x \quad (33)$$

$$N(t, x) \geq n(\|x\|) \text{ with } n(s) \rightarrow +\infty \text{ as } s \rightarrow +\infty \quad (34)$$

$$\exists c \in \mathbb{R} : H(t, x) \leq \frac{c}{2} (B_\infty(t)x, x) + c \quad \forall x. \quad (35)$$

If  $A_\infty(t) = a_\infty I$  and  $B_\infty(t) = b_\infty I$ , with  $a_\infty \leq b_\infty \in \mathbb{R}$ , we shall say that  $H$  is  $(a_\infty, b_\infty)$ -subquadratic at infinity. As an example, the function  $\|x\|^m$ , with  $1 \leq m < 2$ , is  $(0, \epsilon)$ -subquadratic at infinity for every  $\epsilon > 0$ . Similarly, the Hamiltonian

$$H(t, x) = \frac{1}{2} k \|x\|^2 + \|x\|^m \quad (36)$$

is  $(k, k + \epsilon)$ -subquadratic for every  $\epsilon > 0$ . Note that, if  $k < 0$ , it is not convex.

Much of the front matter is in the body of the document. The preface is an unnumbered chapter and the table of contents is in an encapsulated  $\text{T}_{\text{E}}\text{X}$  field. To resolve page references correctly, compile the document three times from outside the program.

This shell automatically adds blank pages where necessary to ensure that new chapters begin on odd-numbered pages. Blank pages carry no headers or page numbers and are not shown here.

**Preface**

This is the preface and it is created using a TeX field in a paragraph by itself containing `\chapter*{Preface}`. When the document is loaded, this appears in the edit window like a normal chapter, but it is actually an unnumbered chapter. The `markboth` TeX field at the beginning of this paragraph sets the correct page heading for the Preface portion of the document. The preface does not appear in the table of contents.

**A. The First Appendix** ..... 7

**1. Purpose of this Document**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**2. Sample Mathematics and Text**

**2.1 In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{2.1}$$

is displayed and automatically numbered as equation 2.1. Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of B<sup>1</sup>TEX parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.  
 A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**2.2 Mathematics in section heads  $\int_a^b \ln t dt$**

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

<sup>1</sup> B<sup>1</sup>TEX automatically selects the spacing depending on the surrounding line lengths.

### 2.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 2.3.1.** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $I_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, \quad z \in I_\varepsilon. \quad (2.2)$$

*Proof.* Change  $z$  for  $1/z$ . Then  $I_\varepsilon \rightarrow \overline{I}_\varepsilon = \{z \in \mathbb{C}_+ : \overline{\varepsilon} \in I_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (2.3)$$

Fix  $z \in \overline{I}_\varepsilon$  and let  $C_\varepsilon(z) = \{\lambda \in \mathbb{C}_+ : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (2.3) that

$$\frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} a_m \frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \quad (2.4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_\varepsilon(z)} o(|z|) = r^{-1} \max_{\lambda \in C_\varepsilon(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{I}_\varepsilon/2$ , and hence by the Cauchy theorem (2.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, \quad z \in \overline{I}_\varepsilon/2,$$

that implies (2.2) by substituting  $1/z$  back for  $z$ .

### 2.4 Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

- b) Another numbered list item under a list item.
  - i. Third level numbered list item under a list item.
    - A. Fourth and final level of numbered list items allowed.

- Bullet item 1.
  - Bullet item 2.
    - Second level bullet item.
      - Third level bullet item.
        - Fourth and final level bullet item.

Description List Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in. Bump Mythical beast of Australian Aboriginal legends.

### 2.7 About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

### 2.4.1 Subsection Heading

This text appears under a subsection heading.

**Subsubsection Heading.** This text appears under a subsubsection heading.

*Subsubsubsection Heading.* This text appears under a subsubsubsection heading.

*Subsubsubsubsection Heading.* This text appears under a subsubsubsubsection heading.

### 2.5 Tags

You can apply the logical markup tag *Emphasized*.

You can apply the visual markup tags **Bold**, *Italics*, Roman, *Sans Serif*, *Slanted*, **SMALL CAPS**, and **Typewriter**.

You can apply the special, mathematics only, tags **BLACKBOARD BOLD**, **CALIGRAPHIC**, and **fraktur**. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

You can apply the size tags *small*, *scriptsize*, *footnotesize*, *small*, *normalsize*, *large*, *Large*, **LARGE**, *huge* and **Huge**.

Following is a group of paragraphs marked as *Body Quote*. This environment is appropriate for a short quotation or a sequence of short quotations.

The buck stops here. *Harry Truman*  
Ask not what your country can do for you; ask what you can do for your country. *John F. Kennedy*  
I am not a crook. *Richard Nixon*  
It's no exaggeration to say the undecideds could go one way or another. *George Bush*

### 2.6 Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.
  - a) A numbered list item under a list item.
 

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.

## A. The First Appendix

The appendix fragment is used only once. Subsequent appendices can be created using the Chapter Section/Body Tag.

### Afterword

The back matter often includes one or more of an index, an afterword, acknowledgements, a bibliography, a colophon, or any other similar item. In the back matter, chapters do not produce a chapter number, but they are entered in the table of contents. If you are not using anything in the back matter, you can delete the back matter TEX field and everything that follows it.

## Preface

This is the preface and it is created using a TeX field in a paragraph by itself containing `\chapter*{Preface}`. When the document is loaded, this appears in the edit window like a normal chapter, but it is actually an unnumbered chapter. This style starts numbering in the document preface using lower case Roman characters. The TeX field at the beginning of the first paragraph in the next chapter changes number to arabic style and resets the page counter to one.

+ This is page 1  
Printer: Opaque this

## 1 Purpose of this Document

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

2 1. Purpose of this Document

## 2 Sample Mathematics and Text

### 2.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \quad (2.1)$$

is displayed and automatically numbered as equation 2.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_n \theta \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n+k} - a_n)^k \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_k T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

### 2.2 Mathematics in section heads $\int_a^b \ln t dt$

Mathematics can appear in section levels. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

### 2.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \quad (2.2)$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (2.3)$$

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (2.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^{n-2} d\lambda}{(\lambda - z)^2} + R(z), \quad (2.4)$$

where for the remainder  $R(z)$  we have

$$|R(z)| \leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) = \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|).$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (2.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \bar{\Gamma}_\varepsilon/2,$$

that implies (2.2) by substituting  $1/z$  back for  $z$ . ■

### 2.4 Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

#### 2.4.1 Subsection Heading

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

### 2.2 Mathematics in section heads $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

### 2.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, \quad z \in \Gamma_\varepsilon \quad (2.2)$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \leq \arg z \leq \pi + \varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (2.3)$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_\varepsilon(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (2.3) that

$$\frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} \frac{a_n}{2\pi i} \int_{C_\varepsilon(z)} \frac{(\lambda - z)^{n-2} d\lambda}{(\lambda - z)^2} + R(z), \quad (2.4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_\varepsilon(z)} o(|z|) = r^{-1} \max_{\lambda \in C_\varepsilon(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon$ , and hence by the Cauchy theorem (2.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, \quad z \in \overline{\Gamma}_\varepsilon/2,$$

that implies (2.2) by substituting  $1/z$  back for  $z$ . ■

The front matter for this shell is limited. Three front matter fields appear in the body of the document: the dedication, the preface, and the table of contents.

This shell inserts “Publisher’s pages” (see sample page i) before the body of the document. The shell also automatically adds blank pages where necessary to ensure that new chapters begin on odd-numbered pages. Blank pages carry headers and page numbers as shown on sample page viii. Other blank pages in the sample are not shown here. Note the crop marks.

April 28, 2003 16:10 WSPC/Book Trim Size for 9in x 6in Book-WorldScientificBook9in6

## Chapter 2

### Sample Mathematics and Text

**2.1 In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^n a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^n a_i \tag{2.1}$$

is displayed and automatically numbered as equation 2.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_n \rightarrow 0$  for each  $k$ , and  $\tau_n = \sum_{k=0}^{n-1} (a_{n,k+1} - a_{n,k}) \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{n-1} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

4 *Book Title*

### 2.2 Mathematics in section heads $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

### 2.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 2.1** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{2.2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{2.3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (2.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda)d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} \frac{1}{m!} \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^m f(\lambda)}{(\lambda - z)^2} + R(z), \tag{2.4}$$

where for the remainder  $R(z)$  we have

$$|R(z)| \leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) = \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|).$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (2.4) implies

Contents 5

$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1$ , as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon/2$ ,

that implies (2.2) by substituting  $1/z$  back for  $z$ . □

### 2.4 Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

#### 2.4.1 Subsection Heading

This text appears under a subsection heading.

### 2.5 Tags

You can apply the logical markup tag *Emphasized*.

You can apply the visual markup tags **Bold**, *Italics*, Roman, Sans Serif, **Small**, **SMALL CAPS**, and **Typewriter**.

You can apply the special, mathematics only, tags **BLACKBOARD BOLD**, *CALCYGR*, *APPHZC*, and *fraktur*. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

You can apply the size tags *small*, *x-small*, *footnotesize*, *small*, *normalsize*, *large*, **Large**, and **LARGE**.

Following is a group of paragraphs marked as Body Quote. This environment is appropriate for a short quotation or a sentence of short quotations.

### 2.6 Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

- (1) Numbered list item 1.
- (2) Numbered list item 2.
  - (a) A numbered list item under a list item.
 

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
  - (b) Another numbered list item under a list item.
    - i. Third level numbered list item under a list item.
      - A. Fourth and final level of numbered list items allowed.

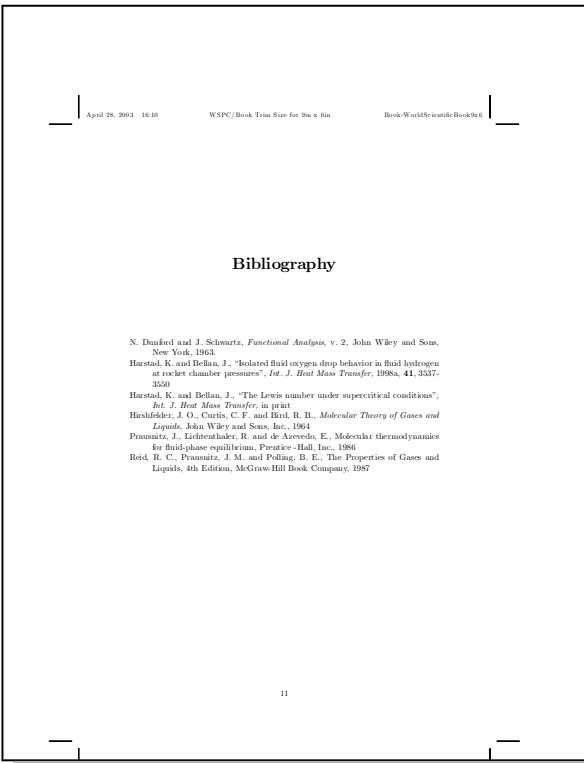

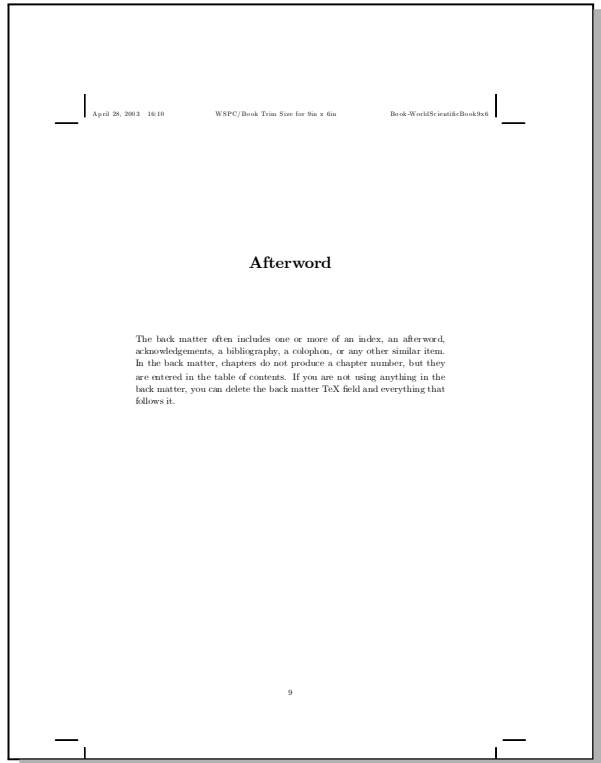

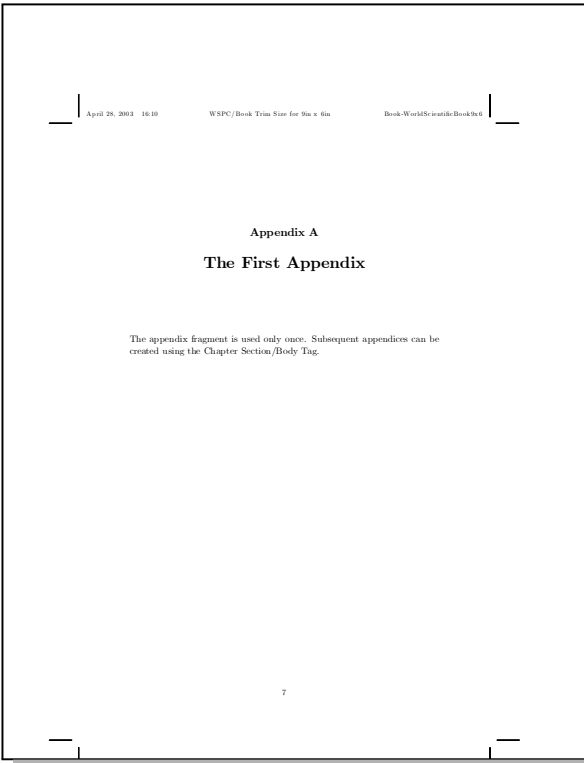

- Bullet item 1.
- Bullet item 2.
  - Second level bullet item.
  - \* Third level bullet item.
  - Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Doubleclick the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

### 2.7 About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2; 3; 4].

The front matter for this shell is limited. Three front matter fields appear in the body of the document: the dedication, the preface, and the table of contents.

This shell inserts “Publisher’s pages” (see sample page i) before the body of the document. The shell also automatically adds blank pages where necessary to ensure that new chapters begin on odd-numbered pages. Blank pages carry headers and page numbers as shown on sample page viii. Other blank pages in the sample are not shown here. Note the crop marks.

## Chapter 1

### Purpose of this Document

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

1

Chapter 2  
Sample Mathematics and Text

2.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^n a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^n a_i \tag{2.1}$$

is displayed and automatically numbered as equation 2.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{n-1} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{n-1} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [?].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

2.2 Mathematics in section heads  $\int_a^b f(x) dx$  in *tdt*

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line length.

3

Book Title

2.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 2.1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \in \Gamma_\varepsilon. \tag{2.2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_+ : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{2.3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_+ : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (2.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{2.4}$$

where for the remainder  $R(z)$  we have

$$|R(z)| \leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) = \frac{|z| + r}{r} O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} O(|z|).$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon$ , and hence by the Cauchy theorem (2.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon,$$

that implies (2.2) by substituting  $1/z$  back for  $z$ . □

2.4 Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

# 5 Exam and Syllabus Shells

Exam and syllabus shells are based on the typesetting specifications set in one of two base document classes—`article.cls` or `report.cls`. Exam shells usually have limited front and back matter, if any.

See page 2 for information about base document class defaults and see page 4 for page layout diagrams for the base document classes.

## Assignment

### Document class base file: article.cls

Options and Packages      Defaults

Document class options    Body text 12 pt

Packages:

amsmath                      Standard

The front matter is empty in this shell.

Math 191 Spring 1998  
Assignment 5: More Derivative Stuff

The due date for this assignment is Friday February 11.

Reading assignment: Sections 3.4, 3.5, 3.6, 3.5, 4.3.

1. Use the definition of derivative to compute the derivative of the following functions:

(a)  $f(z) = z^3 + 2z + 1$

(b)  $g(x) = 1/(3x^2)$

(c)  $\gamma(t) = \sqrt[3]{t}$

2. Use problem 1 from assignment 3 and the definition of derivative to show that  $(f+g)' = f' + g'$ .

3. Do the following exercises from the text:

- page 108 numbers 3 to 18 multiples of 3
- pages 115 and 116 numbers 9 to 36 multiples of 3
- pages 101 and 102 numbers 3 to 30 multiples of 3
- pages 120 and 121 numbers 9 to 36 multiples of 3
- page 144 numbers 3, 6, 8, 9.

4. Review the concept of inverse functions from Chapter 1.

(a) Suppose  $f$  and  $g$  are inverse functions and  $g'(x)$  is known. Use chain rule and the fact that  $f$  and  $g$  are inverse functions to find  $f'(x)$  in terms of  $g'$  and  $f$ .

(b) Suppose  $E(x)$  and  $L(x)$  are inverse functions and  $L'(x) = \frac{1}{x}$ . Use the above result to find  $E'(x)$ .

5. Simultaneous tangent lines. Sketch the graphs of  $f(x) = -(x^2+1)$  and  $g(x) = (x-1)^2$ . Find the equations of the lines that are tangent to both curves simultaneously.

**Construction of an Algebraic Closure**  
Math 581 Fall, 1998

In this note we give a construction of an algebraic closure of an arbitrary field. This construction is due to Emil Artin. Zorn's lemma is not invoked in this proof, unlike the one given in class. We do indirectly use Zorn's lemma since we require the existence of maximal ideals inside arbitrary commutative rings with identity, which does require Zorn's lemma. However, we avoid the use of cardinal arithmetic.

**Theorem 1** *Let  $F$  be a field. Then there exists an algebraic closure of  $F$ .*

**Proof.** Suppose we have constructed extension fields  $F \subseteq F_1 \subseteq F_2 \subseteq \dots$  such that for all  $n$ , (1)  $F_{n+1}$  is algebraic over  $F_n$ , and (2) every nonconstant  $f(x) \in F_n[x]$  has a root in  $F_{n+1}$ . Let  $K$  be the union of the  $F_n$  for all  $n$ . Since the  $\{F_n\}$  form an ascending chain of fields,  $K$  is a field extension of  $F$ . Also, since being algebraic is a transitive property, we see that every  $F_n$  is algebraic over  $F$ , so  $K$  is also algebraic over  $F$ . We claim that  $K$  is algebraically closed, which will then show  $K$  is an algebraic closure of  $F$ . To see this, take a nonconstant  $g(x) \in K[x]$ . Since there are only finitely many coefficients of  $g(x)$ , we see that  $g(x) \in F_n[x]$  for some  $n$ . Then  $g(x)$  has a root in  $F_{n+1} \subseteq K$ . This shows that  $K$  is algebraically closed.

We now inductively construct the fields  $F_n$ . Suppose that  $F \subseteq F_1 \subseteq \dots \subseteq F_n$  have been constructed. We then construct  $F_{n+1}$ . Consider the polynomial ring  $F_n[x]$  in the variables  $x_j$ , one variable for each monic irreducible polynomial  $f(x) \in F_n[x]$ . Let  $I$  be the ideal of  $F_n[x]$  generated by  $\{f(x_j)\}$  for each such  $f$ . Then  $I \neq F_n[x]$ , which is proved in the lemma below. Set  $R = F_n[x]/I$ , a nonzero ring. Let  $M$  be a maximal ideal of  $R$ , and finally set  $F_{n+1} = R/M$ . We have a sequence of ring homomorphisms

$$F_n \rightarrow F_n[x] \rightarrow F_n[x]/I = R \rightarrow R/M = F_{n+1}.$$

Since the map  $F_n \rightarrow F_{n+1}$  is not the zero map (as  $1 \mapsto 1$ ), this map is  $1 \rightarrow 1$ , so we may assume  $F_n \subseteq F_{n+1}$ . The ring  $F_{n+1} = R/M$  is a field since  $M$  is a maximal ideal of  $R$ . Furthermore, since the last two maps above are onto, if  $a_j$  is the image in  $F_{n+1}$  of  $x_j$  then  $F_{n+1} = F_n[a_j]$ . Now  $f(x_j) = 0$  in  $R$  since  $f(x_j) \in I$ . Thus  $f(a_j) = 0$  in  $F_{n+1}$ . But  $f(x_j) = f(x_j)$ , so  $f(a_j) = 0$ . This shows that each  $a_j$  is algebraic over  $F_n$ . Hence  $F_{n+1}$  is generated over  $F_n$  by the  $a_j$ .  $F_{n+1}$  is algebraic over  $F_n$ . Finally, if  $g(x) \in F_n[x]$  then let  $f(x)$  be a monic irreducible factor of  $g(x)$ . Then  $f(x)$  has a root in  $F_{n+1}$ , namely  $a_j$ . Thus  $g(x)$  has a root in  $F_{n+1}$ . This completes the proof of the properties of  $F_{n+1}$ . ■

The last step in the proof is to demonstrate that the ideal  $I$  defined above is nonzero. We do this in the following lemma.

**Lemma 2** *Let  $F$  be a field and  $F[x_i]$  the polynomial ring in the variables  $x_i$ , where  $i$  ranges over some set  $I$ . Suppose for each  $i$  that  $f_i(x)$  is a monic irreducible polynomial over  $F$ . Then the ideal  $I$  of  $F[x_i]$  generated by  $f_i(x_i)$  is a proper ideal.*

**Proof.** Suppose  $I = F[x_i]$ . Then there is an  $n$  and polynomials  $g_1, \dots, g_n$  such that

$$1 = f_1(x_{i_1})g_1(x_{i_1}, \dots, x_{i_n}) + \dots + f_n(x_{i_n})g_n(x_{i_1}, \dots, x_{i_n}).$$

For simplicity we shall write  $x_m$  in place of  $x_{i_m}$  for each  $m$ . We can assume that all the  $g_m$  involve only the variables  $x_1, \dots, x_n$  by increasing the number of  $f_m$  if necessary in an equation of this type. Suppose  $n$  is chosen to be minimal such that we have such an expression involving  $n$  of the  $x_i$ . If  $S = \{f_1(x_1), \dots, f_n(x_n)\}$  then  $\{f_i(x_i) : i \in S\} = S$ . Let  $R = F[x_1, \dots, x_n]$ . By minimality of  $n$  we have  $\{f_i(x_i) : i \in S\} \neq R$ . Let us view the above equation as taking place in  $S = R[S]$ . If  $c_m = f_m(x_m) \in R$  we have  $J = (c_1, \dots, c_{n-1}, f_n(x_n)) = S$ . Now set  $I_0 = (c_1, \dots, c_{n-1}) \subseteq R$ . So  $J = (I_0, f_n(x_n))$ . There are ring homomorphisms

$$R[x_n] \rightarrow (R/I_0)[x_n] \rightarrow \frac{(R/I_0)[x_n]}{(f_n(x_n))}$$

where  $\overline{f_n(x_n)}$  is the image of  $f_n(x_n)$  in  $(R/I_0)[x_n]$ . Since  $R/I_0$  is a nonzero ring and  $\overline{f_n(x_n)}$  is not a unit (as  $f_n$  is monic of degree at least 1) we see that this last ring is nonzero. Hence the kernel of the composite homomorphism is a proper ideal of  $S$ . But  $J$  lies in this kernel, so  $J \neq S$ . This contradiction shows our original  $I$  is a proper ideal of  $F[x_i]$ , proving the lemma. ■

**Math 191**  
**Calculus and Analytic Geometry I**  
SPRING 1998

**Instructor:** Dr. Patrick Morandi, WH 222, 646-2126 (Math dept: 646-3901), email: pmoran@u.wisc.edu.

**Time and Location:** T, Th 11:45 - 1:00, Science Hall 108.

**Office Hours:** Tuesday 10:30 - 11:30  
 Wednesday 12:00 - 1:30  
 Thursday 1:30 - 3:00.

**Textbook:** Calculus and Analytic Geometry, 4th ed., Sherman K. Stein.

**Material:** Chapters 1, 2, 3, 4, 5, and 6 up to 6.4.

This course is an introduction to differential and integral calculus. The origins of calculus began over 2000 years ago in the time of the Greeks, who were interested in (among other things) areas and tangents. However it was not until Newton developed the essentials of calculus in the mid seventeenth century that the problems of finding areas of general shapes and finding tangents to curves were seen to be related. While Newton (and independently Leibniz) developed calculus in only a few years, it was not until the mid nineteenth century that calculus was put on the solid foundation that we know today. Applications of calculus include virtually every area of science along with business and economics.

**Grading:** There will be weekly assignments, a midterm exam and a final. They will count toward the grade as follows.

Assignments	60%
Midterm	15%
Final	25%

**Exams:** The midterm exam will be on Thursday, February 27. The final exam is on Monday, May 4 from 3:30 to 5:30 p.m. This time is common to all 191 sections and is unchangeable.

In addition to these exams there will be a Differentiation Skills Exam (DSE) administered by the testing center. After you learn basic techniques of differentiation near the beginning of the semester, you will be ready to take the DSE. To pass the course you **MUST** pass this mastery exam by the deadline of April 6. If you have not passed the exam by this deadline, you will not pass the course, regardless of any of your other work. The DSE does not affect the grade you receive in the course, which will be determined by your other work. It is simply a basic calculational skills requirement for passing the course. The exam consists solely of routine differentiation calculations, and you must do perfect work on a calculation to receive credit for it. You must answer 9 out of 10 questions perfectly in order to pass the mastery exam. You may retake different versions of the exam a number of times if you need to in order to master these skills. Further information about the exam will be provided later.

You must also take the DSE at least once by the withdrawal date of March 6. Failure to do so will result in you being automatically dropped from the course. You are offered a special bonus for completing the exam in a timely fashion: up until March 6, only 8 questions need to be answered correctly to pass! After this date, up to the final deadline of April 6, passing the exam requires 9 questions perfectly correct.

**Description of the Course**

The course will be centered around several main topics covering the notion of function, continuity, derivatives with applications, the basics of integration and exponential and logarithmic functions with applications. Most every week a new assignment will be introduced on Thursday's class meeting. The assignment will include work for the following week usually consisting of a reading assignment and culminating in a written assignment to be handed in by Friday afternoon. The first assignment will be done individually and the other assignments will be done in groups of 3 or 4 students. Each group will turn in one write-up.

The purpose of written homework in this course is to develop skills in understanding and communicating mathematics. It is not to give you busy work or drill. Don't think of your homework paper as a certificate proving that you have done the assignment. Think of it as an exercise in learning and in reporting what you have learned. There is a lot of truth in the statement *if you can't explain it, you don't understand it*. Communicate with the reader. Don't write to the instructor (who already knows how to do the problems), but explain your solutions to someone who needs help, perhaps a classmate who has been sick. Start at the beginning and be clear, logical and complete. The ultimate test of what you write is this: can someone learn from your paper? Easily? Remember, the reader will see only what you write, not what you meant to say. So it must all be there, and be accurate. Make your paper reader friendly. We will talk some about this in class.

Class time will be divided between lecture, group work and group directed discussion. Since assignments will include reading assignments, the lecture will serve to elaborate on and clarify the readings. You will be expected to complete the reading assignment by the first class meeting of each week, where you often will either have to hand in a paragraph about the reading, write such a paragraph at the start of class or have a short quiz on the reading. During group directed discussion, you will be expected to report on your group's progress/difficulties and ask questions about the material on the assignment.

The purpose of working in groups is twofold. First, by sharing ideas you will be able to learn from each other, allowing you to clarify what you get out of the lecture and reading. Second is to get you accustomed to working with other people, a likely situation in your future job. The goal for an assignment is to get each group member to understand the entire assignment. Frequently a major part of an assignment will be to summarize the various components. In order to do this you will need to understand the entire assignment. Therefore you should not divide the problems among your group members, but have each person work on each part and discuss what you come up with.

## 6 Other Document Shells

With one exception, the shells in this category are based on the typesetting specifications set in one of three base document classes—`article.cls`, `book.cls`, or `report.cls`. The shells produce both short documents (faxes, letters, memos, press releases, resumes, and slides) and long (books and reports). Obviously, the structure and elements in these document shells differ widely. Many of the shells were designed for earlier versions of the program.

See page 2 for information about base document class defaults and see page 4 for page layout diagrams for the base document classes.

## Assorted - Basic Assignment

### Document class base file: article.cls

Options and Packages Defaults

Document class options Standard

Packages:

None

The front matter is blank. Title information appears in the body of the document.

Math 123, Section 4 Fall 2001  
Assignment #2: Due October 9

### 1 Mathematics in This Shell

The expression  $\sum_{i=1}^n a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^n a_i \tag{1}$$

is displayed and automatically numbered as equation ??.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{n-1} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{n-1} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ .

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays. The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

### 2 Features of This Shell

This is some introductory text.

### 3 Section Headings

Use the Section tag for major sections, and the Subsection tag for subsections.

#### 3.1 Subsection

This is some harmless text under a subsection.

##### 3.1.1 Subsubsection

This is some harmless text under a subsubsection.

**Subsubsubsection** This is some harmless text under a subsubsubsection.

**Subsubsubsubsection** This is some harmless text under a subsubsubsubsection.

### 4 Tags

You can apply the logical markup tag *Emphasized*.  
You can apply the visual markup tags **Bold**, *Italics*, Roman, Sans *Serif*, *Slanted*, SMALL CAPS, and *Typewriter*.  
You can apply the special, mathematics only, tags `\fraktur`, `\BLACKBOARD BOLD`, and `\CALLIGRAPHIC`.  
Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

1

You can apply the size tags *small*, *scriptsize*, *footnotesize*, *small*, *normalsize*, *large*, *Large*, *LARGE*, *huge* and *Huge*.

This is a Body Math paragraph. Each time you press the Enter key, Scientific WorkPlace switches to mathematics mode. This is convenient for carrying out "scratchpad" computations.

Following is a group of paragraphs marked as Body Quote. This environment is appropriate for a short quotation or a sequence of short quotations.

The buck stops here. *Harry Truman*

Ask not what your country can do for you; ask what you can do for your country. *John F Kennedy*

I am not a crook. *Richard Nixon*

It's no exaggeration to say the undecideds could go one way or another. *George Bush*

### 4.1 List Environments

You can create numbered, bulleted, and description lists using the tag popup at the bottom left of the screen.

1. List item 1
2. List item 2
  - (a) A list item under a list item.  
The typeset style for this level is different than the screen style. The screen shows a lower case alphabetic character followed by a period while the typeset style uses a lower case alphabetic character surrounded by parentheses.
  - (b) Just another list item under a list item.
    - i. Third level list item under a list item.
      - A. Fourth and final level of list items allowed.

- Bullet item 1
- Bullet item 2
  - Second level bullet item.
  - \* Third level bullet item.
  - Fourth (and final) level bullet item.

**Description List** Each description list item has a term followed by the description of that term. Double click the term box to enter the term, or to change it.

**Bunyip** Mythical beast of Australian Aboriginal legends.

## Assorted - Math Scratchpad

### Document class base file: article.cls

Options and Packages	Defaults
Document class options	Body text 12 pt
Packages:	
latexsym	None

When you open a new document with the Blank Document shell, the document window is empty. The shell sets the environment for mathematical computations by opening in Body Math. The shell defaults to Body Math whenever the insertion point is in Body Math and you begin a new paragraph. Thus, you can begin entering mathematics immediately without having to switch from text to mathematics first.

The mathematics scratchpad defaults to Body Math. Each time you press the Enter key in Body Math, you enter mathematics, so that you can perform computations without having to switch to mathematics first. In fact, you must switch to text before you can type a paragraph like this one.

$$f(x) = |\sin x|$$

$$\lim_{n \rightarrow \infty} \sin_n x = 0$$

$$\lim_{n \rightarrow \infty} \sum_{k=0}^n (a_{n,k+1} - a_{n,k})^x = 0$$

$$x^2 + y^2 = z^2$$

$$\sin^2 \theta + \cos^2 \theta = 1$$

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right)$$

$$\Gamma_\varepsilon = \{z \in \mathbb{C}; 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$$

1

## Book - SW Book #1

### Document class base file: book.cls

Options and Packages	Defaults
Document class options	Body text 12 pt
Packages:	
tcibkpk, sw20obk1	None

The preface is an unnumbered chapter in the body of the document. The shell automatically adds blank pages where necessary to ensure that new chapters begin on odd-numbered pages. Blank pages carry headers with page numbers, as shown on sample page 8. Other blank pages in the sample are not shown here.

## Preface

This is the preface and it is created using a TeX field in a paragraph by itself containing `\chapter*{Preface}`. When the document is loaded, this appears in the edit window like a normal chapter, but it is actually an unnumbered chapter. The `markboth` TeX field at the beginning of this paragraph sets the correct page heading for the Preface portion of the document. The preface does not appear in the table of contents.

---

## Chapter 1

---

### Purpose of this Document

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

---

## Chapter 2

---

### Sample Mathematics and Text

#### In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{2.1}$$

is displayed and automatically numbered as equation 2.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^+ \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>3</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

<sup>3</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

## Mathematics in section heads $\int_{\alpha}^{\beta} \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

## Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, \quad z \in \Gamma_\varepsilon. \quad (2.2)$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \overline{\varepsilon} \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (2.3)$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (2.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^n d\lambda}{(\lambda - z)^2} + R(z), \quad (2.4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

The buck stops here. *Harry Truman*

Ask not what your country can do for you; ask what you can do for your country. *John F Kennedy*

I am not a crook. *Richard Nixon*

It's no exaggeration to say the undecideds could go one way or another. *George Bush*

## Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
  2. Numbered list item 2.
    - (a) A numbered list item under a list item.
 

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
    - (b) Another numbered list item under a list item.
      - i. Third level numbered list item under a list item.
        - A. Fourth and final level of numbered list items allowed.
- Bullet item 1.
  - Bullet item 2.
    - Second level bullet item.
      - \* Third level bullet item.
        - . Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (2.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, \quad z \in \overline{\Gamma}_\varepsilon/2,$$

that implies (2.2) by substituting  $1/z$  back for  $z$ . ■

## Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

### Subsection Heading

This text appears under a subsection heading.

### Subsubsection Heading

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsubsection heading.

## Tags

You can apply the logical markup tag *Emphasized*.

You can apply the visual markup tags **Bold**, *Italics*, Roman, **Sans Serif**, *Slanted*, **SMALL CAPS**, and **Typewriter**.

You can apply the special, mathematics only, tags **BLACKBOARD BOLD**, *CALIGRAPHIC*, and *fraktur*. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

You can apply the size tags *sup*, *scriptsize*, *footnotesize*, *small*, *normal-size*, *large*, *Large*, **LARGE**, **huge** and **Huge**.

Following is a group of paragraphs marked as *Body Quote*. This environment is appropriate for a short quotation or a sequence of short quotations.

## About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

---

## Appendix A

---

### The First Appendix

The appendix fragment is used only once. Subsequent appendices can be created using the Chapter Section/Body Tag.

15

### Afterword

The back matter often includes one or more of an index, an afterword, acknowledgements, a bibliography, a colophon, or any other similar item. In the back matter, chapters do not produce a chapter number, but they are entered in the table of contents.

17

## Chapter 2

### Sample Mathematics and Text

**In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{2.1}$$

is displayed and automatically numbered as equation 2.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**Mathematics in section heads**

$$\int_{\alpha}^{\beta} \ln t dt$$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

Sample Mathematics and Text 9

### Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \quad (2.2)$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (2.3)$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (2.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \quad (2.4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) \\ &= r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) \\ &= \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon$ , and hence by the Cauchy theorem (2.4) implies

10

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1,$$

as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon/2$ .

that implies (2.2) by substituting  $1/z$  back for  $z$ . ■

### Section Headings

### About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example [2, 3, 4].

### Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.

2. Numbered list item 2.

(a) A numbered list item under a list item.

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.

Sample Mathematics and Text

11

## Appendix A

### The First Appendix

The appendix fragment is used only once. Subsequent appendices can be created using the Chapter Section/Body Tag.

The First Appendix

13

## Afterword

The back matter often includes one or more of an index, an afterword, acknowledgements, a bibliography, a colophon, or any other similar item. In the back matter, chapters do not produce a chapter number, but they are entered in the table of contents.

The First Appendix

## Book - SW Book #3

### Document class base file: book.cls

Options and Packages	Defaults
Document class options	Body text 12 pt
Packages:	
tcibkpk, sw20obk3	None

The preface is an unnumbered chapter in the body of the document. The shell automatically adds blank pages where necessary to ensure that new chapters begin on odd-numbered pages. Blank pages carry footers with page numbers, as shown on sample page 8. Other blank pages in the sample are not shown here.

---

PREFACE

This is the preface and it is created using a TeX field in a paragraph by itself containing \chapter\*{Preface}. When the document is loaded, this appears in the edit window like a normal chapter, but it is actually an unnumbered chapter. The `\markboth` TeX field at the beginning of this paragraph sets the correct page heading for the Preface portion of the document. The preface does not appear in the table of contents.

---

PREFACE 5

---

1 PURPOSE OF THIS DOCUMENT

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

2 SAMPLE MATHEMATICS AND TEXT

TEXT

In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{2.1}$$

is displayed and automatically numbered as equation 2.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^+ \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

---

SAMPLE MATHEMATICS AND TEXT 9

### Mathematics in section heads $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

### Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \quad (2.2)$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (2.3)$$

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (2.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^n d\lambda}{(\lambda - z)^2} + R(z), \quad (2.4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_\varepsilon$ , and hence by the Cauchy theorem (2.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \bar{\Gamma}_\varepsilon/2,$$

that implies (2.2) by substituting  $1/z$  back for  $z$ . ■

### Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

#### Subsection Heading

This text appears under a subsection heading.

#### Subsubsection Heading

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

### Tags

## Book - SW Book #4

### Document class base file: book.cls

Options and Packages	Defaults
Document class options	Body text 12 pt
Packages:	
tcibkpk, sw20obk4	None

The preface is an unnumbered chapter in the body of the document. The shell automatically adds blank pages where necessary to ensure that new chapters begin on odd-numbered pages. Blank pages carry footers with page numbers, as shown on sample page 8. Other blank pages in the sample are not shown here.

## PREFACE

This is the preface and it is created using a TeX field in a paragraph by itself containing `\chapter*{Preface}`. When the document is loaded, this appears in the edit window like a normal chapter, but it is actually an unnumbered chapter. The `markboth` TeX field at the beginning of this paragraph sets the correct page heading for the Preface portion of the document. The preface does not appear in the table of contents.

## 1. PURPOSE OF THIS DOCUMENT

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

## 2. SAMPLE MATHEMATICS AND TEXT

### 2.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \quad (2.1)$$

is displayed and automatically numbered as equation 2.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^+ \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

### 2.2 Mathematics in section heads $\int_{\alpha}^{\beta} \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

### 2.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, \quad z \in \Gamma_\varepsilon. \quad (2.2)$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (2.3)$$

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (2.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \quad (2.4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_\varepsilon$ , and hence by the Cauchy theorem (2.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, \quad z \in \bar{\Gamma}_\varepsilon,$$

that implies (2.2) by substituting  $1/z$  back for  $z$ . ■

### 2.4 Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

8

9

## Chapter 2 SAMPLE MATHEMATICS AND TEXT

### In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{2.1}$$

is displayed and automatically numbered as equation 2.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margin

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

### Mathematics in section heads $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

### Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{2.2}$$

---

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

10

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_z \rightarrow \overline{\Gamma}_z = \{z \in \mathbb{C}_- : \overline{z} \in \Gamma_z\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (2.3)$$

Fix  $z \in \overline{\Gamma}_z$ , and let  $C_\varepsilon(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (2.3) that

$$\frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \quad (2.4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_\varepsilon(z)} o(|z|) = r^{-1} \max_{\lambda \in C_\varepsilon(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_{\varepsilon/2}$ , and hence by the Cauchy theorem (2.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_{\varepsilon/2},$$

that implies (2.2) by substituting  $1/z$  back for  $z$ . ■

## Book - SW Book #6

### Document class base file: book.cls

Options and Packages	Defaults
Document class options	Body text 12 pt
Packages:	
tcibkpk, sw20obk6	None

The preface is an unnumbered chapter in the body of the document. The shell automatically adds blank pages where necessary to ensure that new chapters begin on odd-numbered pages. Blank pages page numbers at the bottom of the page, as shown on sample page 8. Other blank pages in the sample are not shown here.

PREFACE

This is the preface and it is created using a TeX field in a paragraph by itself containing `\chapter*{Preface}`. When the document is loaded, this appears in the edit window like a normal chapter, but it is actually an unnumbered chapter. The `markboth` TeX field at the beginning of this paragraph sets the correct page heading for the Preface portion of the document. The preface does not appear in the table of contents.

Chapter 1 PURPOSE OF THIS DOCUMENT

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

Chapter 2 SAMPLE MATHEMATICS AND TEXT

In-line and Displayed Mathematics Theorems, Lemmata, and Other Theorem-like Environments

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{2.1}$$

is displayed and automatically numbered as equation 2.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

Mathematics in section heads

$$\int_{\alpha}^{\beta} \ln t dt$$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing dependent on the surrounding line lengths.

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim z^2 f'(z), z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{2.2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{2.3}$$

Fix  $z \in \bar{\Gamma}_\varepsilon$  and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (2.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{2.4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) \\ &= r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) \\ &= \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (2.4) implies

$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1,$   
as  $z \rightarrow \infty, z \in \overline{\Gamma}_{1/2},$

that implies (2.2) by substituting  $1/z$  back for  $z$ . ■

**Section Headings**

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

**Subsection Heading**

This text appears under a subsection heading.

**Subsubsection Heading**

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

**Tags**

You can apply the logical markup tag *Emphasized*.

You can apply the visual markup tags **Bold**, *Italics*, Roman, **Sans Serif**, *Slanted*, **SMALL CAPS**, and **Typewriter**.

You can apply the special, mathematics only, tags **BLACKBOARD BOLD**, *CALIGRAPHIC*, and *fraktur*. Note that blackboard bold and calligraphic are correct only for uppercase letters A through Z.

You can apply the size tags *footnotesize*, *small*, *normalsize*, *large*, **Large**, **LARGE**, *huge* and **Huge**.

Following is a group of paragraphs marked as **Body Quote**. This environment is appropriate for a short quotation or a sequence of short quotations.

The back stops here. *Harry Truman*

Ask not what your country can do for you; ask what you can do for your country. *John F. Kennedy*

I am not a crook. *Richard Nixon*

It's no exaggeration to say the undecideds could go one way or another. *George Bush*

**Lists**

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.
  - (a) A numbered list item under a list item.

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.

- (b) Another numbered list item under a list item.
  - i. Third level numbered list item under a list item.
    - A. Fourth and final level numbered list item.

- Bullet item 1.
- Bullet item 2.
  - Second level bullet item.
    - Third level bullet item.
      - Fourth and final level bullet item.

10

**Description List** Each description list item has a lead-in followed by the item. Don't click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

**About the Bibliography**

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

11

**Appendix A THE FIRST APPENDIX**

The appendix fragment is used only once. Subsequent appendices can be created using the Chapter Section/Body Tag.

12

**AFTERWORD**

The back matter often includes one or more of an index, an afterword, acknowledgements, a bibliography, a colophon, or any other similar item. In the back matter, chapters do not produce a chapter number, but they are entered in the table of contents.

Chicago, IL 60613  
Subject: Scientific WorkPlace

Dear Sarah,

Here is the information you requested about our products. Scientific WorkPlace and Scientific Word make writing and doing mathematics easier than you ever imagined possible. The Gold Standard for mathematical publishing since 1992, these scientific word processors increase your productivity because they are easy to learn and use. You can compose and edit your documents directly on the screen, without being forced to think in a programming language. A simple click of a button allows you to typeset your documents in LaTeX. This lets you concentrate on writing a correct paper, while our software ensures it is a beautiful one. Scientific WorkPlace and Scientific Word enable both professional and support staff to produce stunning results quickly and easily, without having to know TeX or LaTeX.

*Getting Started with Scientific WorkPlace, Scientific Word, and Scientific Notebook* describes how to install and activate these three products, and how to get started creating your own documents. The chapters cover installation; creating, revising, saving, and printing a simple document. Additional chapters cover how to enter text and mathematics, format using tags, preview and print, using hyperlinks, and customize the program. Additionally, the manual describes how to compute and plot with the integrated computer algebra system in Scientific WorkPlace and Scientific Notebook. Final chapters address how to typeset your documents and how to take advantage of automatic numbering, indexing, and cross-referencing in Scientific WorkPlace and Scientific Word, and how to get help when you need it.

*Creating Documents with Scientific WorkPlace and Scientific Word* is organized by tasks, giving step-by-step instructions for completing both simple and more advanced user tasks. It begins with the basic word processing tasks required for nearly every document: opening, saving, and closing documents; entering and editing text and mathematics; previewing and printing when you typeset a document and when you don't; and formatting documents. The second half explains more advanced tasks, including using graphics and tables, structuring documents for LaTeX typesetting and for online use, managing documents with the

Page: 2

Document Manager, and customizing your installation. A full index simplifies finding the information you need.

*Doing Mathematics with Scientific WorkPlace and Scientific Notebook* describes how to use the built-in computer algebra system to do a wide range of mathematics without dealing directly with the syntax of the computer algebra system. This book is organized around the undergraduate mathematics curriculum for ease of use by beginners through professionals. Chapters 1-5 give you basic procedures for using the system, illustrated with material from the standard precalculus courses. Chapter 6 provides examples and instructions for creating graphs of curves and surfaces. Chapters 7-12 provide procedures for using the system for problems in analytic geometry and calculus, linear algebra, vector analysis, differential equations, statistics, and applied modern algebra. The manual includes exercises and sample solutions to help you practice the ideas presented and to suggest possibilities to explore beyond those covered in the manual.

Best regards,

Barry MacKichan  
President

A.1 About the Bibliography 7

1. SAMPLE MATHEMATICS AND TEXT

1.1. In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1.1}$$

is displayed and automatically numbered as equation 1.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

$$\sin^2 \theta + \cos^2 \theta = 1$$

A long line above may depend on your margins

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

1.2. Mathematics in Section Heads  $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

1.3. Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1.** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon < \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{1.2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{1.3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (1.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^1 a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^n d\lambda}{(\lambda - z)^2} + R(z), \tag{1.4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (1.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon/2,$$

that implies (1.2) by substituting  $1/z$  back for  $z$ . ■

2. FEATURES OF THIS SHELL

2.1. Section

Use the Section tag for major sections, and the Subsection tag for subsections.

2.1.1. Subsection

This is some harmless text under a subsection.

Subsubsection

This is some harmless text under a subsubsection.

Subsubsubsection This is some harmless text under a subsubsubsection.

Subsubsubsubsection This is some harmless text under a subsubsubsubsection.

2.2. Tags

You can apply the logical markup tag *Emphasized*.

You can apply the visual markup tags **Bold**, *Italics*, Roman, Sans Serif, *Slanted*, SMALL CAPS, and **Typewriter**.

You can apply the special, mathematics only, tags **BLACKBOARD BOLD**, *CALIGRAPHIC*, and *fraktur*. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

You can apply the size tags *small*, *scriptsize*, *footnotesize*, *small*, *normalsize*, *large*, *Large*, *LARGE*, *huge* and *Huge*.

This is a Body Math paragraph. Each time you press the Enter key, Scientific WorkPlace switches to mathematics mode. This is convenient for carrying out "scratchpad" computations.

Following is a group of paragraphs marked as Body Quote. This environment is appropriate for a short quotation or a sequence of short quotations.

The luck stops here. *Harry Truman*  
 Ask not what your country can do for you; ask what you can do for your country. *John F Kennedy*  
 I am not a crook. *Richard Nixon*  
 It's no exaggeration to say the undecideds could go one way or another. *George Bush*

### 2.3. List Environments

You can create numbered, bulleted, and description lists using the tag popup at the bottom left of the screen.

1. List item 1
  2. List item 2
    1. A list item under a list item.  
 The typeset style for this level is different than the screen style. The screen shows a lower case alphabetic character followed by a period while the typeset style uses a lower case alphabetic character surrounded by parentheses.
    2. Just another list item under a list item.
      1. Third level list item under a list item.
      1. Fourth and final level of list items allowed.
- Bullet item 1
  - Bullet item 2
    - Second level bullet item.

- \* Third level bullet item.
- Fourth (and final) level bullet item.

**Description List** Each description list item has a term followed by the description of that term. Double click the term box to enter the term, or to change it.

**Bunyip** Mythical beast of Australian Aboriginal legends.

## A. THE FIRST APPENDIX

The appendix fragment is used only once. Subsequent appendices can be created using the Chapter Section/Body Tag.

### A.1. About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

## Report - SW Report #1

### Document class base file: report.cls

Options and Packages	Defaults
Document class options	Body text 12 pt
Packages:	
tcibkpk	None
sw20orp1	None

The shell produces reports, using a 12-pt font. The abstract appears on a separate page from the title information, and both are single-column pages. The remainder of the report is produced in two columns. The shell includes a tag for report parts in addition to other section headings. Chapter headings are centered across the whole page, but other headings appear at the left side of the column. Page numbers appear at the bottom right. The shell supports theorem environments.

## Chapter 1 Sample Mathematics and Text

### 1.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \quad (1.1)$$

is displayed and automatically numbered as equation 1.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and

$$\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^+ \rightarrow 0.$$

Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

$\text{\TeX}$  parameters govern mathematical displays. The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below:

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

### 1.2 Mathematics in Headings

$\int_0^3 \ln t dt$   
 Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

### 1.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone

$$\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$$

then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \quad (1.2)$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (1.3)$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (1.3) that

$$\begin{aligned} & \frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} \\ &= \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \end{aligned} \quad (1.4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) \\ &= r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (1.4) implies

$$\begin{aligned} & \frac{d}{dz} f(1/z) \\ &= a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon/2, \end{aligned}$$

that implies (1.2) by substituting  $1/z$  back for  $z$ . ■

### 1.4 Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

#### 1.4.1 Subsection Heading

This text appears under a subsection heading.

##### 1.4.1.1 Subsubsection Heading

This text appears under a subsubsection heading.

##### 1.4.1.1.1 Subsubsubsection Heading

This text appears under a subsubsubsection heading.

### 1.5 Tags

You can apply the logical markup tag *Emphasis*.

You can apply the visual markup tags **Bold**, *Italics*, Roman, **Sans Serif**, *Slanted*, **SMALL CAPS**, and **Typewriter**.

You can apply the special, mathematics only, tags **fraction**, **BLACKBOARD BOLD**, and *CALIGRAPHIC*. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

You can apply the size tags *small*, *scriptsize*, *footnotesize*, *small*, *normalsize*, *large*, **LARGE**, **huge** and **Huge**.

Following are paragraphs marked as **Body Quote**. This environment is appropriate for

a short quotation or a sequence of short quotations.

The luck stops here. *Harry Truman*

Ask not what your country can do for you; ask what you can do for your country. *John F Kennedy*

I am not a crook. *Richard Nixon*

It's no exaggeration to say the undecideds could go one way or another. *George Bush*

### 1.6 Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.

(a) A numbered list item under a list item.

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.

(b) Another numbered list item under a list item.

i. Third level numbered list item under a list item.

A. Fourth and final level.

• Bullet item 1.

– Second level bullet item.

\* Third level bullet item.

. Fourth and final level.

**Description List** Each description list item has a lead-in followed by the item. Double click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

## Appendix A The First Appendix

The appendix fragment is used only once. Subsequent appendices can be created using the Chapter Section/Body Tag.

### A.1 About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

## Bibliography

- [1] N. Dunford and J. Schwartz, *Functional Analysis*, v. 2, John Wiley and Sons, New York, 1963.

## Report - SW Report #2

### Document class base file: report.cls

Options and Packages	Defaults
Document class options	Body text 12 pt
Packages:	
tcibkpk	None
sw20orp2	None

The shell produces single-column reports in a 12-pt font. The abstract appears on a separate page from the title information. The shell includes a tag for report parts in addition to other section headings. Chapter headings use a sans serif font. Margins are narrow. Page numbers appear at the bottom right. The shell supports theorem environments.

## Chapter 1 Sample Mathematics and Text

### 1.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1.1}$$

is displayed and automatically numbered as equation 1.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $z$  in  $C$ ,  $A_n z = \sum_{k=0}^{\infty} a_{n,k} T^k z$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

### 1.2 Mathematics in Section Heads

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

### 1.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{1.2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \bar{z} \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{1.3}$$

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_\varepsilon(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (1.3) that

$$\frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{1.4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_\varepsilon(z)} o(|z|) = r^{-1} \max_{\lambda \in C_\varepsilon(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_{\varepsilon/2}$ , and hence by the Cauchy theorem (1.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, z \in \bar{\Gamma}_{\varepsilon/2}.$$

that implies (1.2) by substituting  $1/z$  back for  $z$ . ■

## Appendix A The First Appendix

The appendix fragment is used only once. Subsequent appendices can be created using the Chapter Section/Body Tag.

### A.1 About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

### Document class base file: report.cls

Options and Packages	Defaults
Document class options	Body text 12 pt
Packages:	
tcibkpk	None
sw20orp3	None

The shell produces single-column reports offset to the right of the page. The abstract appears on a separate page from the title information. The shell includes a tag for report parts in addition to other section headings. Sections are separated by rules, and top and bottom margins are narrow. Page numbers appear at the bottom right, under a rule. The shell supports theorem environments.

Chapter 1 Sample Mathematics and Text

1.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1.1}$$

is displayed and automatically numbered as equation 1.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

1.2 Mathematics in Section

Heads  $\int_a^b \ln t dt$

Mathematics can appear in section leads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

1.3 Theorems, Lemmata, and Other

Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, \quad z \in \Gamma_\varepsilon. \tag{1.2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \overline{\Gamma}_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{1.3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (1.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{1.4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (1.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, \quad z \in \overline{\Gamma}_\varepsilon/2,$$

that implies (1.2) by substituting  $1/z$  back for  $z$ . ■

Appendix A The First Appendix

The appendix fragment is used only once. Subsequent appendices can be created using the Chapter Section/Body Tag.

A.1 About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

## Report - SW Report #4

### Document class base file: report.cls

Options and Packages	Defaults
Document class options	Body text 12 pt
Packages:	
tcibkpk	None
sw20orp4	None

The shell produces single-column reports in a 12-pt font. The abstract appears on a separate page from the title information. The shell includes a tag for report parts in addition to other section headings. Chapter headings are italicized. Sections are separated by rules, and top and bottom margins are narrow. Page numbers appear at the bottom right. The shell supports theorem environments.

## Chapter 1 Sample Mathematics and Text

### 1.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1.1}$$

is displayed and automatically numbered as equation 1.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

### 1.2 Mathematics in Section Heads $\int_C^{\beta} \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

### 1.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{1.2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : |\lambda - z| = r\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{1.3}$$

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (1.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{1.4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (1.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, z \in \bar{\Gamma}_\varepsilon/2,$$

that implies (1.2) by substituting  $1/z$  back for  $z$ . ■

## Appendix A The First Appendix

## Chapter 1 Sample Mathematics and Text

### 1.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1.1}$$

is displayed and automatically numbered as equation 1.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

### 1.2 Mathematics in Section Heads $\int_{\alpha}^{\beta} \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

### 1.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{1.2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi - \varepsilon \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{1.3}$$

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (1.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{1.4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (1.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, z \in \bar{\Gamma}_\varepsilon/2,$$

that implies (1.2) by substituting  $1/z$  back for  $z$ . ■

Packages:	
sw20vrep	None
refman	None

The shell produces single-column reports appropriate for Technische Universität Wien. The abstract appears on a separate page from the title information. The shell includes a tag for report parts in addition to other section headings. Chapter headings are separated from text by rules above and below. Other section headings are left-justified. Text is indented. The shell supports theorem environments.

**Part I**  
**The First Part**

---

**1. Sample Mathematics and Text**

---

**1.1 In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1.1}$$

is displayed and automatically numbered as equation 1.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2 Mathematics in Section Heads**  $\int_0^{\beta} \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

**1.3 Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{1.2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \overline{\Gamma}_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{1.3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (1.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{1.4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (1.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon/2,$$

that implies (1.2) by substituting  $1/z$  back for  $z$ . ■

**2. Features of this Shell**

---

**2.1 Section Headings**

Use the Section tag for major sections, and the Subsection tag for subsections.

**2.1.1 Subsection**

This is some harmless text under a subsection.

Subsubsection

This is some harmless text under a subsubsection.

**Subsubsubsection** This is some harmless text under a subsubsubsection.

**Subsubsubsubsection** This is some harmless text under a subsubsubsubsection.

**2.2 Tags**

You can apply the logical markup tag *Emphasized*.

You can apply the visual markup tags **Bold**, *Italics*, Roman, *Sans Serif*, *Slanted*, SMALL CAPS, and **Typewriter**.

You can apply the special, mathematics only, tags **BLACKBOARD BOLD**, *CALLIGRAPHIC*, and *fraktur*. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

You can apply the size tags small, *scriptsize*, footnotesize, small, *normalsize*, large, Large, LARGE, huge and Huge.

This is a Body Math paragraph. Each time you press the Enter key, Scientific WorkPlace switches to mathematics mode. This is convenient for carrying out "scratchpad" computations.

Following is a group of paragraphs marked as Body Quote. This environment is appropriate for a short quotation or a sequence of short quotations.

The buck stops here. *Harry Truman*

Ask not what your country can do for you; ask what you can do for your country. *John F Kennedy*

I am not a crook. *Richard Nixon*

It's no exaggeration to say the undecimals could go one way or another. *George Bush*

**2.3 List Environments**

You can create numbered, bulleted, and description lists using the tag popup at the bottom left of the screen.

1. List item 1
2. List item 2
  - (a) A list item under a list item.
 

The typeset style for this level is different than the screen style. The screen shows a lower case alphabetic character followed by a period while the typeset style uses a lower case alphabetic character surrounded by parentheses.
  - (b) Just another list item under a list item.
    - i. Third level list item under a list item.
      - A. Fourth and final level of list items allowed.

- Bullet item 1
- Bullet item 2
  - Second level bullet item.

5

- \* Third level bullet item.
  - . Fourth (and final) level bullet item.

Description List: Each description list item has a term followed by the description of that term. Double click the term box to enter the term, or to change it.

Bunyip: Mythical beast of Australian Aboriginal legends.

6

The shell produces single-column reports appropriate for Technische Universität Wien. The front matter doesn't include an abstract. The shell includes a tag for report parts in addition to other section headings. The titles of parts appear on a page by themselves, with rules above and below. Chapter headings are separated from text by rules above and below. Other section headings are left-justified. Text is indented. The shell supports theorem environments.

The Title of a TU Wien Report (new)

Dr. Samuel Author

The Date

---

I. The First Part

---

1 Sample Mathematics and Text

1.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^n a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^n a_i \tag{1.1}$$

is displayed and automatically numbered as equation 1.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{n-1} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{n-1} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above: 
$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

1.2 Mathematics in Section Heads  $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

1.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right).$$

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{1.2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \overline{\Gamma}_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{1.3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (1.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^1 a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^n d\lambda}{(\lambda - z)^2} + R(z), \tag{1.4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|\lambda|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (1.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon/2,$$

that implies (1.2) by substituting  $1/z$  back for  $z$ . ■

2 Features of this Shell

Supported by NSF Grant #12345-6789

## 2 MacKichan Software

MacKichan mathematics software products are based on an easy-to-use but powerful mathematical word processor. All provide reading, browsing, and printing of `.tex` files.

### 2.1 Enhanced Mathematics

MacKichan software products enhance the production of beautiful typeset mathematics.

#### 2.1.1 Products Suited to Your Needs

Choose the product features that meet your needs:

1. Typesetting
2. Computing
3. Internet access

### 3 Mathematics in This Shell

$$\sum_{n=1}^{\infty} \frac{1}{n^2} = 2$$

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^+ \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ .

# 7 Standard L<sup>A</sup>T<sub>E</sub>X Shells

The standard L<sup>A</sup>T<sub>E</sub>X shells provide the most general and portable set of document features. You can achieve almost any typesetting effect by beginning with a standard shell and adding L<sup>A</sup>T<sub>E</sub>X packages as necessary. We strongly recommend that you begin all new documents using one of the standard L<sup>A</sup>T<sub>E</sub>X shells, unless you have a compelling reason (such as publisher's instructions) to do otherwise.

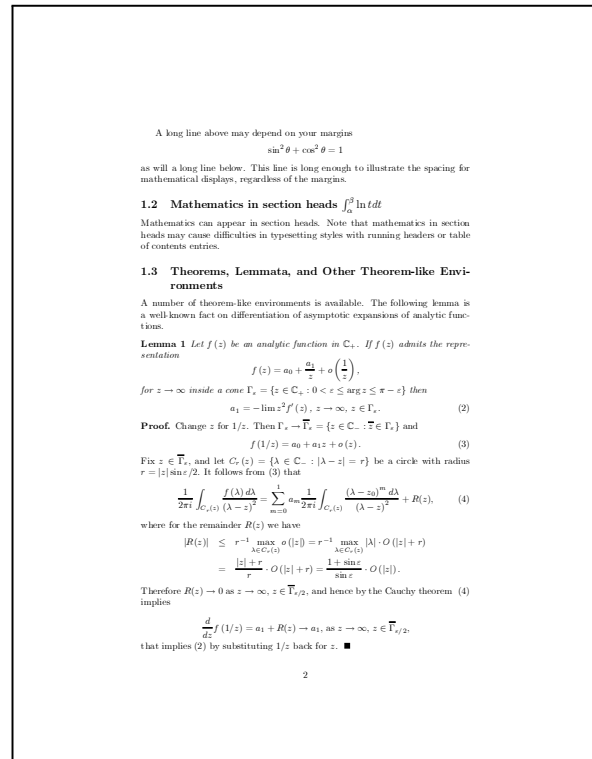

With one exception, the standard shells are based on the typesetting specifications set in one of three L<sup>A</sup>T<sub>E</sub>X base document classes—`article.cls`, `book.cls`, or `report.cls`. See page 2 for information about base document class defaults and for page layout diagrams for the base document classes.

## Standard L<sup>A</sup>T<sub>E</sub>X Article and Blank Standard L<sup>A</sup>T<sub>E</sub>X Article Shells

### Document class base file: article.cls

Options and Packages	Defaults
Document class options	Standard
Packages:	
amsmath	Standard

These two shells produce identical documents. The Standard L<sup>A</sup>T<sub>E</sub>X Article shell contains information about the shell that you can replace with the contents of your own document. The Blank Standard L<sup>A</sup>T<sub>E</sub>X Article shell contains no information or instructions. Both shells produce documents with centered title information, left-justified headings, theorem environments, and appendices.

## 2 Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

### 2.1 Subsection Heading

This text appears under a subsection heading.

#### 2.1.1 Subsubsection Heading

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

## 3 Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.
  - (a) A numbered list item under a list item.  
The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
  - (b) Another numbered list item under a list item.
    - i. Third level numbered list item under a list item.
      - A. Fourth and final level of numbered list items allowed.
- Bullet item 1.
- Bullet item 2.
  - Second level bullet item.
    - \* Third level bullet item.
      - Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

## 4 About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

### A An Appendix

Because appendices may contain material that is supplementary rather than integral to the main text, many styles use a different numbering system for equations that appear in the appendices.

$$\frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \quad (5)$$

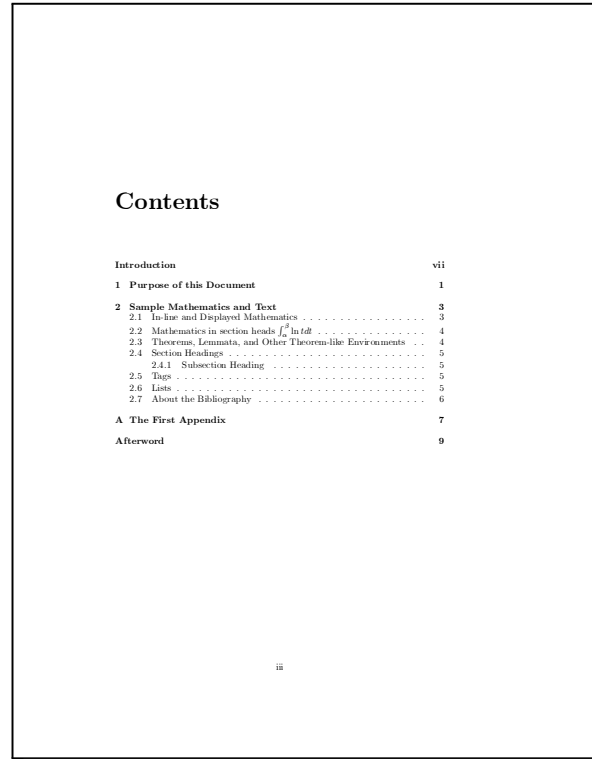

The quadratic equation shown as equation 5 is used to demonstrate how equations are numbered in the appendix.

## Standard L<sup>A</sup>T<sub>E</sub>X Book

### Document class base file: book.cls

Options and Packages	Defaults
Document class options	Standard
Packages:	
amsmath	Standard

The shell automatically adds blank pages after the title page, the table of contents, the preface, and where necessary to ensure that new chapters begin on odd-numbered pages. The shell doesn't contain an abstract. Blank pages carry headers and page numbers. Blank pages in the sample document are not shown here.

## Preface

This is the preface and it is created using a TeX field in a paragraph by itself containing `\chapter*{Preface}`. When the document is loaded, this appears in the edit window like a normal chapter, but it is actually an unnumbered chapter. The `markboth` TeX field at the beginning of this paragraph sets the correct page heading for the Preface portion of the document. The preface does not appear in the table of contents.

v

## Introduction

The introduction is entered using the usual chapter tag. Since the introduction chapter appears before the `\mainmatter` TeX field, it is an unnumbered chapter. The primary difference between the preface and the introduction in this shell document is that the introduction will appear in the table of contents and the page headings for the introduction are automatically handled without the need for the `markboth` TeX field. You may use either or both methods to create chapters at the beginning of your document. You may also delete these preliminary chapters.

vii

## Chapter 1

### Purpose of this Document

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

1

## Chapter 2

### Sample Mathematics and Text

#### 2.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^n a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^n a_i \tag{2.1}$$

is displayed and automatically numbered as equation 2.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $T_n = \sum_{k=0}^{\infty} (a_{k+1} - a_k) T^k = 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^n a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

3

## 2.2 Mathematics in section heads $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running leaders or table of contents entries.

## 2.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiations of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, \quad z \in \Gamma_\varepsilon. \quad (2.2)$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \overline{\Gamma}_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (2.3)$$

Fix  $z \in \overline{\Gamma}_\varepsilon$  and let  $C_\varepsilon(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (2.3) that

$$\frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} a_m \frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{(\lambda - z)^{m-2} d\lambda}{(\lambda - z)^2} + R(z), \quad (2.4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_\varepsilon(z)} o(|z|) = r^{-1} \max_{\lambda \in C_\varepsilon(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (2.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, \quad z \in \overline{\Gamma}_\varepsilon/2,$$

that implies (2.2) by substituting  $1/z$  back for  $z$ . ■

## 2.4 Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

### 2.4.1 Subsection Heading

This text appears under a subsection heading.

#### Subsubsection Heading

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**Subsubsubsubsection Heading** This text appears under a subsubsubsubsection heading.

## 2.5 Tags

You can apply the logical markup tag *Emphasized*.

You can apply the visual markup tags **Bold**, *Italics*, Roman, *Sans Serif*, *Slanted*, **SMALL CAPS**, and *Typewriter*.

You can apply the special, mathematics only, tags **BLACKBOARD BOLD**, *CALZZZ/APPLYZ*, and *putbar*. Note that backboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

You can apply the size tags *tiny*, *x-small*, *footnotesize*, *small*, *normalsize*, *large*, *Large*, *LARGE*, *huge* and *Huge*.

Following is a group of paragraphs marked as *Body Quote*. This environment is appropriate for a short quotation or a sequence of short quotations.

The buck stops here. *Harry Truman*

Ask not what your country can do for you; ask what you can do for your country. *John F. Kennedy*

I am not a crook. *Richard Nixon*

It's no exaggeration to say the undecideds could go one way or another. *George Bush*

## 2.6 Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.

2. Numbered list item 2.

(a) A numbered list item under a list item.

The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.

(b) Another numbered list item under a list item.

i. Third level numbered list item under a list item.

A. Fourth and final level of numbered list items allowed.

• Bullet item 1.

• Bullet item 2.

– Second level bullet item.

× Third level bullet item.

· Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

## 2.7 About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows simple citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

## Appendix A

### The First Appendix

The appendix fragment is used only once. Subsequent appendices can be created using the Chapter Section/Body Dig.

## Afterword

The back matter often includes one or more of an index, an afterword, acknowledgments, a bibliography, a colophon, or any other similar item. In the back matter, chapters do not produce a chapter number, but they are entered in the table of contents. If you are not using anything in the back matter, you can delete the back matter TeX field and everything that follows it.

The Title of a Standard L<sup>A</sup>T<sub>E</sub>X Conference Proceedings

A. U. Thor  
The University of Stewart Island

**Abstract**

We study the effects of warm water on the local penguin population. The major finding is that it is extremely difficult to induce penguins to drink warm water. The success factor is approximately  $e^{-\theta} - 1$ .

$x^2 + y^2 = z^2$

A short line above:

$\sin^2 \theta + \cos^2 \theta = 1$

as well a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2 Mathematics in Section Heads**

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3 Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \quad (2)$$

Page 1

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon = \Gamma_\varepsilon = \{z \in \mathbb{C}_+ : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (3)$$

Fix  $z \in \Gamma_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_+ : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \quad (4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) \\ &= r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} O(|z| + r) \\ &= \frac{1 + \sin \varepsilon}{\sin \varepsilon} O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \Gamma_\varepsilon$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \Gamma_\varepsilon/2,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

## Chapter 1

### Sample Mathematics and Text

#### 1.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^n a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^n a_i \quad (1.1)$$

is displayed and automatically numbered as equation 1.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [2].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as well a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

#### 1.2 Mathematics in Section Heads $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

#### 1.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \quad (1.2)$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (1.3)$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (1.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^n d\lambda}{(\lambda - z)^2} + R(z), \quad (1.4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (1.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon/2,$$

that implies (1.2) by substituting  $1/z$  back for  $z$ . ■

#### 2.2 Tags

You can apply the logical markup tag *Emphatical*.

You can apply the visual markup tags **Bold**, *Italics*, Roman, Sans Serif, *Slanted*, SMALL CAPS, and Typewriter.

You can apply the special, mathematics only tags **BLACKBOARD BOLD**, *CALIGRAPHIC*, and *fraktur*. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

You can apply the size tags *xx-small*, *x-small*, *small*, *normal-size*, *large*,

**Large**, **LARGE**, **huge** and **Huge**.

This is a Body Math paragraph. Each time you press the Enter key, Scientific WorkPlace switches to mathematics mode. This is convenient for carrying out "scratchpad" computations.

## Appendix A

### The First Appendix

The appendix fragment is used only once. Subsequent appendices can be created using the Chapter Section/Body Tag.

# 8 Style Editor Shells

The shells discussed in this chapter were developed with the Style Editor. Thus, you may find that modifying them by using the Style Editor is easier than by making changes within the program.

Style Editor shells produce a variety of documents: articles, books, exams, faxes, letters, memos, slides, resumes, and theses. The shells differ according to their purpose. All the shells are based on the typesetting specifications set in the base document class `sebase.cls`. You must use the Style Editor to modify the class options for `sebase.cls`.

# Article

## Document class base file: sebase.cls

Options and Packages	Defaults
Document class options	Standard
Packages:	
seart	None

The shell features generous margins with page numbers centered at the bottom of the page. The title information is simple—no abstract is included—and centered at the top of the first page. The shell includes theorem environments.

A Simple Article

A. U. Thor

**1 Sample Mathematics and Text**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**1.1 In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^n a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^n a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} |a_{n,k+1} - a_{n,k}| \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2 Mathematics in Section Heads**  $\int_0^1 t \, dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

---

<sup>1</sup> L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

1

**1.3 Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), z \in \Gamma_\varepsilon. \tag{2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$  and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^n d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$|R(z)| \leq r^{-1} \max_{\lambda \in C_r(z)} |f(\lambda)| = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) = \frac{|z| + r}{r} O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} O(|z|).$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon/2,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

**2 Section Headings**

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

**2.1 Subsection Heading**

This text appears under a subsection heading.

**2.1.1 Subsubsection Heading**

This text appears under a subsubsection heading.

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

2

**Subsubsubsection Heading** This text appears under a subsubsubsection heading.

**3 Tags**

You can apply the logical markup tag *Emphasized*.  
 You can apply the visual markup tags **Bold**, *Italics*, Roman, **Sans Serif**, *Slanted*, SMALL CAPS, and `Typewriter`.  
 You can apply the special, mathematics only tags **BLACKBOARD BOLD**, *CALIGRAPHIC*, and *fraktur*. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.  
 You can apply the size tags *tiny*, *x-small*, *small*, *normal*, *large*, *Large*.

**LARGE huge and Huge**

Following is a group of paragraphs marked as **Body Quote**. This environment is appropriate for a short quotation or a sequence of short quotations.

The buck stops here. *Harry Truman*  
 Ask not what your country can do for you; ask what you can do for your country. *John F. Kennedy*  
 I am not a crook. *Richard Nixon*  
 It's no exaggeration to say the undecideds could go one way or another. *George Bush*

**4 Lists**

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.
  - a. A numbered list item under a list item.  
 The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
  - b. Another numbered list item under a list item.
    - i. Third level numbered list item under a list item.
      - (a). Fourth and final level of numbered list items allowed.
- Bullet item 1.
- Bullet item 2.
  - Second level bullet item.
  - \* Third level bullet item.
  - . Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

**5 About the Bibliography**

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

- [1] N. Dunford and J. Schwartz, *Functional Analysis*, v. 2, John Wiley and Sons, New York, 1963.
- [2] Harstad, K. and Bellan, J., "Isolated fluid oxygen drop behavior in fluid hydrogen at rocket chamber pressures", *Int. J. Heat Mass Transfer*, 1988a, **41**, 3537-3550
- [3] Harstad, K. and Bellan, J., "The Lewis number under supercritical conditions", *Int. J. Heat Mass Transfer*, in print
- [4] Hirschfelder, J. O., Curtis, C. F. and Bird, R. B., *Molecular Theory of Gases and Liquids*, John Wiley and Sons, Inc., 1964
- [5] Prausnitz, J., Lichtenthaler, R. and de Azevedo, E., *Molecular thermodynamics for fluid-phase equilibrium*, Prentice-Hall, Inc., 1986
- [6] Reid, R. C., Prausnitz, J. M. and Poling, B. E., *The Properties of Gases and Liquids*, 4th Edition, McGraw-Hill Book Company, 1987

**Appendix A. An Appendix**

Because appendices may contain material that is supplementary rather than integral to the main text, many styles use a different numbering system for equations that appear in the appendices.

$$\frac{-b \pm \sqrt{b^2 - 4ac}}{2a} \tag{A-1}$$

The quadratic equation shown as equation A-1 is used to demonstrate how equations are numbered in the appendix.

**1.2 Mathematics in Section Heads**  $\int_0^2 \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3 Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_r = \{z \in \mathbb{C}_+ : 0 < \arg z \leq \pi - \epsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), z \rightarrow \infty, z \in \Gamma_r. \tag{2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_r \rightarrow \overline{\Gamma}_r = \{z \in \mathbb{C}_- : \pi \in \Gamma_r\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \overline{\Gamma}_r$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \epsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^{n-2} d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \epsilon}{\sin \epsilon} O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty, z \in \overline{\Gamma}_r/2$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_r/2,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

## 1 Sample Mathematics and Text

### 1.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^n a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^n a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_{n,x} = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of TeX parameters govern mathematical displays. The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

### 1.2 Mathematics in section heads $\int_0^{\pi} \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

### 1.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $C_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right).$$

<sup>1</sup> ETeX automatically selects the spacing depending on the surrounding line lengths.

5

6

Sample Mathematics and Text

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in C_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in C_+ : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $G_r(z) = \{\lambda \in C_+ : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{G_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} a_n \frac{1}{2\pi i} \int_{G_r(z)} \frac{(\lambda - z)^n d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$|R(z)| \leq r^{-1} \max_{\lambda \in G_r(z)} o(|z|) = r^{-1} \max_{\lambda \in G_r(z)} |\lambda| \cdot O(|z| + r)$$

$$= \frac{|z| + r}{r} O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} O(|z|).$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon/2,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

The shell inserts blank pages where necessary to ensure that new chapters begin on odd-numbered pages. Blank pages don't carry headers or footers and are not shown in the sample pages that follow.

## Preface

### Preface Head

This is the preface and it is created using a TeX field in a paragraph by itself. When the document is loaded, this appears in the edit window like a normal chapter, but it is actually an unnumbered chapter. The TeX field at the beginning of this paragraph sets the correct page heading for the Preface portion of the document. The preface does not appear in the table of contents.

### Acknowledgments

*Scientific Notebook* is the latest product conceived by Roger Hurter, President of *TTCI Software Research*, and his staff, in a series of electronic tools developed for the teaching, learning, and applying of mathematics. *Scientific Notebook* is a natural electronic blackboard and a syntax-free interface to the *Maple* symbolic computation system. It is an extension of *Scientific Workplace*, a TeX-based document production system. *Scientific Notebook* is elegant, easy, and powerful. It is fun to work with and makes mathematics, both elementary and advanced, accessible to a wider audience than ever before. I feel privileged to be able to use *Scientific Notebook* to make linear algebra accessible, enjoyable, and rewarding. Thank you, Roger, for your genius, dedication, and persistence.

### About the Shell

This style is based on the swagbke style. It involves the following modifications:

- The crop marks are turned off.
- The index prints in two columns instead of three.
- Definitions constitute an additional theorem-like environment.
- All definitions, theorems, etc. are numbered within chapters.
- A solution label is defined in the preamble.
- A Maple output environment is defined in the preamble.
- Additional white space is introduced between the rows of matrices for easier readability of fractional entries.
- Fonts and screen tugs, in particular screen colors, are used to enhance readability.

### About the Preamble

The preamble of this shell includes the following items:

```
"input: tclatex"
"def:solution="noindent"lbfseries Solution. ""
"newenvironment-MapleBox""STARTGRAYBOX""ENDGRAYBOX"
"renewcommand-arraysstretch"1.25"
```

The first item loads tclatex. The second one defines the solution label. The third one defines the environment used to display the result of an evaluation. It renders the result in yellow on screen and light grey in print. The last item inserts additional space between the rows of a matrix. It makes fractional entries more readable.

## 2 Chapter Head

### Mathematics Examples

Relevant material

**Example 2.1 ■ Example** *A Suitable Problem*

Each example has a label, followed by a descriptive title. Examples are numbered within chapters.

**Solution.** Solutions are introduced by the solution label.

All definitions are preceded by the definition label. Definitions are numbered within chapters.

**A linear equation in the variables  $x_1, \dots, x_n$  over the field  $\mathbb{R}$  is an equation of the form**

$a_1x_1 + \dots + a_nx_n = b,$   
where the coefficients  $a_1, \dots, a_n,$  and the constant  $b$  are in  $\mathbb{R}.$

### More Examples

**Example 2.2 ■ Example** *A Linear System with a Unique Solution*

Use *Scientific Notebook* to find a solution for the system

$$\begin{cases} x + y - z = 4 = 0 \\ 2x - y - 3z + 6 = 0 \\ -x + y + 6z = 0 \end{cases}$$

**Solution.** The following command produces a solution for the system.

```
This is a Maple Box showing the result of a Scientific Notebook computation.
{
  x + y - z - 4 = 0
  2x - y - 3z + 6 = 0 , Solution is : { x = -2/11, z = -16/11, y = 46/11 }
  -x + y + 6z = 0
}
```

**Exercises**

**Note** This is a note. Notes are unnumbered.

**Lemma 2.1** Here is a lemma. Lemmas are numbered within chapters.

**Corollary 2.2** The matrix  $T$  has can be represented as a direct sum  
 $C_{11} \oplus \cdots \oplus C_{n_1}$   
of companion matrices for a unique  $r$ , with  $C_i$  being the companion matrix of the  $T$ -annihilator of  $f(t)^{n_i}$ . Corollaries are numbered within chapters.

**Theorem 2.3 (Rational Form Theorem)** Suppose that  $T : V \rightarrow V$  is a linear transformation whose minimum polynomial over the field  $F$  of the space  $V$  is the product of the distinct irreducible monic factors  $p_1(t)^{n_1}, \dots, p_k(t)^{n_k}$ . Then  $T$  can be represented as the direct sum  
 $(C_{11} \oplus \cdots \oplus C_{1n_1}) \oplus \cdots \oplus (C_{k1} \oplus \cdots \oplus C_{kn_k})$   
of companion matrices. Each matrix  $C_{ij} \oplus \cdots \oplus C_{in_i}$  is a direct sum of the form described in Lemma 2.1.

**Proof.** See Appendix A. ■  
Theorems are numbered within chapters.

# A Additional Material

## Mathematical Induction

*Mathematical induction* is an accepted procedure for proving that certain statements concerning the natural numbers are true no matter which natural number is involved. For example, we might have a formula  $\varphi(n)$  for computing the sum  $1 + 2 + \cdots + n$ , and we want to prove that the formula works for all  $n$ . If  $n = 15$ , then the formula  $\varphi(15)$  computes the sum  $1 + 2 + \cdots + 15$ , if  $n = 1001$ , then  $\varphi(1001)$  compute the sum  $1 + 2 + \cdots + 1001$ , and so on. We would *prove* the fact that we can use the formula  $\varphi(n)$  in this way by using mathematical induction.

The reason behind mathematical induction is the fact that, as discussed above, the set  $\mathbb{N}$  of natural numbers is characterized by Peano's axioms as the set each of whose elements is either 0 or of the form  $n + 1 = (1 + 1 + \cdots + 1) + 1$ . If we can prove that  $\varphi(0)$  holds, and if we can deduce the validity of  $\varphi(n + 1)$  from the validity of  $\varphi(n)$ , then the principle of mathematical induction asserts that the statement  $\varphi(n)$  holds for all  $n \in \mathbb{N}$ .

It is clear from the given illustration, that a proof by mathematical induction consists of two parts:

1. The proof that  $\varphi(0)$  holds. This part is called the *induction basis*. Depending on the specific claim expressed by the formula  $\varphi(n)$ , the statement may actually only make sense for  $p > 0$ . In that case, the induction basis is the proof that  $\varphi(p)$  holds. We may also have to prove the validity of the first case or two by different means. This depends on the nature of the formula  $\varphi(n)$ . If the inductive basis involves more than one initial proof, the induction involved is known as *complete induction*.
2. The proof that if  $\varphi(q)$  holds for an arbitrary  $q \in \mathbb{N}$ , then  $\varphi(q + 1)$  holds. This part is called the *induction step*.

**Note** The use of the word *basis* in mathematical induction has nothing to do with the use of the word *basis* in linear algebra. It will of course always be clear from the context which meaning of the word is intended.

The following example illustrates the two parts involved in a proof by mathematical induction. It is well-known (and proved by mathematical induction) that  
 $1 + 2 + \cdots + n = \frac{n(n+1)}{2} = \varphi(n)$   
for all  $n \in \mathbb{N}$ . We would prove  $\varphi(2)$  by observing that, indeed,  
 $1 + 2 = 3 = \frac{2(2+1)}{2}$

We would then show how we can deduce the validity of  $\varphi(q + 1)$  from the assumed validity of  $\varphi(q)$ :

Suppose that  
 $1 + 2 + \cdots + q = \frac{q(q+1)}{2}$ .

Then  
 $1 + 2 + \cdots + q + (q + 1) = \frac{q(q+1)}{2} + (q + 1)$   
 $= \frac{q(q+1)}{2} + \frac{2(q+1)}{2}$   
 $= \frac{(q+2)(q+1)}{2}$   
 $= \frac{(q+1)(q+2)}{2}$

The principle of mathematical induction therefore allows us to conclude that  $\varphi(n)$  holds for all  $n$ . (In this case all  $n \geq 2$ , since the expression makes no sense for  $n = 0$  or  $n = 1$ .)

In finite-dimensional linear algebra, statements of the form  $\varphi(n)$  are usually statements asserting that a certain fact  $\varphi$  hold for spaces of all dimensions  $n \in \mathbb{N}$ . Since there is a space of dimension 0, we would have to prove that  $\varphi(0)$  holds. We may also have to prove, in addition, that  $\varphi(1)$  holds, if the validity of  $\varphi(1)$  does not follow from that of  $\varphi(0)$ , given the triviality of the space  $V = \{0\}$ . Other types of proofs in linear algebra using mathematical induction are proofs about linear combinations of arbitrary length, or polynomials of arbitrary degrees.

### Sigma Notation

Another important application of mathematics induction is the definition of the "sigma notation." Arithmetical statements in linear algebra are often about sums made up of a fixed but "arbitrary" number of terms. There are two basic ways of dealing with this situation. We can either use an *ellipsis* (three dots) to represent missing elements as in  $v_1 + \cdots + v_n$ , or we can use variable subscripts and the capital sigma and write

### Sigma Notation 7

$\sum_{i=1}^n v_i$ . Both expressions have the same meaning. The sigma notation is defined by mathematical induction.

**Proposition 2.4** If  $n = 1$ , then  $\sum_{i=1}^n v_i = v_1$ , and if  $n = k + 1$ , then  $\sum_{i=1}^n v_i = (\sum_{i=1}^k v_i) + v_n$ .

In this text, the expression  $\sum_{i=1}^n v_i$  is usually written less formally as " $v_1 + \cdots + v_n$ " using the *ellipsis* "...". Although the use of ellipses is avoidable in the case of  $\sum_{i=1}^n v_i$ , there are many situations in linear algebra where ellipses are an essential part of the notation. For example, we frequently need to refer to *finite sequences* of vectors of unspecified length  $n$ , such as  $v_1, \dots, v_n$  and to *finite arrays* of elements of unspecified dimensions  $m$  and  $n$ , such as

$$\begin{bmatrix} a_{11} & \cdots & a_{1n} \\ \vdots & & \vdots \\ a_{m1} & \cdots & a_{mn} \end{bmatrix}$$

In these situations, horizontal, vertical, and diagonal ellipses are used to indicate possibly missing terms.

## Book - Jonathan Lewin's Book

### Document class base file: sebase.cls

Options and Packages	Defaults
Document class options	Standard
Packages:	
makeidx	None
jlbook	None

The shell inserts blank pages to ensure that page numbering is correct. The pages are marked for removal by the publisher and are not shown in the sample pages that follow.

### Preface

This is the preface and it is created using a TeX field in a paragraph by itself. When the document is loaded, this appears in the edit window like a normal chapter, but it is actually an unnumbered chapter. The TeX field at the beginning of this paragraph sets the correct page heading for the Preface portion of the document. The preface does not appear in the table of contents.

## Chapter 1 Sample Mathematics and Text

### 1.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1.1}$$

is displayed and automatically numbered as equation 1.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{i,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^+ \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ .

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

### 1.2 Mathematics in Section Heads $\int_0^1 \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause diffculties in typesetting styles with running headers or table of contents entries.

<sup>1</sup> L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

### 1.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon \tag{1.2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{1.3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (1.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{1.4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (1.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon/2,$$

that implies (1.2) by substituting  $1/z$  back for  $z$ . ■

1. The table of contents field at the top of this document is needed. The table of contents is called for differently in the style editor book styles.

## Appendix A Additional Material

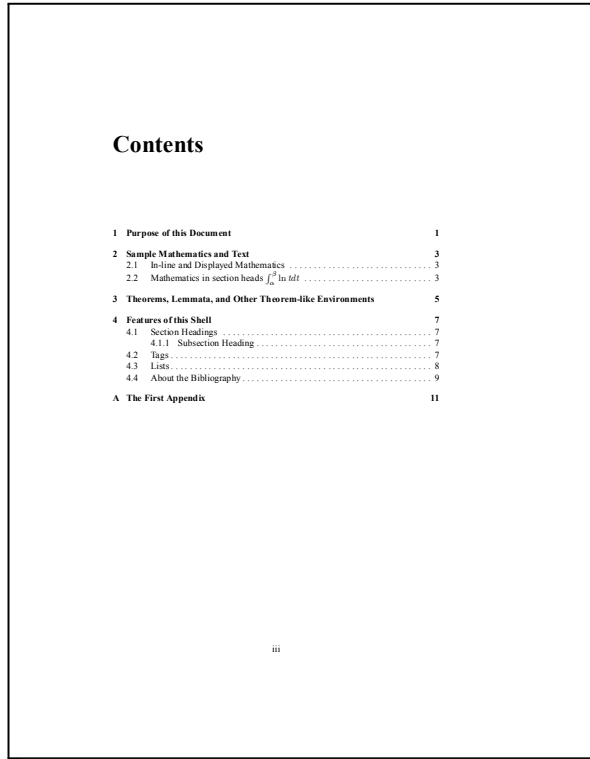

This is some additional material. The header is created using an appendix tag. When the document is loaded, this appears in the edit window like a normal chapter, but it is actually an unnumbered chapter. The appendix appears in the table of contents.

## Book - L<sup>A</sup>T<sub>E</sub>X-like Book

### Document class base file: sebase.cls

Options and Packages	Defaults
Document class options	Standard
Packages:	
selbk	None

The shell inserts blank pages where necessary to ensure that new chapters begin on odd-numbered pages. Blank pages don't carry headers or footers and are not shown here.

## Chapter 1

### Purpose of this Document

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

## Chapter 2

### Sample Mathematics and Text

#### 2.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^n a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^n a_i \tag{2.1}$$

is displayed and automatically numbered as equation 2.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a non-expansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{n-1} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{n-1} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of BBX parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:  $x^2 + y^2 = z^2$

and a short line below.  $\sin^2 \theta + \cos^2 \theta = 1$

A long line above may depend on your margins

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

#### 2.2 Mathematics in section heads $\int_0^{\beta} \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

<sup>1</sup>BBX automatically detects the spacing depending on the surrounding line lengths.

## Chapter 3

### Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $C_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right)$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\alpha = \{z \in C_+ : 0 < \arg z \leq \pi - \alpha\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), z \rightarrow \infty, z \in \Gamma_\alpha. \tag{3.2}$$

**Lemma 2** Change  $z$  for  $1/z$ . Then  $\overline{\Gamma}_\alpha = \overline{\Gamma}_\alpha = \{z \in C_+ : \overline{\pi} \in \Gamma_\alpha\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3.3}$$

Fix  $z \in \overline{\Gamma}_\alpha$ , and let  $C_r(z) = \{\lambda \in C_+ : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \alpha/2$ . It follows from (3.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^{n-2} d\lambda}{(\lambda - z)^2} + R(z), \tag{3.4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|\lambda|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} O(|z| + r) = \frac{1 + \sin \alpha}{\sin \alpha} O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\alpha$ , and hence by the Cauchy theorem (3.4) implies

$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1$ , as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\alpha/2$ , that implies (3.2) by substituting  $1/z$  back for  $z$ .

**Lemma 3** Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a non-expansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{n-1} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{n-1} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ .

## Chapter 4

### Features of this Shell

#### 4.1 Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

##### 4.1.1 Subsection Heading

This text appears under a subsection heading. This is some text to fill out the page. This is some text to fill out the page. This is some text to fill out the page. This is some text to fill out the page. This is some text to fill out the page.

#### 4.2 Tags

You can apply the logical markup tag *Emphasized*.

7

Chapter 4. Features of this Shell

8

You can apply the visual markup tags **Bold**, *Italics*, Roman, **Sans Serif**, *Slanted*, **SMALL CAPS**, and *TypeWriter*.

You can apply the special, mathematics only, tags **traktur**, **BLACKBOARD BOLD**, and *CALIGRAPHIC*. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

You can apply the size tags *x-small*, *small*, *normal*, *large*, **Large**, **LARGE**, **huge** and **Huge**.

Following is a group of paragraphs marked as Body Quote. This environment is appropriate for a short quotation or a sequence of short quotations.

The buck stops here. *Harry Truman*  
 Ask not what your country can do for you; ask what you can do for your country.  
*John F. Kennedy*  
 I am not a cook. *Richard Nixon*  
 It's no exaggeration to say the undecideds could go one way or another. *George Bush*

#### 4.3 Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.
  - (a) A numbered list item under a list item.  
 The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
  - (b) Another numbered list item under a list item.
    - i. Third level numbered list item under a list item.
      - A. Fourth and final level of numbered list items allowed.

- Bullet item 1.
- Bullet item 2.
  - Second level bullet item.
    - \* Third level bullet item.
    - Fourth and final level bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

9

4.4 About the Bibliography

**Bunyip** Mythical beast of Australian Aboriginal legends.

#### 4.4 About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [5], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

## Appendix A

### The First Appendix

The appendix fragment is used only once. Subsequent appendices can be created using the Chapter Section/Body Tag.

### 1.1 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : |\lambda - z| = r\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_\varepsilon(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} a_{n+1} \frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{(\lambda - z)^n d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_\varepsilon(z)} o(|z|) = r^{-1} \max_{\lambda \in C_\varepsilon(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned} \tag{5}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon, \tag{6}$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

## 2.0 Manual Numbering

In the book production process, automatic numbering causes problems because there is the chance that some editing change in the source file will change the number of a section, equation, list item, etc. This can lead to inaccuracies or missed corrections during copy-editing.

3

## 2.1 Graphing Calculator Section

Most graphing calculators and computer graphing programs can be used to graph curves defined by parametric equations. In fact, it is instructive to watch a parametric curve being drawn by a graphing calculator because the points are plotted in order as the corresponding parameter values increase.

### Exercises 2.1

1-15 ■

- (a) Sketch the curve represented by the parametric equations.
- (b) Eliminate the parameter to find the Cartesian equation of the curve.

1.  $x = 1 - t, y = 2 + 3t$
2.  $x = 2t - 1, y = 2 - t, -2 \leq t \leq 3$
3.  $x = 3t^2, y = 2 + 5t, 0 \leq t \leq 2$
4.  $x = 2t - 1, y = t^2 - 1$
5.  $x = \sqrt{t}, y = 1 - t$
6.  $x = t^2, y = t^3$
7.  $x = \sin \theta, y = \cos \theta, 0 \leq \theta \leq \pi$
8.  $x = 3 \cos \theta, y = 2 \sin \theta, 0 \leq \theta \leq 2\pi$
9.  $x = \sin^2 \theta, y = \cos^2 \theta$
10.  $x = \sec \theta, y = \tan \theta, -\pi/2 < \theta < \pi/2$
11.  $x = 2t - 1, y = t^2 - 1$
12.  $x = \sqrt{t}, y = 1 - t$
13.  $x = t^2, y = t^3$
14.  $x = \sin \theta, y = \cos \theta, 0 \leq \theta \leq \pi$
15.  $x = 3 \cos \theta, y = 2 \sin \theta, 0 \leq \theta \leq 2\pi$

4

## 3.0 Headings and Tags

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a non-expansive self map of  $C$ . Suppose that as  $n \rightarrow \infty, a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ .  
 Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

5

3.0 Headings and Tags

### 3.1 Section About Tags

Use the Section tag for major sections like this one. These text tags are available. You can apply the logical markup tag *Emphasized*.

You can apply the visual markup tags **Bold**, *Italics*, Roman, **Sans Serif**, *Slanted*, **SMALL CAPS**, and **Typeset** etc.

You can apply the special, mathematics only, tags **frown**, **BLACKBOARD BOLD**, and **CALIGRAPHIC**. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

You can apply the size tags , **superscript**, *small*, **normalsize**, **large**, **Large**.

**LARGE huge and Huge**  
 This is a Body Math paragraph. Each time you press the Enter key, Scientific WorkPlace switches to mathematics mode. This is convenient for carrying out "scratchpad" computations. Following is a group of paragraphs marked as Body Quote. This environment is appropriate for a short quotation or a sequence of short quotations.

The buck stops here. *Harris Truman*  
 Ask not what your country can do for you; ask what you can do for your country. *John F. Kennedy*  
 I am not a crook. *Richard Nixon*  
 It's no exaggeration to say the undecideds could go one way or another. *George Bush*

6

#### 3.1.1 Subsection

This is some harmless text under a subsection.

##### 3.1.1.1 Subsubsection

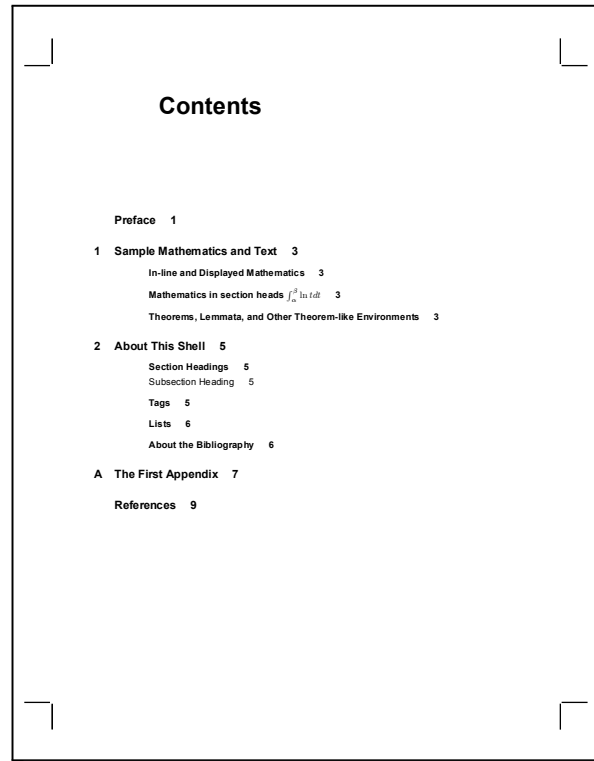

This is some harmless text under a subsubsection.

## Book - User's Guide

### Document class base file: `sebase.cls`

Options and Packages	Defaults
Document class options	Standard
Packages:	
swugbk	None

The shell prints crop marks on each page. It inserts blank pages where necessary to ensure that new chapters begin on odd-numbered pages. Blank pages don't carry headers and are not shown in the sample pages that follow.

# 1 Sample Mathematics and Text

## In-line and Displayed Mathematics

The expression  $\sum_{i=1}^n a_i$  is in-line mathematics, while the numeral equation

$$\sum_{i=1}^n a_i \tag{1}$$

is displayed and automatically numbered as equation 1. Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=1}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=1}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of TeX parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:  $x^2 + y^2 = z^2$

and a short line below:  $\sin^2 \theta + \cos^2 \theta = 1$

A long line above may depend on your margins  
 as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

## Mathematics in section heads $\int_0^1 \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

## Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

<sup>1</sup> ETeX automatically selects the spacing depending on the surrounding line lengths.

## 4 Chapter 1 Sample Mathematics and Text

**Lemma 1** Let  $f(z)$  be an analytic function in  $C_r$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right).$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_r = \{z \in C_r : 0 < \epsilon \leq \arg z \leq \pi - \epsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), z \rightarrow \infty, z \in \Gamma_r. \tag{2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_r \rightarrow \overline{\Gamma}_r = \{z \in C_r : -\pi \leq \arg z \leq \pi\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \overline{\Gamma}_r$ , and let  $C_r(z) = \{\lambda \in C_r : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \pi/2$ . It follows from (1) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{k=0}^{\infty} a_{k+1} \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^{k-1} d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$|R(z)| \leq r^{-1} \max_{\lambda \in C_r(z)} |f(\lambda)| = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) = \frac{|z| + r}{r} O(|z| + r) = \frac{1 + \sin \pi}{\sin \pi} O(|z|).$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty, z \in \overline{\Gamma}_r$ , and hence by the Cauchy theorem (1) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_r/2,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

# 2 About This Shell

## Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

### Subsection Heading

This text appears under a subsection heading.

### Subsubsection Heading

This text appears under a subsubsection heading.

### Subsubsubsection Heading

This text appears under a subsubsubsection heading.

## Tags

You can apply the logical markup tag *Emphasized*. You can apply the visual markup tags **Bold**, *Italic*, Roman, **Sans Serif**, *Slanted*, SMALL CAPS, and `Typewriter`. You can apply the special, mathematics only, tags `fretur`, **BLACKBOARD BOLD**, and *CAL* `LIGR`, `AP`, `MLC`. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

You can apply the size tags `em`, `normsize`, `small`, `normsize`, `large`, `Large`, `LARGE`, `huge` and `Huge`. Following is a group of paragraphs marked as Body Quote. This environment is appropriate for a short quotation or a sequence of short quotations.

The buck stops here. *Harry Truman*  
 Ask not what your country can do for you; ask what you can do for your country.  
*John F. Kennedy*  
 I am not a crook. *Richard Nixon*  
 It's no exaggeration to say the undecideds could go one way or another. *George Bush*

# References

The back matter often includes one or more of an index, an afterword, acknowledgements, a bibliography, a colophon, or any other similar item. In the back matter, chapters do not produce a chapter number, but they are entered in the table of contents.

## Book #1

### Document class base file: sebase.cls

Options and Packages	Defaults
Document class options	Standard
Packages:	
sebook1	None

The shell produces documents with simple formatting appropriate for books. New chapters begin on the next consecutive page. Section headings appear at the left margin. Running headers and page numbers are centered at the top and bottom of the page, respectively. The shell has theorem environments.

**Preface**

This is the preface and it is created using a TeX field in a paragraph by itself. When the document is loaded, this appears in the edit window like a normal chapter, but it is actually an unnumbered chapter. The TeX field at the beginning of this paragraph sets the correct page heading for the Preface portion of the document. The preface does not appear in the table of contents.

**Chapter 1  
Purpose of this Document**

This short sample document illustrates the typeset appearance of in-line and displayed mathematics in documents. It also illustrates five levels of section headings and three kinds of lists. Finally, the document includes entries for a manual bibliography and an appendix.

**Chapter 2  
Sample Mathematics and Text**

**2.1 In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{2.1}$$

is displayed and automatically numbered as equation 2.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>3</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below:

$$\sin^2 \theta + \cos^2 \theta = 1$$

A long line above may depend on your margins:

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**2.2 Mathematics in section heads**  $\int_0^1 \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**2.3 Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

<sup>3</sup> L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

Chapter 2 Sample Mathematics and Text

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{2.2}$$

**Lemma 2** Change  $z$  for  $1/z$ . Then  $\Gamma_+ = \overline{\Gamma}_+ = \{z \in \mathbb{C}_- : \overline{z} \in \Gamma_+\}$  and

$$f(1/z) = a_0 + a_1 z + o(z).$$

Fix  $z \in \overline{\Gamma}_+$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (2.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} c_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^n d\lambda}{(\lambda - z)^2} + R(z), \tag{2.4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_+$ , and hence by the Cauchy theorem (2.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_+,$$

that implies (2.2) by substituting  $1/z$  back for  $z$ .

Chapter 3 About This Shell

## Chapter 3 About This Shell

### 3.1 Section Headings

Use the Section tag for major sections, such as the one just above. Four additional heading levels are available, as described below.

#### 3.1.1 Subsection Heading

This text appears under a subsection heading.

##### 3.1.1.1 Subsubsection Heading

This text appears under a subsubsection heading.

##### 3.2 Tags

You can apply the logical markup tag *Emphasized*.

You can apply the visual markup tags **Bold**, *Italics*, Roman, **Sans Serif**, *Strut*, **SMALL CAPS**, and *Typewriter*.

You can apply the special, mathematics only, tags `fraction`, **BLACKBOARD BOLD**, and *CALIGRAPHIC*. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

You can apply the size tags *script*, *footnote*, *small*, *normal*, *large*, **Large**, **LARGE**, **huge**, and **Huge**.

Chapter 3 About This Shell

### 3.3 Lists

Bullet, numbered and description list environments are available. Lists, which can extend four levels deep, look like this:

1. Numbered list item 1.
2. Numbered list item 2.
  - a. A numbered list item under a list item. The typeset appearance for this level is often different from the screen appearance. The typeset appearance often uses parentheses around the level indicator.
  - b. Another numbered list item under a list item.
    - i. Third level numbered list item under a list item.
      - (a). Fourth and final level of numbered list items allowed.

- Bullet item 1.
- Bullet item 2.
  - Second level bullet item.
    - \* Third level bullet item.
      - . Fourth and final level of bullet item.

**Description List** Each description list item has a lead-in followed by the item. Double-click the lead-in box to enter or customize the text of the lead-in.

**Bunyip** Mythical beast of Australian Aboriginal legends.

8

## Chapter 4 About the Bibliography

Following the text of this article is a short manual bibliography. This sample bibliography has no relationship to the previous text, but it shows sample citations such as [4], [5] and [6]. You can also have multiple citations appear together. Here is an example: [2, 3, 4].

9

Appendix A The First Appendix

## Appendix A The First Appendix

The appendix fragment is used only once. Subsequent appendices can be created using the Chapter Section/Body Tag.

Preface

This is the preface and it is created using the preface tag from the Section/Body Tag toolbar. The preface does appear in the table of contents.

**1 Sample Mathematics and Text**

**In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^n a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^n a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of  $\LaTeX$  parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**Mathematics in Section Heads  $\int_a^b \ln t dt$**

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

<sup>1</sup>  $\LaTeX$  automatically selects the spacing depending on the surrounding line lengths.

Contents 3

**Lemma 1** Let  $f(z)$  be an analytic function in  $C_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in C_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), z \rightarrow \infty, z \in \Gamma_\varepsilon. \quad (2)$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in C_+ : z \in \overline{\Gamma}_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (3)$$

Fix  $z \in \overline{\Gamma}_\varepsilon$  and let  $C_r(z) = \{\lambda \in C_+ : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^n d\lambda}{(\lambda - z)^2} + R(z), \quad (4)$$

where for the remainder  $R(z)$  we have

$$|R(z)| \leq r^{-3} \max_{\lambda \in C_r(z)} o(|z|) = r^{-3} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) = \frac{|z| + r}{r} O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|).$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

**2 Section Headings**

Use the Section tag for major sections, and the Subsection tag for subsections.

**Subsection**  
This is some harmless text under a subsection.

**Subsubsection**  
This is some harmless text under a subsubsection.

**Subsubsubsection** This is some harmless text under a subsubsubsection.  
(Subsubsubsubsection lead):Subsubsubsubsection  
This is some harmless text under a subsubsubsubsection.

**Tags**  
You can apply the logical markup tag Emphasized.

4 Contents

You can apply the visual markup tags Bold, Italics, Roman, Sans Serif, Skewed, Small Caps, and Typewriter.

You can apply the special mathematics only tags `forall`, `BLACKBOARD BOLD`, and `CALZEGRAPHIC`. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

You can apply the size tags `tiny`, `x-tiny`, `xx-small`, `small`, `normal-size`, `large`, `Large`, `LARGE`, `huge` and `Huge`.

This is a Body Math paragraph. Each time you press the Enter key, Scientific WorkPlace switches to mathematics mode. This is convenient for carrying out "scratchpad" computations. Following is a group of paragraphs marked as Body Quote. This environment is appropriate for a short quotation or a sequence of short quotations.

The buck stops here. Harry Truman  
Ask not what your country can do for you; ask what you can do for your country. John F. Kennedy  
I am not a crook. Richard Nixon  
It's no exaggeration to say the undecideds could go one way or another. George Bush

**List Environments**

You can create numbered, bulleted, and description lists using the tag popup at the bottom left of the screen.

1. List item 1
2. List item 2

a. A list item under a list item.

The typeset style for this level is different than the screen style. The screen shows a lower case alphabetic character followed by a period while the typeset style uses a lower case alphabetic character surrounded by parentheses.

- b. Just another list item under a list item.
  - 1 Third level list item under a list item.
    - (1) Fourth and final level of list items allowed.

- Bullet item 1
- Bullet item 2
  - Second level bullet item.
    - Third level bullet item.
    - Fourth (and final) level bullet item.

**Description List** Each description list item has a term followed by the description of that term. Double click the term box to enter the term, or to

Contents 5

change it.

**Bunyip** Mythical beast of Australian Aboriginal legends.

Solutions to Some Problems

Here are the solutions to the problems in this chapter.

1.  $x = 1 - t, y = 2 + 3t$
2.  $x = 2t - 1, y = 2 - t, -3 \leq t \leq 3$
3.  $x = 3t^2, y = 2 + 5t, 0 \leq t \leq 2$
4.  $x = 2t = 1, y = t^2 - 1$
5.  $x = \sqrt{t}, y = 1 - t$
6.  $x = t^2, y = t^3$
7.  $x = \sin \theta, y = \cos \theta, 0 \leq \theta \leq \pi$
8.  $x = 3 \cos \theta, y = 2 \sin \theta, 0 \leq \theta \leq 2\pi$
9.  $x = \sin^2 \theta, y = \cos^2 \theta$
10.  $x = \sec \theta, y = \tan \theta, -\pi/2 < \theta < \pi/2$

The First Appendix

Subsequent appendices can be created using the Section tag.

## General - Simple WYSIWYG

### Document class base file: sebase.cls

Options and Packages	Defaults
Document class options	Standard
Packages:	
wysiwyg	None

Documents produced by this shell have no front matter. They have a simple format with somewhat narrow margins and no page numbers. Headings are left-justified. The shell contains theorem environments.

**1 Sample Mathematics and Text**

**1.1 In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=1}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=1}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of  $\LaTeX$  parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below:

$$\sin^2 \theta + \cos^2 \theta = 1$$

A long line above may depend on your margins

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2 Mathematics in Section Heads**

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3 Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** *Let  $f(z)$  be an analytic function in  $C_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

*for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in C_+ : 0 < \arg z \leq \pi - \varepsilon\}$  then*

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{2}$$

Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in C_+ : z \in \bar{\Gamma}_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in C_+ : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^n d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$|R(z)| \leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r)$$

$$= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|).$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty, z \in \bar{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (4) implies

<sup>1</sup>  $\LaTeX$  automatically selects the spacing depending on the surrounding line lengths.

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \bar{\Gamma}_\varepsilon/2,$$

that implies (2) by substituting  $1/z$  back for  $z$ .

**2 Section Headings**

Use the Section tag for major sections, and the Subsection tag for subsections.

**2.1 Subsection**

This is some harmless text under a subsection.

**2.1.1 Subsubsection**

This is some harmless text under a subsubsection.

**2.2 Tags**

You can apply the logical markup tag *Emphasized*.

You can apply the visual markup tags **Bold**, *Italics*, Roman, **Sans Serif**, *Slanted*, **SMALL CAPS**, and `typewriter`.

You can apply the special, mathematics only, tags `fraktur`, **BLACKBOARD BOLD**, and *CALYGRAPHIC*. Note that blackboard bold and calligraphic are correct only when applied to upper-case letters A through Z.

You can apply the size tags *small*, *scriptsize*, *footnotesize*, *small*, *normalsize*, *large*, **Large**, **LARGE**.

**huge** Huge

This is a Body Math paragraph. Each time you press the Enter key, Scientific WorkPlace switches to mathematics mode. This is convenient for carrying out "scratchpad" computations. Following is a group of paragraphs marked as Body Quote. This environment is appropriate for a short quotation or a sequence of short quotations.

The back steps here: *Harry Truman*  
 Ask not what your country can do for you; ask what you can do for your country. *John F. Kennedy*  
 I am not a crook. *Richard Nixon*  
 It's no exaggeration to say the undecideds could go one way or another. *George Bush*

**2.3 List Environments**

You can create numbered, bulleted, and description lists using the tag popup at the bottom left of the screen.

1. List item 1
2. List item 2
  - (a) A list item under a list item.  
 The typeset style for this level is different than the screen style. The screen shows a lower case alphabetic character followed by a period while the typeset style uses a lower case alphabetic character surrounded by parentheses.
  - (b) Just another list item under a list item.  
 (i) Third level list item under a list item.  
 (A) Fourth and final level of list items allowed.

- Bulleted item 1

- Bullet item 2
  - Second level bullet item.
    - \* Third level bullet item.
      - o Fourth (and final) level bullet item.

Descríp. List Each description list item has a term followed by the description of that term. Double click the term box to enter the term, or to change it.

Buayip Mythical beast of Australian Aboriginal legends.

Subject: Information request

Replace this with your text. Here is the information you requested about our products. Scientific WorkPlace and Scientific Word make writing and doing mathematics easier than you ever imagined possible. The Gold Standard for mathematical publishing since 1992, these scientific word processors increase your productivity because they are easy to learn and use. You can compose and edit your documents directly on the screen, without being forced to think in a programming language. A simple click of a button allows you to typeset your document in LaTeX. This lets you concentrate on writing a correct paper, while our software ensures it is a beautiful one. Scientific WorkPlace and Scientific Word enable both professional and support staff to produce stunning results quickly and easily, without having to know TeX or LaTeX.

*Doing Mathematics with Scientific WorkPlace and Scientific Notebook* describes how to use the built-in computer algebra system to do a wide range of mathematics without dealing directly with the syntax of the computer algebra system. This book is organized around the undergraduate mathematics curriculum for ease of use by beginners through professionals. Chapters 1-5 give you basic procedures for using the system, illustrated with material from the standard precalculus courses. Chapter 6 provides examples and instructions for creating graphs of curves and surfaces. Chapters 7-12 provide procedures for using the system for problems in analytic geometry and calculus, linear algebra, vector analysis, differential equations, statistics, and applied modern algebra. The manual includes exercises and sample solutions to help you practice the ideas presented and to suggest possibilities to explore beyond those covered in the manual.

Sincerely,

Barry

Much Ado About Nothing

William Shakespeare

Act 5

Scene 4

A room in Leonato's house.

Enter Leonato,  
Antonio,  
Benedick,  
Beatrice,  
Margaret,  
Ursula, Friar  
Francis, and  
Hero

**Friar Francis**  
Did I not tell you she was innocent?

**Leonato**  
So are the prince and Claudio, who accused her  
Upon the error that you heard debated:  
But Margaret was in some fault for this,  
Although against her will, as it appears  
In the true course of all the question.

**Antonio**  
Well, I am glad that all things sort so well.

**Benedick**  
And so am I, being eke by faith enforced  
To call young Claudio to a reckoning for it.

**Leonato**  
Well, daughter, and you gentle-women all,  
Withdraw into a chamber by yourselves,

1

And when I send for you, come hither mask'd.

Exeunt Ladies

The prince and Claudio promised by this hour  
To visit me. You know your office, brother:  
You must be father to your brother's daughter  
And give her to young Claudio.

**Antonio**  
Which I will do with confirm'd countenance.

**Benedick**  
Friar, I must entreat your pains, I think.

**Friar Francis**  
To do what, signior?

**Benedick**  
To bind me, or undo me, one of them.  
Signior Leonato, truth it is, good signior,  
Your niece regards me with an eye of favour.

**Leonato**  
That eye my daughter lent her: 'tis most true.

**Benedick**  
And I do with an eye of love require her.

**Leonato**  
The sight whereof I think you had from me,  
From Claudio and the prince: but what's your will?

**Benedick**  
Your answer, sir, is enigmatical:  
But, for my will, my will is your good will  
May stand with ours, this day to be conjoin'd  
In the state of honourable marriage:  
In which, good friar, I shall desire your help.

**Leonato**  
My heart is with your liking.

**Friar Francis**  
And my help.  
Here comes the prince and Claudio.

Enter Don

2

Pedro and  
Claudio, and  
two or three  
others

**Don Pedro**  
Good morrow to this fair assembly

**Leonato**  
Good morrow, prince; good morrow, Claudio:  
We here attend you. And you yet determined  
To-day to marry with my brother's daughter?

**Claudio**  
I'll hold my mind, were she an Ethiopie.

**Leonato**  
Call her forth, brother; here's the friar ready.

Exit Antonio

**Don Pedro**  
Good morrow, Benedick. Why, what's the matter,  
That you have such a February face,  
So full of frowns, of storms and cloudiness?

**Claudio**  
I think he thinks upon the savage bull.  
Tush, fear not, man; we'll tip thy horns with gold  
And all Europa shall rejoice at thee;  
As once Europa did at lusty Jove,  
When he would play the noble beast in love.

**Benedick**  
Bull love, sir, had an amiable low;  
And some such strange bull keep'd your father's cow,  
And got a calf in that same noble feat  
Much like to you, for you have just his bleat.

**Claudio**  
For this I owe you: here comes other reckonings.

Re-enter  
Antonio, with  
the Ladies  
masked

Which is the lady I must seize upon?

3

**Chapter 1**  
**Sample Mathematics and Text**

**1.1 In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below

$$\sin^2 \theta + \cos^2 \theta = 1$$

A long line above may depend on your margins

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2 Mathematics in Section Heads  $\int_a^b \ln t dt$**

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries. Here is a figure.

**1.3 Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

---

<sup>1</sup> L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

4

Section 1.3 Theorems, Lemmata, and Other Theorem-like Environments

**Lemma 1** Let  $f(z)$  be an analytic function in  $C_r$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in C_r : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in C_r : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$  and let  $C_r(z) = \{\lambda \in C_r : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} a_{m+1} \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^{m-1} d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$|R(z)| \leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r)$$

$$= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{|z| + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|).$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

**Chapter 2**  
**Features of this Shell**

**2.1 Section Headings**

Use the Section tag for major sections, and the Subsection tag for subsections.

**2.1.1 Subsection**

This is some harmless text under a subsection.

**2.1.1.1 Subsubsection**

This is some harmless text under a subsubsection.

**Subsubsubsection** This is some harmless text under a subsubsubsection. (Subsubsubsection head)Subsubsubsection

This is some harmless text under a subsubsubsection.

**2.2 Tags**

You can apply the logical markup tag *Emphazized*.

You can apply the visual markup tags **Bold**, *Italics*, Roman, **Sans Serif**, *Slanted*, **SMALL CAPS**, and **Typewriter**.

You can apply the special, mathematics only, tags **BLACKBOARD BOLD**, *CALIGRAPHIC*, and *fretur*. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters *A* through *Z*.

You can apply the size tags *xx-small*, *x-small*, *small*, *normal*, *large*, **Large**, **LARGE**, **huge**, and **Huge**.

This is a Body Math paragraph. Each time you press the Enter key, Scientific Workplace switches to mathematics mode. This is convenient for carrying out "scratchpad" computations. Following is a group of paragraphs marked as Body Quote. This environment is appropriate for a short quotation or a sequence of short quotations.

The back stops here. *Harry Truman*

Ask not what your country can do for you; ask what you can do for your country. *John F. Kennedy*

I am not a crook. *Richard Nixon*

It's no exaggeration to say the undecideds could go one way or another. *George Bush*

6

## Chapter 3 List Environments

You can create numbered, bulleted, and description lists using the tag popup at the bottom left of the screen.

1. List item 1
2. List item 2
  - a. A list item under a list item.  
The typeset style for this level is different than the screen style. The screen shows a lower case alphabetic character followed by a period while the typeset style uses a lower case alphabetic character surrounded by parentheses.
  - b. Just another list item under a list item.
    - i. Third level list item under a list item.
    - (a). Fourth and final level of list items allowed.

- Bullet item 1
- Bullet item 2
  - Second level bullet item.
  - Third level bullet item.
  - Fourth (and final) level bullet item.

**Description List** Each description list item has a term followed by the description of that term. Double click the term box to enter the term, or to change it.

**Bunyip** Mythical beast of Australian Aboriginal legends.

## References

The back matter often includes one or more of an index, an afterword, acknowledgments, a bibliography, a colophon, or any other similar item. In the back matter, chapters do not produce a chapter number, but they are entered in the table of contents. If you are not using anything in the back matter, you can delete the back matter TeX field and everything that follows it.

## Appendix A The First Appendix

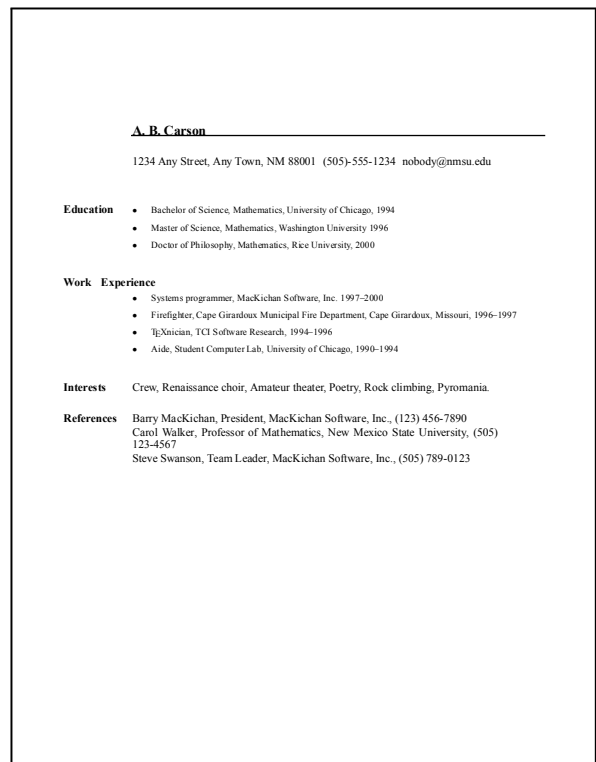

The appendix fragment is used only once. Subsequent appendices can be created using the Chapter Section/Body Tag.

## Resume #1

### Document class base file: `sebase.cls`

Options and Packages	Defaults
Document class options	Standard
Packages:	
seresl	None

This simple shell includes front matter fields in the body of the document for entering the name, address, telephone, and email address of the resume writer.

## Slides - Jim's Landscape

### Document class base file: sebase.cls

Options and Packages	Defaults
Document class options	Standard
Packages:	
SESlideJimsLandscape	None

The pages produced by this shell use wide margins and an oversized font in a landscape layout for A4 paper. New sections cause page breaks. Pages are numbered.

## Thesis - Harvard Thesis

### Document class base file: sebase.cls

Options and Packages	Defaults
Document class options	Standard
Packages:	
float	None
makeidx	None
seharv	None

The front matter is blank, but the body of the document contains title page fields to be completed with the title, name of author, department, degree name, field, university, and thesis date. Additional fields include the abstract, acknowledgments, preface, and contents.

The shell adds blank pages where necessary to ensure that new chapters begin on an odd-numbered page. Blank pages carry headers with page numbers, but are not shown here.

### Abstract

Put the abstract here. The abstract must have a (1) statement of the problem, (2) an exposition of methods and procedures, and (3) a summary of the findings. The length may not exceed 350 words.

### Acknowledgments

The acknowledgment is the place to thank the faculty, staff, family, and friends who have assisted you in preparing your thesis or dissertation. You may also acknowledge any support or special research materials given you.

Copyright permissions may also be acknowledged here by stating that: (1) permission has been granted for reproduction of tables, tests, and other copyright protected items and (2) gives the source of the permission.

Use a Preface rather than Acknowledgments when the research is discussed, for example, "the motivation for the study, the background of the project, the scope of the research, and the purpose of the paper" (Turabian, 1996, p. 7-8).

(Note: The Acknowledgments section is optional.)

### Preface

This is the preface and it is created using a TeX field in a paragraph by itself. When the document is loaded, this appears in the edit window like a normal chapter, but it is actually an unnumbered chapter. The TeX field at the beginning of this paragraph sets the correct page heading for the Preface portion of the document. The preface does not appear in the table of contents.

## Chapter 1 Sample Mathematics and Text

### 1.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1.1}$$

is displayed and automatically numbered as equation 1.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a non-expansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ .

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

---

<sup>1</sup> L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

2

1.3 Theorems, Lemmata, and Other Theorem-like Environments 3

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

### 1.2 Mathematics in Section Heads $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

### 1.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $C_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right), \tag{1.2}$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in C_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), z \in \Gamma_\varepsilon. \tag{1.3}$$

**Proof** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in C_- : \pi \in \bar{\Gamma}_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{1.4}$$

1.A Appendix to Chapter 1 4

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in C_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (1.4) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} \frac{a_n}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^n d\lambda}{(\lambda - z)^2} + R(z), \tag{1.5}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

**Corollary 1** Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (1.5) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \bar{\Gamma}_\varepsilon/2,$$

that implies (1.3) by substituting  $1/z$  back for  $z$ .

### 1.A Appendix to Chapter 1

This is some additional information for the chapter.

## Chapter 2 Features of this Shell

### 2.1 Section Headings

Use the Section tag for major sections, and the Subsection tag for subsections.

#### 2.1.1 Subsection

This is some harmless text under a subsection.

**Subsubsection**

This is some harmless text under a subsubsection.

### 2.2 Tags

You can apply the logical markup tag *Emphasized*.

You can apply the visual markup tags **Bold**, *Italics*, Roman, **Sans Serif**, *Slanted*, **SMALL CAPS**, and *Typewriter*.

You can apply the special, mathematics only, tags **froftur**, **BLACKBOARD BOLD**, and *CALCIGRAP<sup>H</sup>HC*. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

You can apply the size tags tiny, scriptsize, footnotesize, small, normalsize, large, Large, LARGE, **huge** and **Huge**.

5

This is a Body Math paragraph. Each time you press the Enter key, Scientific WorkPlace switches to mathematics mode. This is convenient for carrying out "scratchpad" computations. Following is a group of paragraphs marked as Body Quote. This environment is appropriate for a short quotation or a sequence of short quotations.

The buck stops here. *Harry Truman*  
 Ask not what your country can do for you; ask what you can do for your country.  
*John F. Kennedy*  
 I am not a crook. *Richard Nixon*  
 It's no exaggeration to say the undecideds could go one way or another. *George Bush*

### 2.3 List Environments

You can create numbered, bulleted, and description lists using the tag popup at the bottom left of the screen.

1. List item 1
2. List item 2
  - (a) A list item under a list item.  
 The typeset style for this level is different than the screen style. The screen shows a lower case alphabetic character followed by a period while the typeset style uses a lower case alphabetic character surrounded by parentheses.
  - (b) Just another list item under a list item.
    - i. Third level list item under a list item.
    - (A) Fourth and final level of list items allowed.

- Bullet item 1
- Bullet item 2
  - Second level bullet item.
  - \* Third level bullet item.
  - Fourth (and final) level bullet item.

**Description List** Each description list item has a term followed by the description of that term. Double click the term box to enter the term, or to change it.

**Bunyip** Mythical beast of Australian Aboriginal legends.

### 2.A Appendix to Chapter 2

This is some additional information for the chapter.

## Appendix A The First Appendix

The appendix fragment is used only once. Subsequent appendices can be created using the Section tag.

## Thesis - Harvard Thesis Modified by Philippe Laval

### Document class base file: `sebase.cls`

Options and Packages	Defaults
Document class options	Standard
Packages:	
laval	None

The shell uses a modification of the Style Editor Harvard Thesis typesetting specifications. The front matter is blank, but the body of the document contains title page fields to be completed with the title, name of author, department, degree name, field, university, and thesis date. Additional fields include the abstract, acknowledgments, preface, and contents.

The shell adds blank pages where necessary to ensure that new chapters begin on an odd-numbered page. Blank pages carry headers with page numbers, but are not shown here.

### Abstract

Put the abstract here. The abstract must have a (1) statement of the problem, (2) an exposition of methods and procedures, and (3) a summary of the findings. The length may not exceed 350 words.

### Acknowledgments

The acknowledgment is the place to thank the faculty, staff, family, and friends who have assisted you in preparing your thesis or dissertation. You may also acknowledge any support or special research materials given you.

Copyright permissions may also be acknowledged here by stating that: (1) permission has been granted for reproduction of tables, tests, and other copyright protected items and (2) gives the source of the permission.

Use a Preface rather than Acknowledgments when the research is discussed, for example, "the motivation for the study, the background of the project, the scope of the research, and the purpose of the paper" (Turabian, 1996, p. 7-8).

### Preface

This is the preface and it is created using a TeX field in a paragraph by itself. When the document is loaded, this appears in the edit window like a normal chapter, but it is actually an unnumbered chapter. The TeX field at the beginning of this paragraph sets the correct page heading for the Preface portion of the document. The preface does not appear in the table of contents.

## Chapter 1 Sample Mathematics and Text

### 1.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1.1}$$

is displayed and automatically numbered as equation 1.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ .

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

<sup>1</sup> L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

### 1.2 Mathematics in Section Heads $\int_{\alpha}^{\beta} \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

### 1.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1.1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right), \tag{1.2}$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_{\varepsilon} = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), z \in \Gamma_{\varepsilon}. \tag{1.3}$$

**Proof** Change  $z$  for  $1/z$ . Then  $\Gamma_{\varepsilon} = \overline{\Gamma}_{\varepsilon} = \{z \in \mathbb{C}_+ : \overline{z} \in \Gamma_{\varepsilon}\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{1.4}$$

Fix  $z \in \overline{\Gamma}_{\varepsilon}$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_+ : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (1.4) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{1.5}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

■

**Corollary 1.1** Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_{\varepsilon/2}$ , and hence by the Cauchy theorem (1.5) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_{\varepsilon/2},$$

that implies (1.3) by substituting  $1/z$  back for  $z$ .

### 1.A Appendix to Chapter 1

This is some additional information for the chapter.

## Chapter 2 Features of this Shell

### 2.1 Section Headings

Use the Section tag for major sections, and the Subsection tag for subsections.

#### 2.1.1 Subsection

This is some harmless text under a subsection.

#### Subsubsection

This is some harmless text under a subsubsection.

### 2.2 Tags

You can apply the logical markup tag *Emphasized*.

You can apply the visual markup tags **Bold**, *Italics*, Roman, Sans Serif, *Slanted*, SMALL CAPS, and Typewriter.

You can apply the special, mathematics only, tags `fraktur`, `BLACKBOARD BOLD`, and `CALIGRAPHIC`. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

6

You can apply the size tags `tiny`, `xsmall`, `small`, `normalsize`, `large`, `Large`, `LARGE`, `huge` and `Huge`.

This is a Body Math paragraph. Each time you press the Enter key, Scientific Workplace switches to mathematics mode. This is convenient for carrying out “scratchpad” computations. Following is a group of paragraphs marked as Body Quote. This environment is appropriate for a short quotation or a sequence of short quotations.

The buck stops here. *Harry Truman*  
 Ask not what your country can do for you; ask what you can do for your country. *John F Kennedy*  
 I am not a crook. *Richard Nixon*  
 It's no exaggeration to say the undecideds could go one way or another. *George Bush*

### 2.3 List Environments

You can create numbered, bulleted, and description lists using the tag `popup` at the bottom left of the screen.

1. List item 1
2. List item 2
  - (a) A list item under a list item.

The typeset style for this level is different than the screen style. The screen shows a lower case alphabetic character followed by a period while

7

the typeset style uses a lower case alphabetic character surrounded by parentheses.

- (b) Just another list item under a list item.
  - i. Third level list item under a list item.
    - (A) Fourth and final level of list items allowed.
- Bullet item 1
- Bullet item 2
  - \* Second level bullet item.
    - ▶ Third level bullet item.
      - Fourth (and final) level bullet item.

**Description List** Each description list item has a term followed by the description of that term. Double click the term box to enter the term, or to change it.

**Bunyip** Mythical beast of Australian Aboriginal legends.

### 2.A Appendix to Chapter 2

This is some additional information for the chapter.

**Abstract**

This shell document was created from a doctoral dissertation that was successfully submitted to the Department of Mechanical Engineering at Louisiana State University. Replace this text with the text for your abstract.

**Chapter 1 Sample Mathematics and Text**

**1.1 In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1.1}$$

is displayed and automatically numbered as equation 1.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^4 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  (?).

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2 Mathematics in Section Heads  $\int_0^2 \ln t dt$**

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

<sup>1</sup> L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

1.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

Lemma Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right), \tag{1.2}$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{1.3}$$

Proof Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \overline{\Gamma}_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{1.4}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (1.4) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{1.5}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Corollary Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (1.5) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon/2,$$

that implies (1.3) by substituting  $1/z$  back for  $z$ .

Chapter 2 Features of this Shell

## Thesis #1

### Document class base file: `sebase.cls`

Options and Packages	Defaults
Document class options	Standard
Packages:	
<code>sethes1</code>	None

The front matter is blank, but the body of the document contains title page fields to be completed with the title, name of author, dissertation requirements, degree name, major and minor subjects, university, location, thesis date, and copyright information. Additional fields include the names of the committee chair and members, a dedication, acknowledgments, vita, date, and abstract.

The shell adds blank pages where necessary to ensure that new chapters begin on an odd-numbered page. Blank pages carry headers with page numbers, but are not shown here.

ABSTRACT

The Study of Scientific Word on TeX and LaTeX Users

BY

Ron Ausbrooks

Master of Arts

New Mexico State University  
Las Cruces, New Mexico

We study the effects of warm water on the local penguin population. The major finding is that it is extremely difficult to induce penguins to drink warm water. The success factor is approximately  $-e^{-10} - 1$ . Replace this text with your own abstract.

Chapter 1  
Opening the Document Shell

The shell for this document opens showing front matter information in fields in the body of the document. These fields include thesis title, author, requirements, degree name, major and minor subjects, university, thesis date, and copyright information. Additional fields include the dissertation name and the names of the committee chair and committee members.

Chapter 2  
In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation 
$$\sum_{i=1}^{\infty} a_i \tag{1}$$
 is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{n-1} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $x_n = \sum_{k=0}^{n-1} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [1].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays<sup>1</sup>. The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:  $x^2 + y^2 = z^2$

and a short line below.

A long line above may depend on your margins  $\sin^2 \theta + \cos^2 \theta = 1$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

2.1 Mathematics in Section Heads  $\int_0^1 \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

<sup>1</sup> L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

Chapter 3  
Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then  $a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z)$ ,  $z \rightarrow \infty$ ,  $z \in \Gamma_\varepsilon$ . (2)

Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$  and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{n=0}^{\infty} a_n \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^{-n} d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$|R(z)| \leq r^{-1} \max_{\lambda \in C_r(z)} |f(\lambda)| = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) = \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|).$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon,$$

that implies (2) by substituting  $1/z$  back for  $z$ .

## Chapter 4 Features of this Shell

### 4.1 Section Headings

Use the Section tag for major sections, and the Subsection tag for subsections.

#### 4.1.1 Subsection

This is some harmless text under a subsection.

##### 4.1.1.1 Subsubsection

This is some harmless text under a subsubsection.

**Subsubsubsection** This is some harmless text under a subsubsubsection.  
(Subsubsubsection head) Subsubsubsubsection.  
This is some harmless text under a subsubsubsubsection.

### 4.2 Tags

You can apply the logical markup tag *Emphasized*.  
You can apply the visual markup tags **Bold**, *Italic*, **Roman**, **Sans Serif**, *Slanted*, **SMALL CAPS**, and **Typewriter**.  
You can apply the special, mathematics only, tags **fretbur**, **BLACKBOARD BOLD**, and **CALZIGR**, **APKEC**. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.  
You can apply the size tags *xx-small*, *x-small*, *small*, *normalsize*, *large*, *Large*, *LARGE*, **huge** and **Huge**.  
This is a Body Math paragraph. Each time you press the Enter key, Scientific WorkPlace switches to mathematics mode. This is convenient for carrying out "scratchpad" computations. Following is a group of paragraphs marked as Body Quote. This comment is appropriate for a short quotation or a sequence of short quotations.

The buck stops here. *Harry Truman*  
Ask not what your country can do for you; ask what you can do for your country. *John F. Kennedy*  
I am not a crook. *Richard Nixon*  
It's no exaggeration to say the undecideds could go one way or another. *George Bush*

### 4.3 List Environments

You can create numbered, bulleted, and description lists using the tag popup at the bottom left of the screen.

11

- (1) List item 1
- (2) List item 2
  - (a) A list item under a list item.  
The typeset style for this level is different than the screen style. The screen shows a lower case alphabetic character followed by a period while the typeset style uses a lower case alphabetic character surrounded by parentheses.
  - (b) Just another list item under a list item.
    - (i) Third level list item under a list item.

# 9 Thesis Shells

Thesis formatting requirements differ from university to university. The thesis shells included with the program reflect the requirements in effect at the time the shell was designed. Please review the requirements at your university to ensure that the shell you choose is appropriate for your thesis.

The thesis shells are based on the typesetting specifications set in one of two base document classes—`book.cls` or `report.cls`. The program uses several other `.cls` files for customized shells.

See page 2 for information about base document class defaults and for page layout diagrams for the base document classes.

## Air Force Institute of Technology

### Document class base file: `afthesis.cls`

Options and Packages      Defaults

Document class options    Body text 11 pt

Packages:

None

The extensive front matter includes fields for title, author, address, rank, military designator, previous degrees, current degree, school, committee members, number by chapter, flyleaf, disclaimer page, title page, approval page, and abstract. The front matter also includes two fields which should be removed if not used: list of symbols and list of abbreviations. The shell document describes the use of these two fields.

The shell provides the option to number pages, figures, tables, and equations by chapter. It doesn't number sections. The shell also provides the option to underline in place of italics, and it adds a vita page at the end of the thesis.

A TALE OF GNUS, GNATS AND ARMADILLOS

*I. Sample Mathematics and Text*

*1.1 In-line and Displayed Mathematics*

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1.1}$$

is displayed and automatically numbered as equation 1.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a non-expansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ .

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margin.

---

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

1-1

1.2 Mathematics in Section Heads  $\int_0^3 \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

1.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \in \Gamma_\varepsilon. \tag{1.2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{1.3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon/2$ . It follows from (1.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{1.4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (1.4) implies

II. Features Unique to This Shell

2.1 Typesetting Features

**2.1.1 Number by Chapter.** If `\numberbychapter` is added to the document preamble, then pages, figures, tables and equations will all be numbered by chapter.

**2.1.2 No Section Numbers.** If `\nosectionnumbers` is added to the document preamble, then section numbers are not used in the text and in the table of contents.

**2.1.3 Underline Option.** If `\underlineoption` is added to the document preamble, then underlining is used instead of italics for emphasized text, including chapter, section, etc. headings

**2.1.4 List of Symbols.** Remove the List of Symbols tag from the front matter if you are not using this document feature. To place symbols in the list use the command `\symbol{#1}{#2}` inside of an encapsulated TeX field where #2 is the symbol and #1 is the definition to be put in the list of symbols. The symbol is also automatically put in your text. Leave out [#1] if you don't want a definition. For example, He is the symbol for Helium and Au inserts another symbol in the body of the document, without adding a definition to the List of Symbols. **NOTE:** The `\symbol` macro must be encapsulated since the typesetting style used by this document defines this macro as a replacement for the `\symbol` macro already defined by `BI\X`.

**2.1.5 List of Abbreviations.** Remove the List of Abbreviations tag from the front matter if you are not using this document feature. To place abbreviations in the list use the command `\abbreviation{#1}{#2}` inside a TeX field where #2 is the abbreviation and #1 is the definition to be put in the list of abbreviations. The abbreviation is also automatically put in your text. Leave out [#1] if you don't want a definition. For example, Win2k is sometimes used as an abbreviation for Windows 2000.

Appendix A. First appendix title

A.1 In an appendix

This is appendix section A.1. The appendix fragment is used only once. Subsequent appendices can be created using the Chapter Section/Body Tag.

A.2 Sample Citations and Bibliography

BibTeX has been selected for the bibliography choice in this shell document. The BibTeX bibliography style was designed to accompany the typesetting style used by this document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the TeXbook (?), the LaTeX reference book (?), and to a well known grammar book (?). The bibliography section for these citations comes next.

SUMMARY

We study the effects of warm water on the local penguin population. The major finding is that it is extremely difficult to induce penguins to drink warm water. The success factor is approximately  $-e^{-10} - 1$ . Replace this text with your own abstract.

CHAPTER I

INTRODUCTION

Every dissertation should have an introduction. You might not realize it, but the introduction should introduce the concepts, background, and goals of the dissertation.

CHAPTER II

SAMPLE MATHEMATICS AND TEXT

2.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1}$$

is displayed and automatically numbered as equation 1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a non-expansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^+ \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ .

Two sets of  $\LaTeX$  parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

2.2 Mathematics in Section Heads  $\int_0^1 \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

<sup>1</sup> $\LaTeX$  automatically selects the spacing depending on the surrounding line lengths.

2.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} \frac{a_m}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon$ , and hence by the Cauchy theorem (4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon/2,$$

that implies (2) by substituting  $1/z$  back for  $z$ . ■

**CHAPTER III**

**SOME ANCILLARY STUFF**

Ancillary material should be put in appendices, which appear just before the bibliography.

Create your BibTeX bibliography by adding a BibTeX field using your BibTeX database and the `gatech-thesis` BibTeX bibliography style. Compile the document and create the bibliography using the usual methods. Then, delete the BibTeX field from your document and compile again. The `\references` TeX field that follows will include the bibliography in the typeset document and also include a listing for the references in the table of contents.

3

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**1.2. Mathematics in Section Heads**  $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**1.3. Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1.** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

4

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$(1.2) \quad a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \in \Gamma_\varepsilon.$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \arg z \in \pi + \varepsilon\}$  and

$$(1.3) \quad f(1/z) = a_0 + a_1 z + o(z).$$

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (1.3) that

$$(1.4) \quad \frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z),$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_\varepsilon$ , and hence by the Cauchy theorem (1.4) implies

CHAPTER 1

SAMPLE MATHEMATICS AND TEXT

1.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1.1}$$

is displayed and automatically numbered as equation 1.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^+ \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [?].

Two sets of  $\text{\LaTeX}$  parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

<sup>1</sup> $\text{\LaTeX}$  automatically selects the spacing depending on the surrounding line lengths.

1

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

1.2 Mathematics in Section Heads  $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

1.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{1.2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \bar{\varepsilon} \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{1.3}$$

2

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (1.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 \frac{a_m}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{1.4}$$

where  $\varepsilon$  for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_{\varepsilon/2}$ , and hence by the Cauchy theorem (1.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \bar{\Gamma}_{\varepsilon/2},$$

that implies (1.2) by substituting  $1/z$  back for  $z$ . ■

CHAPTER 2

FEATURES OF THIS SHELL

2.1 Section Headings

Use the `Section` tag for major sections, and the `Subsection` tag for subsections.

2.1.1 Subsection

This is some harmless text under a subsection.

2.1.1.1 Subsubsection

This is some harmless text under a subsubsection.

Subsubsubsection This is some harmless text under a subsubsubsection.

Subsubsubsubsection This is some harmless text under a subsubsubsubsection.

2.2 Tags

You can apply the logical markup tag *Emphasized*.

You can apply the visual markup tags **Bold**, *Italics*, Roman, Sans Serif, *Slanted*, SMALL CAPS, and **Typewriter**.

4

Ask not what your country can do for you; ask what you can do for your country. *John F Kennedy*

I am not a crook. *Richard Nixon*

It's no exaggeration to say the undecideds could go one way or another. *George Bush*

2.3 List Environments

You can create numbered, bulleted, and description lists using the tag popup at the bottom left of the screen.

1. List item 1
2. List item 2
  - (a) A list item under a list item.
 

The typeset style for this level is different than the screen style. The screen shows a lower case alphabetic character followed by a period while the typeset style uses a lower case alphabetic character surrounded by parentheses.
  - (b) Just another list item under a list item.
    - i. Third level list item under a list item.
      - A. Fourth and final level of list items allowed.

6

APPENDICES

A. THE APPENDIX

This is the appendix. Use the section division for the title of each appendix.

B. ANOTHER APPENDIX

This is another appendix.

We study the effects of warm water on the local penguin population. The major finding is that it is extremely difficult to induce penguins to drink warm water. The success factor is approximately  $-e^{-\alpha} - 1$ . Replace this text with your own abstract.

## Chapter 1

### Sample Mathematics and Text

#### 1.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1.1}$$

is displayed and automatically numbered as equation 1.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^+ \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [?].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

<sup>1</sup> L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

1

2

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

### 1.2 Mathematics in Section Heads $\int_{\alpha}^{\beta} \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

### 1.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

*for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then*

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, \quad z \in \Gamma_\varepsilon. \tag{1.2}$$

3

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{1.3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (1.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{1.4}$$

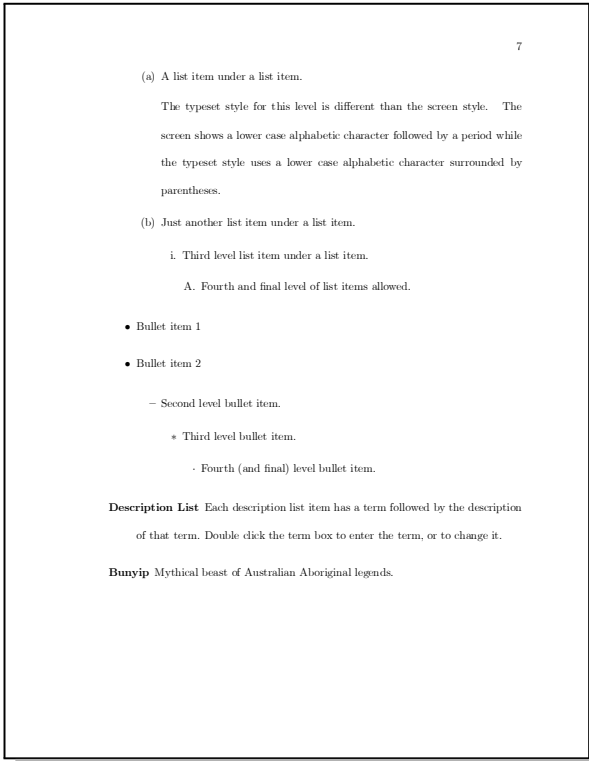

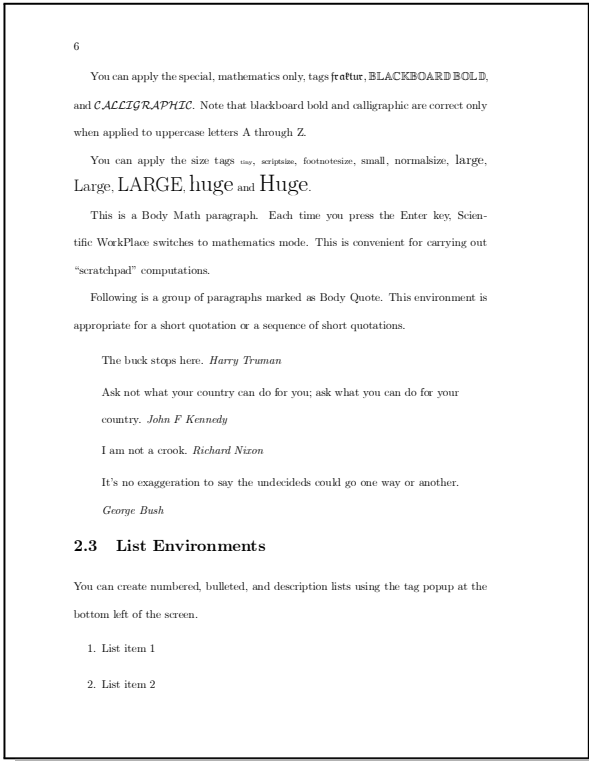

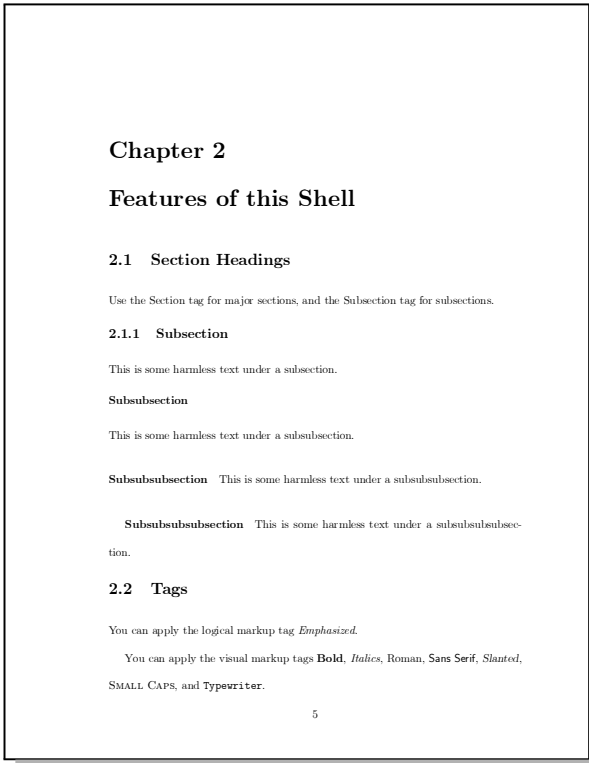

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (1.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, \quad z \in \overline{\Gamma}_\varepsilon/2,$$

that implies (1.2) by substituting  $1/z$  back for  $z$ . ■

ACKNOWLEDGMENTS

The acknowledgment is the place to thank the faculty, staff, family, and friends who have assisted you in preparing your thesis or dissertation. You may also acknowledge any financial support or special research materials given you. Copyright permissions may also be acknowledged here by stating that: (1) permission has been granted for reproduction of tables, tests, and other copyright protected items and (2) gives the source of the permission. Use a Preface rather than Acknowledgments when the research is discussed, for example, "the motivation for the study, the background of the project, the scope of the research, and the purpose of the paper" (Turalian, 1996, p. 7-8).

CHAPTER 1  
Sample Mathematics and Text

1.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1.1}$$

is displayed and automatically numbered as equation 1.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^+ \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [?].

Two sets of  $\LaTeX$  parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

<sup>1</sup>  $\LaTeX$  automatically selects the spacing depending on the surrounding line lengths.

2

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

1.2 Mathematics in Section Heads  $\int^2 \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

1.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, \quad z \in \Gamma_\varepsilon. \tag{1.2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{1.3}$$

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (1.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 \frac{a_m}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{1.4}$$

3

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_{\varepsilon/2}$ , and hence by the Cauchy theorem (1.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, \quad z \in \bar{\Gamma}_{\varepsilon/2},$$

that implies (1.2) by substituting  $1/z$  back for  $z$ . ■

CHAPTER 2  
Features of this Shell

2.1 Section Headings

Use the Section tag for major sections, and the Subsection tag for subsections.

2.1.1 Subsection This is some harmless text under a subsection.

Subsubsection This is some harmless text under a subsection.

Subsubsubsection This is some harmless text under a subsubsubsection.

Subsubsubsubsection This is some harmless text under a subsubsubsubsection.

2.2 Tags

You can apply the logical markup tag Emphasized.

You can apply the visual markup tags **Bold**, *Italics*, Roman, Sans Serif, *Slanted*, SMALL CAPS, and **Typewriter**.

You can apply the special, mathematics only, tags `fettur`, **BLACKBOARD BOLD**, and *CALLIGRAPHIC*. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

You can apply the size tags `sm`, `scriptae`, `footnotesize`, `small`, `normalsize`, `large`, `Large`, `LARGE`, `huge` and `Huge`.

Text Tags	Mathematics Tags	Size Tags
Bold	Fraktur	tiny
Italics	Blackboard Bold	scriptsize
Roman	Calligraphic	footnotesize
Sans Serif		small
Slanted		large
Small Caps		large
Typewriter		huge
		Huge

Table 2.1: Available tags

This is a Body Math paragraph. Each time you press the Enter key, Scientific Workplace switches to mathematics mode. This is convenient for carrying out "scratchpad" computations.

Following is a group of paragraphs marked as Body Quote. This environment is appropriate for a short quotation or a sequence of short quotations.

The luck stops here. Harry Truman  
 Ask not what your country can do for you; ask what you can do for your country. John F. Kennedy  
 I am not a crook. Richard Nixon  
 It's no exaggeration to say the undecideds could go one way or another. George Bush

### 2.3 List Environments

You can create numbered, bulleted, and description lists using the tag popup at the bottom left of the screen.

### A. The First Appendix

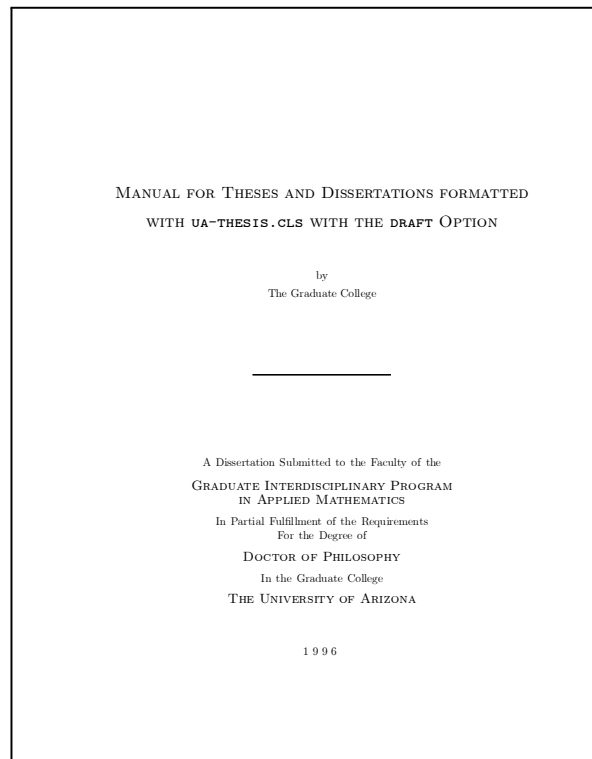

The appendix fragment is used only once. Subsequent appendices can be created using the Section tag.

ABSTRACT

This example dissertation contains the original text of the "Manual for Theses and Dissertations", written by the Graduate College at the University of Arizona. It has been obtained via the internet at  
<http://grad.admin.arizona.edu/degreescert/ThesisManual/manual.htm>  
 on May 10, 1996. The page was last updated November 9, 1995. No guarantee is made that this information is current, and students should check with the Graduate College before submitting a dissertation or thesis.

6

ACKNOWLEDGMENTS

The contents of this example dissertation has been entirely written by the Graduate College at the University of Arizona.

7

Chapter 1  
INTRODUCTION

Use this manual as a guide for setting up the physical format of your thesis, dissertation or document. Your thesis will represent you, your department, and The University of Arizona in the international scholarly community. Your work is important and worthy of professional presentation. This manual lists Graduate College requirements for the mechanical aspects of meeting these high standards.

In this manual the word thesis, includes documents and dissertations. If format requirements for the document or dissertation vary from those for the thesis, specific requirements for each type of paper will be listed.

Two final copies of the thesis must be submitted; both must meet all specifications of this manual. The two final copies should be submitted unbound in a box to the Graduate College Degree Certification Office.

8

Chapter 2  
UNIVERSITY MICROFILMS INCORPORATED (UMI)

Your thesis will be published by University Microfilms Incorporated, Ann Arbor, Michigan. Upon certification by your major professor, your examining committee, and the Graduate College, a copy of the thesis and a Special Abstract are forwarded to UMI. The manuscript is cataloged and microfilmed, the microfilm negative is inspected and put in vault storage. Paper copies of your work will be produced on demand by UMI. Catalog information is sent to the Library of Congress for production and distribution of catalog cards for libraries. The original copy of the thesis is returned to The University of Arizona Library. The Special Abstract is printed in Microfilm Abstracts and distributed to leading libraries in the United States and abroad and to a selected list of journals and abstracting services.

Publication by UMI does not preclude publication by other means later. You are urged to submit your work for publication in a scholarly or professional journal. Suitable acknowledgment must indicate that the publication is a thesis, dissertation, or document, or portion thereof, which was submitted in partial fulfillment of the requirements for a degree at the University of Arizona.

You must complete a UMI publication agreement, available through the Degree Certification Office.

9

Chapter 3  
SAMPLE MATHEMATICS AND TEXT

**3.1 In-line and Displayed Mathematics**

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{3.1}$$

is displayed and automatically numbered as equation 3.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [?].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

**3.2 Mathematics in Section Heads**  $\int_0^{\beta} \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

**3.3 Theorems, Lemmata, and Other Theorem-like Environments**

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

10

**Lemma 1.** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{3.2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \leq \arg z \leq \pi + \varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{3.3}$$

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (3.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} \frac{a_m}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{3.4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (3.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \bar{\Gamma}_\varepsilon/2,$$

that implies (3.2) by substituting  $1/z$  back for  $z$ . □

11

Chapter 4  
GENERAL FORMAT REQUIREMENTS

**4.1 Margins**

Text, illustrations (figures) or tables must not appear outside the specified margins. Specific margin requirements are listed in ORDER OF SECTIONS under each category. Page numbers are the only item which may appear outside the margin requirements.

**4.2 Corrections on Pages**

Do not use correction fluid or correction tape. These materials flake off in handling and storage, exposing the original errors.

**4.3 Page numbers**

The title page is page 1 of the thesis. All pages which follow are numbered in a single sequence with arabic numerals. Page numbers must be placed at least 1" below the top of the sheet, and 1" from the right edge. The numbers must be at least 1/4" above the first line of text. You may omit the printed page number on the title page; all other pages must have printed page numbers. Do not use page headers. Do not use the phrase, Page xx; just the numeral.

**4.4 Photocopy Quality**

Photocopies must meet all requirements for margins, readability, and type of paper. This includes all photocopied documents, tables, illustrations and appendix pages.

**4.5 Printers**

Laser printing or other letter quality printing is required. Impact, or daisy wheel printing is generally acceptable. 24-pin dot matrix near letter quality and draft quality printing are not acceptable.

**4.6 Type Fonts**

Standard serif typefaces such as Courier and Times Roman reproduce and microfilm well. Do not use modern Sans Serif types, which read well in the original but do not reduce well for microfilming. Ornamental styles such as Script and Old English may

Text Tags	Mathematics Tags	Size Tags
Bold	Fraktur	tiny
Italics	Blackboard Bold	scriptsize
Roman	Calligraphic	footnotesize
Sans Serif		small
Slanted		large
Small Caps		large
Typewriter		Huge

TABLE 4.1. Available tags

not be used. Limit the use of italic styles to standard uses in bibliographic citations and foreign words. Boldface should be restricted to very small segments of the text and to infrequent occurrences. These text tags are available:

**4.6.1 Type Size**

Use 12-point or 14-point for proportional fonts; 10 cpi or 12 cpi for non-proportional fonts. A proportional font allows proportional spacing - a feature that gives a printed page a more pleasing appearance by allowing for different widths of characters. The letter w, for example, is wider than the letter i. Normally, when these letters are printed, both are given the same amount of space; the result can be gaps that are visually distracting. With proportional printing, the letter w is given more space than the letter i, creating a more aesthetic and professional-looking line of text.

**4.6.2 Typewritten Papers**

Papers prepared on good quality electric typewriters are acceptable. All margin, paper quality, and typographic requirements apply. Type size should be Pica (10 cpi) or Elite (12 cpi)

**Appendix A**  
**INCLUSION OF PUBLISHED PAPERS OR MANUSCRIPTS**  
**FOR PUBLICATION**

Under a policy adopted by The University of Arizona Graduate Council in January, 1992, your department may allow published and publishable papers to be included as part of your thesis. The reprints or manuscripts are treated as appendices, and the body of your thesis must include a summary of your contribution and a summary of the research. The Graduate College will accept theses in this format from any unit with an implementation policy on file with the Graduate College Degree Certification Office.

**A.1 Body of Paper**

The ORDER OF SECTIONS applies. In addition, the Body of the Paper must include two chapters as follows:

1. An introduction describing the unique contribution of your work to the field of study. Use the following subsections as appropriate:
  - (a) Explanation of the problem and its context
  - (b) A review of the literature
  - (c) Explanation of thesis format This subsection explains the relationship of the papers included and your contribution to each of the papers; where doctoral research efforts are part of a larger collaborative project, you must be able to identify one aspect of the project as your own and demonstrate an original contribution. Your role in the research and production of the published paper(s) should be clearly specified.
2. A chapter titled PRESENT STUDY which summarizes the methods, results, and conclusions of the research. The chapter should begin with a statement such as:
 

The methods, results, and conclusions of this study are presented in the papers appended to this thesis. The following is a summary of the most important findings in these papers.

**A.2 Appendices**

All mechanical requirements for Appendices listed in the ORDER OF SECTIONS apply. Your appendices will consist of:

1. A reprint of each paper as a separate appendix in the following order:
  - (a) a copy of the title page of the journal in which the article appeared
  - (b) the statement of permission for use of copyrighted material (see Appendix B: Permissions)
  - (c) the reprint(s), copied single-sided onto the required type of paper
2. Supplementary materials such as data tables, graphs, and maps which might ordinarily appear as appendices to a thesis.

These two types of appendices form a single sequence, assigned letters and titled as described in this manual. All Appendix pages are part of the single pagination sequence of the thesis. The page numbers will be typed in as needed.

**Appendix B**  
**PERMISSIONS**

Use of copyrighted material in your thesis, including illustrations, usually requires written permission from the copyright holder. Start this time-consuming process as early as possible. Play it safe and assume that you must obtain permission if the material is copyrighted. Consult your advisor or departmental graduate secretary about this process.

Exceptions, sometimes pertaining to small fractions of a musical score or other document, are governed by the concept of "fair use." Factors weighed in determining "fair use" include: the purpose of the use, whether commercial or non-profit and educational; the nature of the copyrighted work; the amount and substance of the material used in relation to the entire work; and the effect of the use upon the potential market for or value of the copyrighted work. The "fair use" concept is explained in detail in the Chicago Manual of Style. According to the Association of American University Presses, permission is required for quotations which are complete units, for example, an entire poem, letter, book chapter, or an entire map, chart, drawing or other illustration.

Permission to use copyrighted material should be in writing and retained by the author. The release letters should indicate that permission extends to microfilming and publication by University Microfilms Incorporated and that the copyright owners are aware that UMI may sell, on demand, single copies of the thesis, dissertation or document, including the copyrighted materials, for scholarly purposes. UMI requires copies of permission letters to be attached to the publication agreement, and assumes no liability for copyright violations. If permission letters are not supplied, copyrighted materials may not be filmed.

It is polite and good practice to obtain permission to use noncopyrighted material, which may or may not be acknowledged in the text.

For additional information, telephone the Copyright Public Information Office in Washington, D.C. (202) 479-0700, weekdays between 8:30 a.m. and 5:00 p.m. EST or write to the Copyright Office, Library of Congress, Washington D.C. 20559.

## Chapter 2

### Sample Mathematics and Text

#### 2.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{2.1}$$

is displayed and automatically numbered as equation 2.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^+ = 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [?].

Two sets of  $\LaTeX$  parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

<sup>1</sup> $\LaTeX$  automatically selects the spacing depending on the surrounding line lengths.

4

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margin

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margin.

## 2.2 Mathematics in Section Heads $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

## 2.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \quad (2.2)$$

ACKNOWLEDGEMENTS

The acknowledgment is the place to thank the faculty, staff, family, and friends who have assisted you in preparing your thesis or dissertation. You may also acknowledge any financial support or special research materials given you. Copyright permissions may also be acknowledged here by stating that: (1) permission has been granted for reproduction of tables, tests, and other copyright protected items and (2) gives the source of the permission. Use a Preface rather than Acknowledgments when the research is discussed, for example, "the motivation for the study, the background of the project, the scope of the research, and the purpose of the paper" (Turabian, 1996, p. 7-8).

ii

PREFACE

This is the preface and it is created using a TeX field in a paragraph by itself. When the document is loaded, this appears in the edit window like a normal chapter, but it is actually an unnumbered chapter. The TeX field at the beginning of this paragraph sets the correct page heading for the Preface portion of the document. The preface does not appear in the table of contents..

CHAPTER 1

INTRODUCTION

This document is an example of how to format a thesis or dissertation using LaTeX and get results acceptable at The University of Georgia.

LaTeX (with its parent TeX) has two major advantages for academic use. First, to a remarkable degree it makes design decisions automatically. The author supplies only the words of a text, and LaTeX places them on the page in an aesthetic manner, avoiding rivers and awkward breaks. In this respect LaTeX is like a very intelligent typist or typesetter.

Second, LaTeX can typeset complex mathematical formulas such as

$$\sum_{i=1}^{\infty} x^{p+i} = \frac{p+q+r}{s+t+u+v}$$

both displayed (as shown above) and in the text, as in  $\sum_{i=1}^{\infty} x^{p+i} = \frac{p+q+r}{s+t+u+v}$ . This makes TeX and LaTeX indispensable for mathematicians, physicists, and the like.

LaTeX also has built-in formats for other kinds of displayed material such as verse,

Freude, schöne Götterfunken  
Tochter aus Elysium,  
Wir betreten, feuertrunken,  
Himmelsche, dein Heiligtum!

and direct quotations:

1

2

The society that scorns excellence in plumbing, because plumbing is a humble activity, and tolerates shoddiness in philosophy, because philosophy is an exalted activity, will have neither good plumbing nor good philosophy. Neither its pipes nor its theories will hold water.

— John Gardner, *Excellence*

If you wish, quotes and other displayed material can be single spaced; here is an example of how that is achieved:

Yes, I wrote "The Purple Cow."  
I'm sorry now I wrote it.  
But I can tell you anyhow  
I'll kill you if you quote it!

— Anonymous?

Well, maybe it's not as anonymous as it looks. There you have it.<sup>1</sup> Whenever you quote parts of a computer program in English text, they should be set off by using typewriter type.

---

<sup>1</sup>This is a footnote. Notice that footnotes are single spaced even though the text is double spaced.

CHAPTER 2

SAMPLE MATHEMATICS AND TEXT

2.1 IN-LINE AND DISPLAYED MATHEMATICS

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{2.1}$$

is displayed and automatically numbered as equation 2.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^+ \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [?].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

3

2.2 MATHEMATICS IN SECTION HEADS  $\int_0^1 \ln t dt$ 

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

## 2.3 THEOREMS, LEMMATA, AND OTHER THEOREM-LIKE ENVIRONMENTS

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** *Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation*

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, \quad z \in \Gamma_\varepsilon. \quad (2.2)$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \overline{z} \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \quad (2.3)$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (2.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \quad (2.4)$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

## CHAPTER 3

## FEATURES OF THE SHELL

## 3.1 SECTION HEADINGS

Use the Section tag for major sections, and the Subsection tag for subsections.

## 3.1.1 SUBSECTION

This is some harmless text under a subsection.

## SUBSUBSECTION

This is some harmless text under a subsubsection.

Subsubsubsection This is some harmless text under a subsubsubsection.

Subsubsubsubsection This is some harmless text under a subsubsubsubsection.

## 3.2 TAGS

You can apply the logical markup tag *Emphasized*.

You can apply the visual markup tags **Bold**, *Italics*, Roman, **Sans Serif**, *Slanted*, **SMALL CAPS**, and **Typewriter**.

You can apply the special, mathematics only, tags **BLACKBOARD BOLD**, *CALIGRAPHIC*, and **fraktur**. Note that blackboard bold and calligraphic are correct only when applied to uppercase letters A through Z.

## BIBLIOGRAPHY

LaTeX has powerful bibliography-generating tools built in, and you're welcome to use them. If you don't, you should use the "reflist" environment (a U.Ga. specialty) instead, and type your reference list, like this:

Abrahams, P. W.; Berry, K.; and Hargreaves, K. A. (1990) *TeX for the Impatient*. Reading, Mass.: Addison-Wesley.

Knuth, D. E. (1984) *The TeXbook*. Reading, Mass.: Addison-Wesley.

Lamport, L. (1986) *LaTeX: A Document Preparation System*. Reading, Mass.: Addison-Wesley.

## APPENDIX

## SOME MORE THINGS

This is where an appendix could go. To include a single appendix simply place the command `"\appendix"` and then use the `"\chapter*"` command to begin and name your appendix.

If you have more than one appendix, use the command `"\appendices"` and the regular `"\chapter"` command to begin and name each appendix.

### Abstract

We study the effects of warm water on the local penguin population. The major finding is that it is extremely difficult to induce penguins to drink warm water. The success factor is approximately  $-e^{-18} - 1$ . Replace this text with your own abstract.

### Sample Mathematics and Text

#### 1.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1.1}$$

is displayed and automatically numbered as equation 1.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^+ \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ .

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

Chapter 1. Sample Mathematics and Text

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

### 1.2 Mathematics in Section Heads $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

### 1.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{1.2}$$

Chapter 1. Sample Mathematics and Text

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \overline{z} \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{1.3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (1.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{1.4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon$ , and hence by the Cauchy theorem (1.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \overline{\Gamma}_\varepsilon,$$

that implies (1.2) by substituting  $1/z$  back for  $z$ . ■

## Chapter 1

### Introduction

One of the fastest growing areas of computing today is the area of portable, often hand-held, devices. These highly-integrated computers are used in increasingly many areas, especially as Personal Digital Assistants, including hand-held data loggers, bar code scanners and meter readers.

This thesis describes the design of one such portable system, based on the Élan microprocessor. This system features the use of the current state-of-the-art technology, including high-density surface-mounted components, low battery power consumption, and directly integrated support for the new PCMCIA standard.

#### Acknowledgements

The acknowledgment is the place to thank the faculty, staff, family, and friends who have assisted you in preparing your thesis or dissertation. You may also acknowledge any financial support or special research materials given you. Copyright permissions may also be acknowledged here by stating that: (1) permission has been granted for reproduction of tables, tests, and other copyright protected items and (2) gives the source of the permission. Use a Preface rather than Acknowledgments when the research is discussed, for example, "the motivation for the study, the background of the project, the scope of the research, and the purpose of the paper" (Turabian, 1996, p. 7-8).

## Chapter 2

### Applications

#### 2.1 Biomedical Applications

The role of the Élan Portable Computer, the system this thesis describes, in such biomedical systems would be to actually take the place of the hand-held device taking data readings, or as part of the instrumentation modules placed around the home. The requirements of the Élan Portable Computer in such systems are described in the next chapter.

This paragraph is so important that we'll repeat it for emphasis. The role of the Élan Portable Computer, the system this thesis describes, in such biomedical systems would be to actually take the place of the hand-held device taking data readings, or as part of the instrumentation modules placed around the home. The requirements of the Élan Portable Computer in such systems are described in the next chapter.

## Chapter 3

### Alternatives

In Chapter 2, we saw a number of applications in which a portable computer may be used.

The Élan CPU chooses the configuration mode at reset time, on the rising edge of **RESIN**, by sampling the state of three pins: **DTR**, **RTS** and **SOUT**. These pins are usually used for serial port output, except for their special function at reset. To select one of the modes, we place 10kΩ pull-up or pull-down resistors on these pins, as per Table 3.1. In this table, a "1" indicates pull-up, "0" indicates pull-down, and "X" indicates that no resistor is required.

#### 3.0.1 Level 1 ISA Bus Support

Table 3.2 shows the meaning of the pins used in this mode.

Before we continue, a few points to note about the notation:

- A pin name like **PIN** indicates either an *active-high* pin (i.e., where the pin is asserted when it is at a HIGH level, generally either 3.3V or 5V), or a *rising-edge*

Pin state at reset			Mode Selected
DTR	RTS	SOUT	
0	0	X	Internal CGA
1	0	0	Local bus, 1 × clock
1	0	1	Local bus, 2 × clock
X	1	X	Maximum ISA

0 = pull-down resistor (to GND)  
 1 = pull-up resistor (to VCC5)  
 X = no resistor

Table 3.1: Selection of the Élan operating mode

Pin Name	Type <sup>a</sup>	Function
AEN	O	DMA address enable (DMA cycle)
TC	O	DMA terminal count
SYSLK	O	System clock <sup>b</sup>
PIRQ1	I	Programmable interrupt request 1
DRQ2	I	DMA channel 2 request
XIOOUT / BAUDOUT	O	Video clock or serial port clock
MC516	I	Memory device is 16-bit <sup>c</sup>
IOCS16	I	I/O device is 16-bit <sup>c</sup>
SBHE	O	Byte high enable <sup>d</sup>
IRQ14	I	Interrupt request 14 <sup>e</sup>

Table 3.2: ISA bus support, common subset

pin (i.e., where the pin is asserted on the rising edge, from LOW to HIGH, of a pulse).

- A name like  $\overline{\text{PIN}}$  is the opposite: it indicates an *active-low* pin, one that is asserted on the *falling-edge* HIGH to LOW of a signal.
- A name like  $\text{PIN}[3:0]$  is shorthand for pins individually named PIN0, PIN1, PIN2 and PIN3.
- All pins are with reference to the microprocessor, i.e., “Output” means output from the processor to external peripherals.

The following is a description of the pins listed in Table 3.2. Much of this information is from pages 39 to 49 of the *Data Book* [2], although some critical information is not listed in *any* part of the supplied documentation...

These modes are summarised in Table 3.3; see also pages 9–15 of the *Data Book* [2].

3.0.2 Other Remarks

One of the additional features of the internal video controller is that it may be programmed to appear in the I/O location for a CGA controller (3D4h–3DAh) or in the I/O location for a Hercules Graphics Adapter (3B4h–3BFh).

Mode	Description
Full speed	All clocks are at fastest speed and all peripherals are powered up.
Low speed	CPU clock is reduced to a lower speed; all other clocks are at full speed.
Doze	CPU, system and DMA clocks, as well as the high-speed phase-locked loop, are stopped.
Sleep	Additional clocks and peripherals are stopped (depending on the programmed settings), as is the serial port controller (UART).
Suspend	A special BIOS routine is invoked to save the system state, then virtually all of the system is powered down. The phase-locked loops are turned off.
Off	A powered-down mode in which PGP2 and PGP3 are set to a predefined state. Memory refresh is still active. No activity can cause the processor to leave this state, except for a power-on reset.

Table 3.3: Power Management Unit operating modes

Chapter 4

Sample Mathematics and Text

4.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{4.1}$$

is displayed and automatically numbered as equation 4.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a nonexpansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$  [?].

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

4.2 Mathematics in Section Heads  $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

4.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, \quad z \in \Gamma_\varepsilon. \tag{4.2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \overline{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{4.3}$$

Fix  $z \in \overline{\Gamma}_\varepsilon$ , and let  $C_\varepsilon(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (4.3) that

$$\frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^{\infty} a_m \frac{1}{2\pi i} \int_{C_\varepsilon(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{4.4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_\varepsilon(z)} o(|\lambda|) = r^{-1} \max_{\lambda \in C_\varepsilon(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \overline{\Gamma}_\varepsilon$ , and hence by the Cauchy theorem (4.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \quad \text{as } z \rightarrow \infty, \quad z \in \overline{\Gamma}_\varepsilon/2,$$

that implies (4.2) by substituting  $1/z$  back for  $z$ . ■

## Chapter 6

### Conclusions

In conclusion, this project has been very challenging, but very interesting as well. Although we were not able to proceed with the implementation, we are more than reasonably satisfied that the design is sound and thorough. If the project is continued in the next year, the Élan Portable Computer will eventually emerge as a symbol of today's modern computing.

1.0 SAMPLE MATHEMATICS AND TEXT

1.1 IN-LINE AND DISPLAYED MATHEMATICS

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1.1}$$

is displayed and automatically numbered as equation 1.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a non-expansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ .

Two sets of L<sup>A</sup>T<sub>E</sub>X parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above:

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

<sup>1</sup>L<sup>A</sup>T<sub>E</sub>X automatically selects the spacing depending on the surrounding line lengths.

2

1.2 MATHEMATICS IN SECTION HEADS  $\int_0^1 \ln TDT$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

1.3 THEOREMS, LEMMATA, AND OTHER THEOREM-LIKE ENVIRONMENTS

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1.** Let  $f(z)$  be an analytic function in  $C_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in C_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, \quad z \in \Gamma_\varepsilon. \tag{1.2}$$

*Proof.* Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in C_- : \bar{\varepsilon} \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{1.3}$$

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in C_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (1.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z_0)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{1.4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_{\varepsilon/2}$ , and hence by the Cauchy theorem (1.4) implies

3

$\frac{d}{dz}f(1/z) = a_1 + R(z) \rightarrow a_1$ , as  $z \rightarrow \infty$ ,  $z \in \overline{\mathbb{C}}_{\neq 0}$ ,  
 that implies (1.2) by substituting  $1/z$  back for  $z$ . □

Following is a short bibliography. It has no relationship to the previous text, but can be used to show sample citations such as [4] and [6]. This typesetting style places each citation inside square brackets. If you want multiple citations to appear in a single set of square brackets you must type all of the citation keys inside a single citation, separating each with a comma. Here is an example: [2, 3, 4].

Head	Head	Head
entry	entry	entry
entry	entry	entry
entry	entry	entry

Abstract

Thesis Title

by A. U. Thor

Chair of Supervisory Committee:  
Professor Name of Chairperson  
Chair's department

This sample dissertation is an aid to students who are attempting to format their theses with L<sup>A</sup>T<sub>E</sub>X, a sophisticated text formatter widely available at the University of Washington and other institutions of higher learning.

It describes the use of a specialized macro package developed specifically for thesis production at the University. The macros customize L<sup>A</sup>T<sub>E</sub>X for the correct thesis style, allowing the student to concentrate on the substance of his or her text.

It demonstrates the solutions to a variety of formatting challenges found in thesis production.

It serves as a template for a real dissertation.

GLOSSARY

**ARGUMENT:** replacement text which customizes a L<sup>A</sup>T<sub>E</sub>X macro for each particular usage.

**BACK-UP:** a copy of a file to be used when catastrophe strikes the original. People who make no back-ups deserve no sympathy.

**CONTROL SEQUENCE:** the normal form of a command to L<sup>A</sup>T<sub>E</sub>X.

**DELIMITER:** something, often a character, that indicates the beginning and ending of an argument. More generally, a delimiter is a field separator.

**DOCUMENT CLASS:** a file of macros that tailors L<sup>A</sup>T<sub>E</sub>X for a particular document. The macros described by this thesis constitute a document class.

**DOCUMENT OPTION:** a macro or file of macros that further modifies L<sup>A</sup>T<sub>E</sub>X for a particular document. The option `[chapternotes]` constitutes a document option.

**FIGURE:** illustrated material, including graphs, diagrams, drawings and photographs.

**FONT:** a character set (the alphabet plus digits and special symbols) of a particular size and style. A couple of fonts used in this thesis are *twelve point roman* and *twelve point roman slanted*.

**FOOTNOTE:** a note placed at the bottom of a page, end of a chapter, or end of a thesis that comments on or cites a reference for a designated part of the text.

**FORMATTER:** (as opposed to a word-processor) arranges printed material according to instructions embedded in the text. A word-processor, on the other hand, is normally controlled by keyboard strokes that move text about on a display.

iv

ACKNOWLEDGMENTS

Chapter 1

SAMPLE MATHEMATICS AND TEXT

1.1 In-line and Displayed Mathematics

The expression  $\sum_{i=1}^{\infty} a_i$  is in-line mathematics, while the numbered equation

$$\sum_{i=1}^{\infty} a_i \tag{1.1}$$

is displayed and automatically numbered as equation 1.1.

Let  $H$  be a Hilbert space,  $C$  be a closed bounded convex subset of  $H$ ,  $T$  a non-expansive self map of  $C$ . Suppose that as  $n \rightarrow \infty$ ,  $a_{n,k} \rightarrow 0$  for each  $k$ , and  $\gamma_n = \sum_{k=0}^{\infty} (a_{n,k+1} - a_{n,k})^2 \rightarrow 0$ . Then for each  $x$  in  $C$ ,  $A_n x = \sum_{k=0}^{\infty} a_{n,k} T^k x$  converges weakly to a fixed point of  $T$ .

Two sets of  $\text{\LaTeX}$  parameters govern mathematical displays.<sup>1</sup> The spacing above and below a display depends on whether the lines above or below are short or long, as shown in the following examples.

A short line above

$$x^2 + y^2 = z^2$$

and a short line below.

A long line above may depend on your margins

$$\sin^2 \theta + \cos^2 \theta = 1$$

as will a long line below. This line is long enough to illustrate the spacing for mathematical displays, regardless of the margins.

<sup>1</sup> $\text{\LaTeX}$  automatically selects the spacing depending on the surrounding line lengths.

1.2 Mathematics in Section Heads  $\int_a^b \ln t dt$

Mathematics can appear in section heads. Note that mathematics in section heads may cause difficulties in typesetting styles with running headers or table of contents entries.

1.3 Theorems, Lemmata, and Other Theorem-like Environments

A number of theorem-like environments is available. The following lemma is a well-known fact on differentiation of asymptotic expansions of analytic functions.

**Lemma 1** Let  $f(z)$  be an analytic function in  $\mathbb{C}_+$ . If  $f(z)$  admits the representation

$$f(z) = a_0 + \frac{a_1}{z} + o\left(\frac{1}{z}\right),$$

for  $z \rightarrow \infty$  inside a cone  $\Gamma_\varepsilon = \{z \in \mathbb{C}_+ : 0 < \varepsilon \leq \arg z \leq \pi - \varepsilon\}$  then

$$a_1 = -\lim_{z \rightarrow \infty} z^2 f'(z), \quad z \rightarrow \infty, z \in \Gamma_\varepsilon. \tag{1.2}$$

**Proof.** Change  $z$  for  $1/z$ . Then  $\Gamma_\varepsilon \rightarrow \bar{\Gamma}_\varepsilon = \{z \in \mathbb{C}_- : \pi \in \Gamma_\varepsilon\}$  and

$$f(1/z) = a_0 + a_1 z + o(z). \tag{1.3}$$

Fix  $z \in \bar{\Gamma}_\varepsilon$ , and let  $C_r(z) = \{\lambda \in \mathbb{C}_- : |\lambda - z| = r\}$  be a circle with radius  $r = |z| \sin \varepsilon / 2$ . It follows from (1.3) that

$$\frac{1}{2\pi i} \int_{C_r(z)} \frac{f(\lambda) d\lambda}{(\lambda - z)^2} = \sum_{m=0}^1 a_m \frac{1}{2\pi i} \int_{C_r(z)} \frac{(\lambda - z)^m d\lambda}{(\lambda - z)^2} + R(z), \tag{1.4}$$

where for the remainder  $R(z)$  we have

$$\begin{aligned} |R(z)| &\leq r^{-1} \max_{\lambda \in C_r(z)} o(|z|) = r^{-1} \max_{\lambda \in C_r(z)} |\lambda| \cdot O(|z| + r) \\ &= \frac{|z| + r}{r} \cdot O(|z| + r) = \frac{1 + \sin \varepsilon}{\sin \varepsilon} \cdot O(|z|). \end{aligned}$$

Therefore  $R(z) \rightarrow 0$  as  $z \rightarrow \infty$ ,  $z \in \bar{\Gamma}_\varepsilon/2$ , and hence by the Cauchy theorem (1.4) implies

$$\frac{d}{dz} f(1/z) = a_1 + R(z) \rightarrow a_1, \text{ as } z \rightarrow \infty, z \in \bar{\Gamma}_\varepsilon/2,$$

that implies (1.2) by substituting  $1/z$  back for  $z$ . ■

# Part II

## Gallery of $\text{BibT}_{\text{E}}\text{X}$ Bibliography Styles

# 10 Using BibT<sub>E</sub>X with SWP or SW

If the shell for your *SWP* or *SW* document supports bibliographies, you can create automatic bibliographies with BibT<sub>E</sub>X, a public domain program created by Oren Patashnik. BibT<sub>E</sub>X uses the citations you insert into your document to extract bibliographic information from established reference databases. When you compile your document, BibT<sub>E</sub>X generates the bibliography, storing it in a file with the same name as your document but with a `.bb1` extension. When you typeset, L<sup>A</sup>T<sub>E</sub>X includes the `.bb1` file in your document, formatting it and the citations according to the *bibliography style* you have selected.

You must typeset your document to generate a BibT<sub>E</sub>X bibliography and the citations that refer to it. If you don't typeset, the bibliography and citation cross-references aren't generated. The bibliography doesn't appear on the preview screen or in print, and the citations appear in shaded boxes as they do in the document window.

Creating a BibT<sub>E</sub>X bibliography involves several steps:

- Creating or obtaining a BibT<sub>E</sub>X database.
- Specifying a BibT<sub>E</sub>X bibliography.
- Inserting an instruction to include the bibliography file, select the database, and specify the style.
- Creating citations in your document that refer to the entries in the selected database.
- Generating the bibliography.

Detailed instructions for creating a BibT<sub>E</sub>X bibliography appear in the online Help and in *Creating Documents with Scientific WorkPlace and Scientific Word*. Additional information about BibT<sub>E</sub>X is available if you typeset preview the `btxdoc.dvi` and `btxhak.dvi` files in the `TCITeX\doc\BibTeX` subdirectory of your program installation.

## Understanding BibT<sub>E</sub>X Databases

BibT<sub>E</sub>X databases contain information about publications of widely varied types, including articles, books and sets of books, booklets, collections and the articles they contain, manuals, theses, dissertations, proceedings and the papers they contain, technical reports, unpublished work, and other miscellaneous publications. Each publication included in a BibT<sub>E</sub>X database has an optional key and some basic information required by BibT<sub>E</sub>X, as for this article:

```
@ARTICLE{article-minimal,  
  author = {L[eslie] A. Aamport},  
  title = {The Gnats and Gnus Document Preparation Sys-
```

```
tem},
  journal = {\mbox{G-Animal's} Journal},
  year = 1986,
}
```

Entries may also contain some optional information, as shown here:

```
@ARTICLE{article-full,
  author = {L[eslie] A. Aamport},
  title = {The Gnats and Gnus Document Preparation Sys-
tem},
  journal = {\mbox{G-Animal's} Journal},
  year = 1986,
  volume = 41,
  number = 7,
  pages = "73+",
  month = jul,
  note = "This is a full ARTICLE entry",
}
```

The database information is stored in a logical format with no visual formatting information. The bibliography style you choose determines which information to use when you cite the publication and determines how to order, format, and punctuate it in the citation itself and in the reference list of your document.

Although Bib<sub>T</sub>E<sub>X</sub> databases are available from various sources, you can create your own. One tool for creating, manipulating, and managing a bibliographic database is the freely distributed program BibDB. Your program CD includes the Windows version of BibDB in the winBibDB subdirectory, and it is installed if you select the complete installation type when *SWP* or *SW* was installed. The details of using BibDB to create and edit Bib<sub>T</sub>E<sub>X</sub> databases are outside the scope of this document, but more information is available in the winBibDB subdirectory and in many L<sup>A</sup>T<sub>E</sub>X books.

## Understanding Bib<sub>T</sub>E<sub>X</sub> Bibliography Styles

L<sup>A</sup>T<sub>E</sub>X formats Bib<sub>T</sub>E<sub>X</sub> bibliographies and citations according to the bibliography style that you select. Bib<sub>T</sub>E<sub>X</sub> styles are widely available; over 100 are included with *SWP* and *SW*, and others are available from the Comprehensive T<sub>E</sub>X Archive Network (CTAN) at <http://www.ctan.org>. Bib<sub>T</sub>E<sub>X</sub> styles carry the extension *.bst* and are installed in the TCITeX\BibTeX\bst subdirectory and additional subdirectories below this level of your program installation. Although you can change the directory used for Bib<sub>T</sub>E<sub>X</sub> databases and styles, we recommend that you leave the directory locations unchanged.

Most of the bibliography styles provided with *SWP* and *SW* are appropriate for creating bibliographies, reference lists, and citations in books, articles, and other documents. Some styles have special uses, such as for creating bibliographies in HTML documents or creating personal address books. Although many of the styles produce similar results, no two are identical. Many have been designed to meet the editorial requirements of specific journals or publishers. Some require specific packages or document classes. Just as you choose a document shell with care, so too should you choose a bibliography style. Make certain the style you choose produces citations and references

appropriate for your work. If you are unsure of your requirements, we urge you to use one of these standard Bib<sub>T</sub>E<sub>X</sub> styles:

Bib <sub>T</sub> E <sub>X</sub> Style	Format
<code>abbrv.bst</code>	Entries are labeled with numbers and sorted alphabetically, with first names, months, and journal names abbreviated.
<code>alpha.bst</code>	Entries are sorted alphabetically and labeled using an abbreviation of the author's name and the publication date.
<code>plain.bst</code>	Entries are labeled with numbers and sorted alphabetically.
<code>unsrt.bst</code>	Entries are labeled with numbers and appear in the order of first citation.

## Selecting a Bib<sub>T</sub>E<sub>X</sub> Bibliography Style

As noted above, creating a Bib<sub>T</sub>E<sub>X</sub> bibliography for your *SWP* or *SW* document involves several steps, including selecting the bibliography style (`.bst`) file you want to use to format the database information. You initially select the style when you include the `.bb1` file in your document, but you can change the selection at any time.

### ► To select a bibliography style

1. Make sure you have chosen a Bib<sub>T</sub>E<sub>X</sub> bibliography for your document: from the **Typeset** menu, choose **Bibliography Choice**, choose **BibTeX**, and then choose **OK**.
2. If the instruction to include the bibliography, which appears as `[BIBTEX]`, has already been added to the document, place the insertion point to its right and choose **Properties**.  
*or*  
If the instruction has not yet been added, insert it:
  - a. Move the insertion point to the end of the line that is to precede the bibliography and press **ENTER**.
  - b. On the **Typeset Object** toolbar, click the **Bibliography** button  or, from the **Insert** menu, choose **Typeset Object**, and then choose **Bibliography**.
  - c. From the **BibTeX Bibliography** dialog box, select the database files containing the references you want to cite. More than one Bib<sub>T</sub>E<sub>X</sub> database file can be selected.
3. In the **Style** area of the **BibTeX Bibliography** dialog box, select the Bib<sub>T</sub>E<sub>X</sub> style for formatting the references and citations.
4. Choose **OK**.

To help you select a suitable bibliography style, this chapter provides information about many of the bibliography styles included with the program. The chapter indicates how each style formats citations and the corresponding reference list labels and how

it organizes the reference list. For each style, the chapter notes the names of sample databases provided and required programs, L<sup>A</sup>T<sub>E</sub>X packages, or L<sup>A</sup>T<sub>E</sub>X documentclasses, if any. It also includes brief information about the origin and intended use of the style and a sample typeset page showing a paragraph with citations and the corresponding reference list formatted according to the style.

Unless otherwise noted, the sample pages were created with the Standard L<sup>A</sup>T<sub>E</sub>X Article document shell. Therefore, the reference list carries the title *References*. With the Standard L<sup>A</sup>T<sub>E</sub>X Book or Report shells, the reference list carries the title *Bibliography*. Also unless otherwise noted, the pages were created using the sample database `xampl.bib`.

Format of reference list label	[Author, date] [Author and Author date] [Author <i>et al.</i> , date]
Organization of reference list	Alphabetical by author
Format of citation	[Author, date] [Author and Author, date] [Author <i>et al.</i> , date]
Required files	aaai-named.sty
Directory	TCITeX/BibTeX/bst/beebe

---

The style supports short citations (year only) and requires certain redefinitions in the typesetting specifications to work properly.

► **To modify the typesetting specifications for aaai-named.bst**

1. Using an ASCII editor, open a new file and enter the following lines of code:

```

\let\@internalcite\cite
\def\cite{\def\citename##1{##1}\@internalcite}
\def\shortcite{\def\citename##1{\@internalcite}
\def\@biblabel#1{\def\citename##1{##1}{#1}\hfill}

```

2. Save the file in the TCITeX/TeX/LaTeX/TCImisc directory of your program installation using the name aaai-named.sty.
3. Open your document in *SWP* or *SW* and follow the standard procedure to add the package aaai-named.sty to your document.
4. Create the citations and generate the Bib<sub>T</sub>E<sub>X</sub> bibliography.

## Sample Citations and Bibliography

### Example using aaai-named

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [Lincoll, 1977] in a collection, the article [Oaho *et al.*, 1983] in a proceedings, the article [Aamport, 1986], the book [Knuth, 1973c1981], the booklet [Kuvth, 1988], and to the thesis [Phony-Baloney, 1988]. Combined citations like [Lincoll, 1977, Aamport, 1986] may have special appearance. The bibliography section for these citations comes next.

**aabbrv.bst**

---

Format of reference list label	[number]
Organization of reference list	Alphabetical by author
Format of citation	[number]
Required files	LaTeX/contrib/other/BibTeX/apreambl.tex
Directory	TCITeX/BibTeX/bst/abstyles
Sample Bib <sub>T</sub> E <sub>X</sub> Database:	
acompat.bib	Contains compatibility definitions for use with standard styles; does not contain any actual bibliography records.

---

The style is one of the Bib<sub>T</sub>E<sub>X</sub> ‘adaptable’ family of styles derived by Hans-Hermann Bode. The program automatically inputs the file `apreambl.tex` to the document before the bibliography command appears.

The style abbreviates first names, month names, and journal names in the entries. Otherwise, it is the same as `aplain.bst`, which sorts entries alphabetically and labels them with numbers.

### Sample Citations and Bibliography

#### Example using `aabbrv`

Bib<sub>T</sub>E<sub>X</sub> has been selected for the bibliography choice in this shell document. One of the sample Bib<sub>T</sub>E<sub>X</sub> databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [4] in a collection, the article [5] in a proceedings, the article [1], the book [2], the booklet [3], and to the thesis [6]. Combined citations like [4, 1] may have special appearance. The bibliography section for these citations comes next.

## achemso.bst

---

Format of reference list label	[number]
Organization of reference list	In order of first citation
Format of citation	[number]
Directory	TCITeX/BibTeX/bst/achemso

---

The style is provided with the *achemso* package, which produces bibliographies appropriate for use with the American Chemical Society article shell. The style is similar to the L<sup>A</sup>T<sub>E</sub>X standard bibliography style `unsrt.bst`, with bibliography entries appearing in the order of their first citation.

### Sample Citations and Bibliography

#### Example using achemso

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [1] in a collection, the article [2] in a proceedings, the article [3], the book [4], the booklet [5], and to the thesis [6]. Combined citations like [1, 3] may have special appearance. The bibliography section for these citations comes next.

**acm.bst**

---

Format of reference list label	[number]
Organization of reference list	Alphabetical by author
Format of citation	[number]
Directory	TCITeX/BibTeX/bst/base
Sample BibTeX Database:	
pubform.bib	

---

In entries for the *ACM Transactions* bibliography style (24-Jan.-88 version), the author's name appears in small capitals, with the last name followed by initials. Some dates appear in parentheses. Otherwise, the style is similar to `abbrv.bst`, which sorts entries alphabetically and labels them with numbers and which abbreviates first names, month names, and journal names. This BibTeX style is included in the `bst\base` directory of the TrueTeX distribution, but does not appear on CTAN in the directory `biblio/BibTeX/distrib/styls`.

### Sample Citations and Bibliography

#### Example using acm

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [4] in a collection, the article [5] in a proceedings, the article [1], the book [2], the booklet [3], and to the thesis [6]. Combined citations like [4, 1] may have special appearance. The bibliography section for these citations comes next.

**address.bst**

---

Format of reference list label	Name
Organization of reference list	Alphabetical by person
Format of citation	Name
Required files	<i>directory</i> package
Directory	TCITeX/BibTeX/bst/directory
Sample BibTeX Databases:	
business.bib	
family.bib	
test.bib	

---

The style is part of *directory*, a macro package for L<sup>A</sup>T<sub>E</sub>X and BibTeX that facilitates the construction, maintenance, and use of a database that is similar to an address book. You can use the package to construct your own address book; in this way, the package operates like ordinary BibTeX styles except that the reference list it produces contains information about companies, people, and places instead of published articles and books. You can also use the package to include information about companies, people, and places in your document; see *letter.bst* on page 507.

All styles associated with *directory* require the L<sup>A</sup>T<sub>E</sub>X *directory* package, which is available on the program CD in the directory CTAN/biblio/bibtex/contrib/directory. Follow the standard procedure for adding the package to your program installation. Modifications are required to use entries derived from both *directory* operations and standard bibliography operations in the same document. For more information, see the file *directory.tex* in CTAN/biblio/bibtex/contrib/directory on the program CD.

The *directory* styles also require the use of the `\dir{key}` command instead of the `\cite{key}` command. In your document, use TeX fields containing `\dir{key}` commands instead of standard citations, as described below. The styles support a `\nodir{key}` command, which creates an address book with no citations in the text.

The *address.bst* style produces a reference list containing full database information corresponding to the cited keys. It prints the corresponding name at the citation point unless the `\nodir{key}` command is used.

► **To enter a `\dir` command in a TeX field**

1. Place the insertion point where you want the citation to appear.
2. From the Insert menu, choose Typeset Object and then choose TeX Field.
3. In the entry area, type `\dir{key}` where *key* is the key for the database entry you want to cite.
4. Choose OK.

The first sample shown below illustrates an address list created with `\dir{key}` commands in the text. The second sample illustrates an address list created using a `\nodir{*}` command without any preceding text. The sample documents were created with the sample databases *business.bib* and *family.bib*.

## Sample Citations and Bibliography

### Example using address

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. The citations in this sentence have been created with TeX commands that replace standard citations. The list below contains the address for **Knudsoft (RS.2 Computer Room)** and also for **Microknud Corp.** It also contains listings for **Daffy Duck Knudson**, **Bugs Bunny and Pluto** and for **Donald Ernest Knudson**. The phone book for these citations comes next.

#### Knudsoft (RS.2 Computer Room)

## address-html.bst

---

Format of reference list label	Name
Organization of reference list	Alphabetical by person
Format of citation	Name or none
Required files	<i>directory</i> package
Directory	TCITeX/BibTeX/bst/directory
Sample BibTeX Databases:	
	business.bib
	family.bib
	test.bib

---

The style is part of `directory`, a macro package for L<sup>A</sup>T<sub>E</sub>X and BibT<sub>E</sub>X that facilitates the construction, maintenance, and use of a database that is similar to an address book. You can use the package to construct your own address book; in this way, the package operates like ordinary BibT<sub>E</sub>X styles except that the reference list it produces contains information about companies, people, and places instead of published articles and books. You can also use the package to include information about companies, people, and places in your document; see `letter.bst` on page 507.

All styles associated with `directory` require the L<sup>A</sup>T<sub>E</sub>X *directory* package, which is available on the program CD in the directory `CTAN/biblio/bibtex/contrib/directory`. Follow the standard procedure for adding the package to your program installation. Modifications are required to use entries derived from both `directory` operations and standard bibliography operations in the same document. For more information, see the file `directory.tex` in `CTAN/biblio/bibtex/contrib/directory` on the program CD.

The `directory` styles also require the use of the `\dir{key}` command instead of the `\cite{key}` command. In your document, use T<sub>E</sub>X fields containing `\dir{key}` commands instead of standard citations, as described on page 428. The styles support a `\nodir{key}` command, which creates an address book with no citations in the text.

Similar to `address.bst`, `address-html.bst` produces an HTML file for a reference list containing full database information corresponding to the cited keys or to the `\nodir{key}` command. The style supports URL fields within the bibliographic information, so that entries in the list become links to the resources themselves. The resulting HTML file can stand alone or be incorporated into the HTML file for the document containing the citations. The style doesn't produce an automatic heading for the list.

To use the style in *SWP* and *SW*, follow the standard procedure to insert citations in your document and specify and generate a BibT<sub>E</sub>X address list. Then, use the resulting HTML file as it stands or incorporate it into your document, according to the instructions that follow.

### ► To incorporate the HTML bibliography into a document

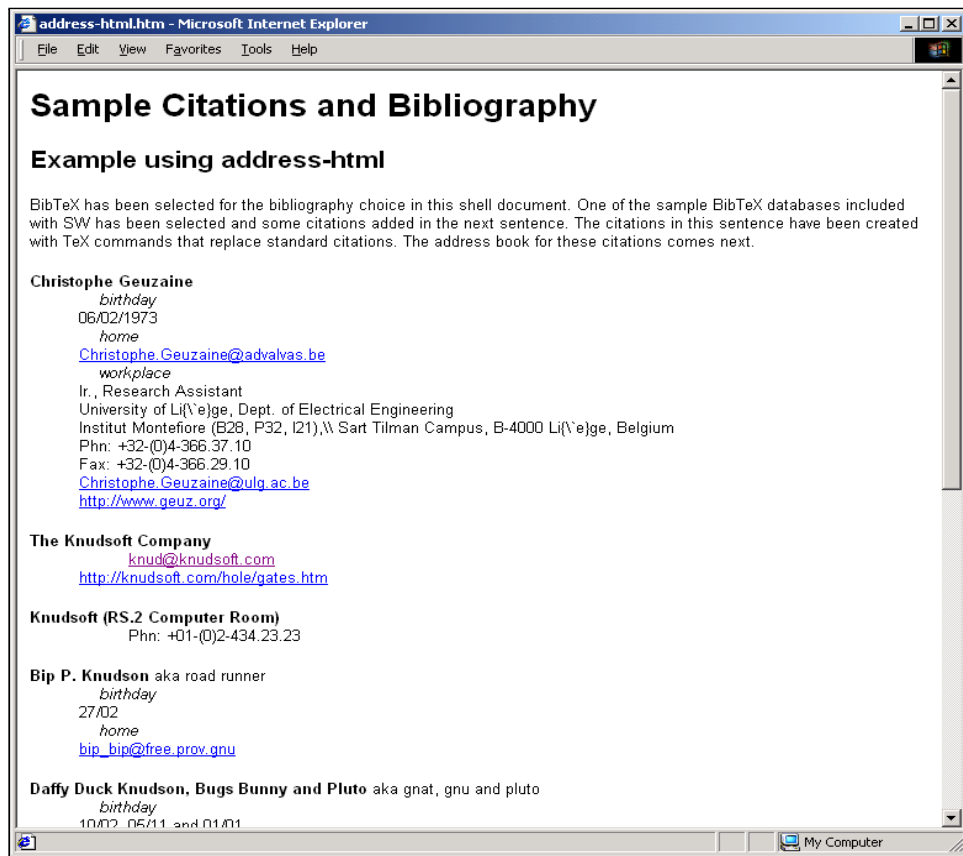

1. Using an ASCII editor, open the `.bbl` file created for your document.
2. Delete the `<HTML>`, `<TITLE>`, and `</HTML>` commands.
3. Copy the contents of the file to the clipboard.
4. Open your document in *SWP* or *SW*.
5. Delete the `[BIBTEX]` instruction.
6. In its place, insert an HTML object:
  - a. From the **Insert** menu, choose **HTML Field**.

- b. Paste the contents of the clipboard into the field.
- c. Choose OK.

## 7. Export the file to HTML:

- a. From the File menu, choose Export Document.
- b. Select the document.
- c. In the Save as type box, choose the HTML format you want.
- d. Choose OK.

The sample .htm file shown here was created in *SWP* according to these instructions. The .tex file includes a `\nodir{*}` command that was deleted after the .htm file was created but before the document was exported to HTML. The sample document was created with the sample databases *business.bib* and *family.bib*.

**adfathesis.bst**

---

This style is designed for theses at the Australian Defence Force Academy. It is a modified version of the style `jphysicsB.bst`, which is provided as part of the harvard family of Bib<sub>T</sub>E<sub>X</sub> bibliography styles. To avoid L<sup>A</sup>T<sub>E</sub>X errors when using the harvard styles, delete the Bib<sub>T</sub>E<sub>X</sub> style files in the `bst\beebe` directory.

### Sample Citations and Bibliography

#### Example using adfathesis

Bib<sub>T</sub>E<sub>X</sub> has been selected for the bibliography choice in this shell document. One of the sample Bib<sub>T</sub>E<sub>X</sub> databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article (Lincoll 1977) in a collection, the article (Oaho *et al.* 1983) in a proceedings, the article (Aamport 1986), the book (Knuth 1981), the booklet (Kivth 1988), and to the thesis (Phouy-Baloney 1988). Combined citations like (Lincoll 1977, Aamport 1986) may have special appearance. The bibliography section for these citations comes next.

#### References

- Aamport L A (1986). The Gnats and Gms Document Preparation System, *G-Animal's Journal* **41**(7), 73+. This is a full ARTICLE entry.

**agsm.bst**

---

Format of reference list label	None
Organization of reference list	Alphabetical by author
Format of citation	(Author date) (Author & Author date) (Author, Author & Author date)
Required files	<i>harvard</i> package
Directory	TCITeX/BibTeX/bst/harvard
Sample Bib <sub>T</sub> E <sub>X</sub> Database:	
harvard.bib	Contains five entries.

---

The `agsm` style is provided as part of the `harvard` family of Bib<sub>T</sub>E<sub>X</sub> bibliography styles, which can also be used with manual bibliographies. The style satisfies the requirements of the *Australian Government Style Manual*. Complete citations are in standard parenthetical form. Incomplete citations can be used as nouns, as in *Medd (1999) claims . . .* or *The key result (Medd) . . .*, or as possessives, as in *Medd's (1999) proof . . .*. To avoid L<sup>A</sup>T<sub>E</sub>X errors when using the `harvard` styles, delete the Bib<sub>T</sub>E<sub>X</sub> style files in the `bst\beebe` directory.

**Sample Citations and Bibliography****Example using agsm**

Bib<sub>T</sub>E<sub>X</sub> has been selected for the bibliography choice in this shell document. One of the sample Bib<sub>T</sub>E<sub>X</sub> databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article (Lincoll 1977) in a collection, the article (Oaho, Ullman & Yannakakis 1983) in a proceedings, the article (Aamport 1986), the book (Knuth 1981), the booklet (Knuth 1988), and to the thesis (Phony-Baloney 1988). Combined citations like (Lincoll 1977; Aamport 1986) may have special appearance. The bibliography section for these citations comes next.

**References**

- Aamport, L. A. (1986). 'The gnats and gnus document preparation system', *G-Animal's Journal* **41**(7), 73+. This is a full ARTICLE entry.
- Knuth, D. E. (1981). *Seminumerical Algorithms*, Vol. 2 of *The Art of Computer Programming*, second edn, Addison-Wesley, Reading, Massachusetts. This is a full BOOK entry.
- Knuth, J. C. (1988). 'The programming of computer art', Vernier Art Center, Stanford, California. This is a full BOOKLET entry.
- Lincoll, D. D. (1977). Semigroups of recurrences, in D. J. Lipcoll, D. H. Lawrie & A. H. Sameh, eds, 'High Speed Computer and Algorithm Organization', third edn, number 23 in 'Fast Computers', Academic Press, New York, part 3, pp. 179-183. This is a full INCOLLECTION entry.
- Oaho, A. V., Ullman, J. D. & Yannakakis, M. (1983). On notions of information transfer in VLSI circuits, in W. V. Oz & M. Yannakakis, eds, 'Proc. Fifteenth Annual ACM Symposium on the Theory of Computing', number 17 in 'All ACM Conferences', The OX Association for Computing Machinery, Academic Press, Boston, pp. 133-139. This is a full INPROCEEDINGS entry.

**alpha.bst**

---

Format of reference list label	[Source label]
Organization of reference list	Alphabetical by author
Format of citation	[Source label]
Directory	TCITeX/BibTeX/bst/base

---

The style uses source labels such as *Knu66*, formed from the author's name and the year of publication. Otherwise, it is the same as `plain.bst`, which sorts entries alphabetically.

### Sample Citations and Bibliography

#### Example using alpha

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [Lin77] in a collection, the article [OUY83] in a proceedings, the article [Aam86], the book [Knu81], the booklet [Kuv88], and to the thesis [PB88]. Combined citations like [Lin77, Aam86] may have special appearance. The bibliography section for these citations comes next.

#### References

**alphahtml.bst**

---

Format of reference list label	[Source label]
Organization of reference list	Alphabetical by author
Format of citation	[authoryear]
Directory	TCITeX/BibTeX/bst/bibhtml
Sample BibT <sub>E</sub> X Database:	
bibrefs.bib	

---

This style creates a reference list appropriate for use on websites. It produces the reference list as an HTML file contained within the commands `<d1>` and `</d1>`. The style supports URL fields within the bibliographic information, so that entries in the bibliography become links to the resources themselves. The resulting HTML file can be incorporated into the HTML file for the document containing the citations. The symbols ~and – remain in the output file, but can be changed with a post-processor to `&nbsp;`; and `&enspace;` or ' ' and ' - ' as required. The style doesn't produce an automatic heading for the list of references.

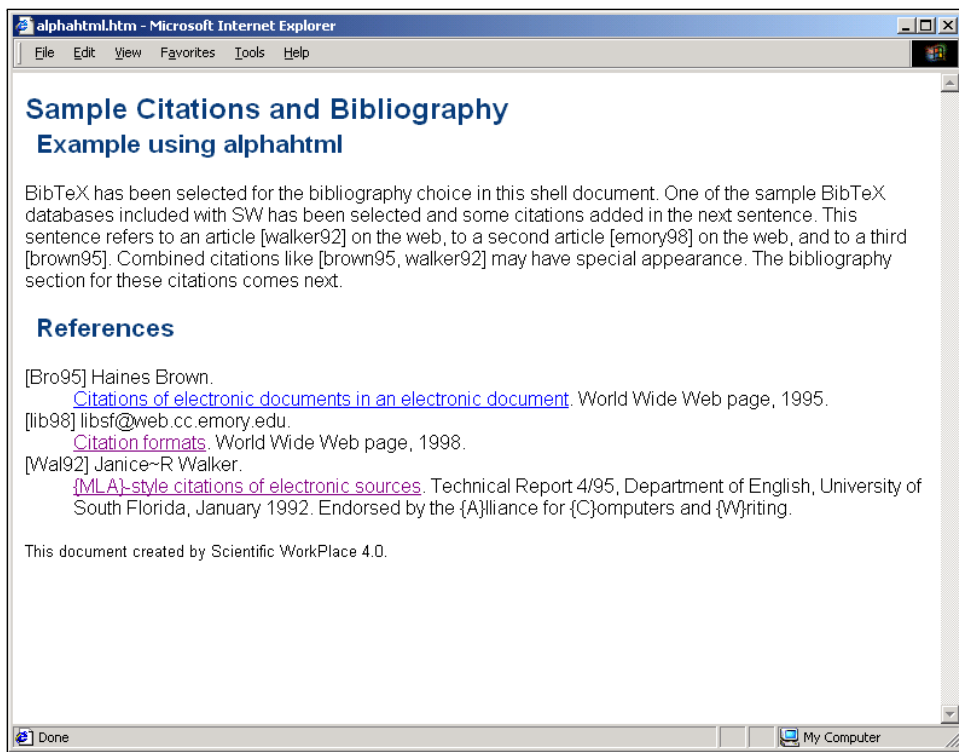

The style is based on `plainhtml.bst` and `alpha.bst`, which creates source labels such as *Knu66*, formed from the author's name and the year of publication. The style sorts entries alphabetically. The styles `alphahtml-date.bst` and `alphahtmldater.bst` are related.

To use the style in *SWP* and *SW*, follow the standard procedure to insert citations in your document and to specify and generate a BibT<sub>E</sub>X bibliography. Then, incorporate the resulting HTML file into your document according to the instructions that follow.

► **To incorporate the HTML bibliography into a document**

1. Using an ASCII editor, open the `.bb1` file created for your document.
2. Copy the contents of the file to the clipboard.
3. Open your document in *SWP* or *SW*.
4. Delete the `[BIBTEX]` instruction.
5. In its place, insert an HTML object:
  - a. From the **Insert** menu, choose **HTML Field**.
  - b. Paste the contents of the clipboard into the field.
  - c. Choose **OK**.
6. Export the file to HTML:
  - a. From the **File** menu, choose **Export Document**.
  - b. Select the document.
  - c. In the **Save as type** box, choose the HTML format you want.
  - d. Choose **OK**.

The sample `.htm` file shown on the next page was created according to these instructions and using a modification of the database file `bibrefs.bib`.

**alphahtmldate.bst**

---

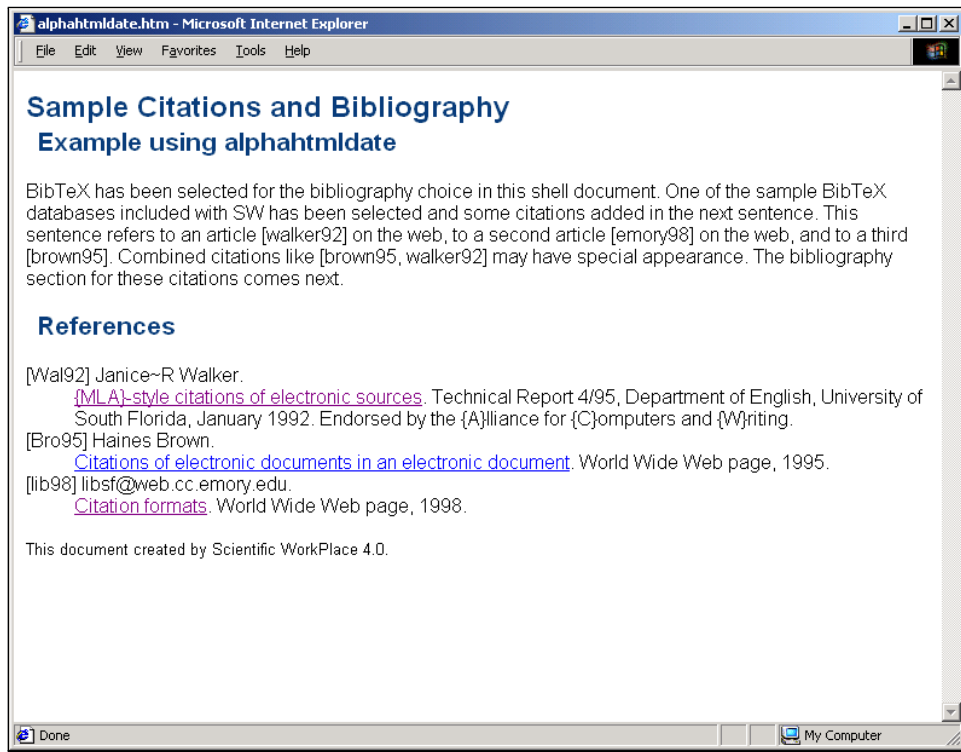

Format of reference list label	[Source label]
Organization of reference list	Chronological order
Format of citation	[authoryear]
Directory	TCITeX/BibTeX/bst/bibhtml
Sample BibTeX Database:	
bibrefs.bib	

---

This style creates a reference list appropriate for use on websites. It produces the reference list as an HTML file contained within the commands `<d1>` and `</d1>`. The style supports URL fields within the bibliographic information, so that entries in the bibliography become links to the resources themselves. The resulting HTML file can be incorporated into the HTML file for the document containing the citations. The symbols `~` and `-` remain in the output file, but can be changed with a post-processor to `&nbsp;`; and `&nbsp;`; or `'` and `'` as required. The style doesn't produce an automatic heading for the list of references.

The style is based on `alphahtml.bst`, which creates source labels such as *Knu66*, formed from the author's name and the year of publication. The style sorts entries chronologically. It is related to `alphahtmldater.bst`.

To use the style in *SWP* and *SW*, follow the standard procedure to insert citations in your document and specify and generate a BibTeX bibliography. Then, incorporate the resulting HTML file into your document as described for `alphahtml.bst` on page 436. The sample `.htm` file below was created according to those instructions and using a modification of the database file `bibrefs.bib`.

**alphahtmldater.bst**

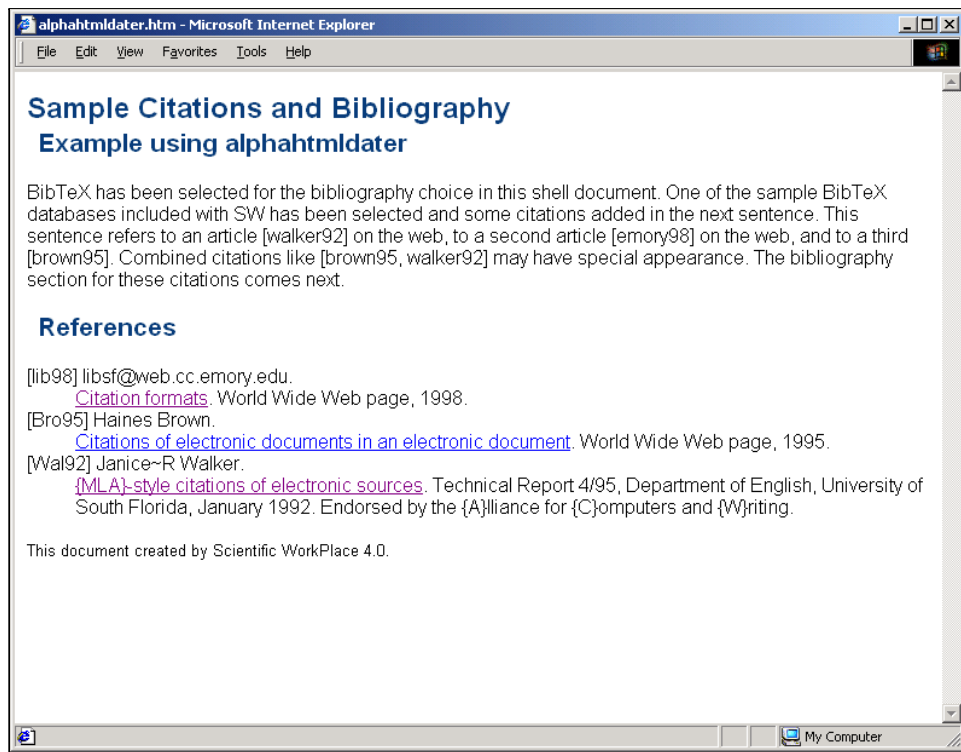

---

Format of reference list label	[Source label]
Organization of reference list	Reverse chronological order
Format of citation	[authoryear]
Directory	TCITeX/BibTeX/bst/bibhtml
Sample BibTeX Database:	
bibrefs.bib	

---

This style creates a reference list appropriate for use on websites. It produces the reference list as an HTML file contained within the commands `<d1>` and `</d1>`. The style supports URL fields within the bibliographic information, so that entries in the bibliography become links to the resources themselves. The resulting HTML file can be incorporated into the HTML file for the document containing the citations. The symbols `~` and `-` remain in the output file, but can be changed with a post-processor to `&nbsp;` and `&nbsp;space;` or `'` and `'` as required. The style doesn't produce an automatic heading for the list of references. The style is based on `alphahtml.bst`, but lists references in reverse chronological order.

To use the style in *SWP* and *SW*, follow the standard procedure to insert citations in your document and to specify and generate a BibTeX bibliography. Then, incorporate the resulting HTML file into your document as described for `alphahtml.bst` on page 436. The sample `.htm` file below was created according to those instructions and using a modification of the database file `bibrefs.bib`.

**amsalpha.bst**

---

Format of reference list label	[Source label]
Organization of reference list	Alphabetical by author
Format of citation	[Source label]
Directory	TCITeX/BibTeX/bst/amslatex
Sample BibT <sub>E</sub> X Database: mrabbrev.bib	Contains 4318 strings

---

A<sub>M</sub>S-L<sub>T</sub>E<sub>X</sub> is a required component of the standard L<sub>T</sub>E<sub>X</sub> distribution. The style constructs source labels such as *Knu66*, from the author's name and the year of publication.

**Sample Citations and Bibliography****Example using amsalpha**

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [Lin77] in a collection, the article [OUY83] in a proceedings, the article [Aam86], the book [Knu81], the booklet [Kuv88], and to the thesis [PB88]. Combined citations like [Lin77, Aam86] may have special appearance. The bibliography section for these citations comes next.

**anotit.bst**

---

Format of reference list label	[number]
Organization of reference list	Alphabetical by author
Format of citation	[number]
Required files	LaTeX/contrib/other/BibTeX/apreambl.tex
Directory	TCITeX/BibTeX/bst/abstyles
Sample Bib <sub>T</sub> E <sub>X</sub> Database:	
acompat.bib	Contains compatibility definitions for use with standard styles; does not contain any actual bibliography records.

---

The style is one of the Bib<sub>T</sub>E<sub>X</sub> ‘adaptable’ family of styles derived by Hans-Hermann Bode. The program automatically inputs the file `apreambl.tex` to the document before the bibliography command appears.

The style excludes the titles of articles. Otherwise, it is the same as `aabbrv.bst`, which abbreviates first names, month names, and journal names in the entries. The style sorts entries alphabetically and labels them with numbers.

### Sample Citations and Bibliography

#### Example using anotit

Bib<sub>T</sub>E<sub>X</sub> has been selected for the bibliography choice in this shell document. One of the sample Bib<sub>T</sub>E<sub>X</sub> databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [4] in a collection, the article [5] in a proceedings, the article [1], the book [2], the booklet [3], and to the thesis [6]. Combined citations like [4, 1] may have special appearance. The bibliography section for these citations comes next.

**apacite.bst**

---

Format of reference list label	None
Organization of reference list	Alphabetical by author
Format of citation	(Author, date) (Author & Author, date) (Author, Author, & Author, date)
Required files	<i>apacite</i> package
Directory	TCITeX/BibTeX/bst/apacite
Sample BibT <sub>E</sub> X Database: testAPA.bib	Contains 54 entries.

---

This BibT<sub>E</sub>X bibliography style for the American Psychological Association must be used with the *apacite* package.

### Sample Citations and Bibliography

#### Example using *apacite*

BibT<sub>E</sub>X has been selected for the bibliography choice in this shell document. One of the sample BibT<sub>E</sub>X databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article (Lincoll, 1977) in a collection, the article (Oaho, Ullman, & Yannakakis, 1983) in a proceedings, the article (Aamport, 1986), the book (Knuth, 1981), the booklet (Kivth, 1988), and to the thesis (Phony-Baloney, 1988). Combined citations like (Lincoll, 1977; Aamport, 1986) may have special appearance. The bibliography section for these citations comes next.

**apalike.bst**

---

Format of reference list label	None
Organization of reference list	Alphabetical by author
Format of citation	[Author, date] [Author and Author, date] [Author et al., date]
Required files	<i>apalike</i> package
Directory	TCITeX/BibTeX/bst/base

---

This standard Bib<sub>T</sub>E<sub>X</sub> style requires the *apalike* package. The style formats bibliography entries alphabetically by author, last name first. Citations in the text can include single and multiple author-date references.

### Sample Citations and Bibliography

#### Example using apalike

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [Lincoll, 1977] in a collection, the article [Oaho et al., 1983] in a proceedings, the article [Aamport, 1986], the book [Knuth, 1981], the booklet [Kuvth, 1988], and to the thesis [Phony-Baloney, 1988]. Combined citations like [Lincoll, 1977, Aamport, 1986] may have special appearance. The bibliography section for these citations comes next.

#### References

**apalike2.bst**

---

Format of reference list label	None
Organization of reference list	Alphabetical by author
Format of citation	(Author, date) (Author & Author, date) (Author et al., date)
Required files	<i>apalike</i> package
Directory	TCITeX/BibTeX/bst/beebe

---

The style is a variant of `apalike.bst`. It requires the *apalike* package. The style formats bibliography entries alphabetically by author. At the beginning of the entry, authors' names are presented last name first. Within the entry, authors' names are presented last name last. Citations in the text can include single and multiple author-date references.

### Sample Citations and Bibliography

#### Example using apalike2

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article (Lincoll, 1977) in a collection, the article (Oaho et al., 1983) in a proceedings, the article (Aamport, 1986), the book (Knuth, 1981), the booklet (Kivth, 1988), and to the thesis (Phony-Baloney, 1988). Combined citations like (Lincoll, 1977; Aamport, 1986) may have special appearance. The bibliography section for these citations comes next.

#### References

**aplain.bst**

---

Format of reference list label	[number]
Organization of reference list	Alphabetical by author
Format of citation	[number]
Required files	LaTeX/contrib/other/BibTeX/apreambl.tex
Directory	TCITeX/BibTeX/bst/abstyles
Sample BibTeX Database:	
acompat.bib	Contains compatibility definitions for use with standard styles; does not contain any actual bibliography records.

---

The style is one of the BibTeX ‘adaptable’ family of styles derived by Hans-Hermann Bode. The program automatically inputs the file `apreambl.tex` to the document before the bibliography command appears. The style is similar to the standard BibTeX style `plain.bst`, which sorts entries alphabetically and labels them with numbers. Authors’ names appear in small capitals in the reference list.

### Sample Citations and Bibliography

#### Example using aplain

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [4] in a collection, the article [5] in a proceedings, the article [1], the book [2], the booklet [3], and to the thesis [6]. Combined citations like [4, 1] may have special appearance. The bibliography section for these citations comes next.

**apsr.bst**

---

Format of reference list label	None
Organization of reference list	Alphabetical by author
Format of citation	(Author date) (Author & Author date) (Author, Author & Author date)
Required files	<i>harvard</i> package
Directory	TCITeX/BibTeX/bst/harvard
Sample BibT <sub>E</sub> X Database:	
harvard.bib	Contains five entries.

---

The bibliography style `apsr.bst` is provided as part of the `harvard` family of BibT<sub>E</sub>X bibliography styles, which can also be used with manual bibliographies. The style is for the *American Political Science Review*. Complete citations are in standard parenthetical form. Incomplete citations can be used as nouns, as in *Medd (1999) claims . . .* or *The key result (Medd) . . .*, or as possessives, as in *Medd's (1999) proof . . .*. To avoid L<sup>A</sup>T<sub>E</sub>X errors when using the `harvard` styles, delete the BibT<sub>E</sub>X style files in the `bst\beebe` directory.

**Sample Citations and Bibliography****Example using apsr**

BibT<sub>E</sub>X has been selected for the bibliography choice in this shell document. One of the sample BibT<sub>E</sub>X databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article (Lincoll 1977) in a collection, the article (Oaho, Ullman & Yannakakis 1983) in a proceedings, the article (Aamport 1986), the book (Knuth 1981), the booklet (Knuth 1988), and to the thesis (Phony-Baloney 1988). Combined citations like (Lincoll 1977, Aamport 1986) may have special appearance. The bibliography section for these citations comes next.

- Phony-Baloney, F. Phidias. 1988. Fighting Fire with Fire: Festooning French Phrases PhD dissertation Funstord University Department of French: . This is a full PHDTHESIS entry.

**asaetr.bst**

---

Format of reference list label	None
Organization of reference list	Alphabetical by author
Format of citation	[number]
Required documentclass	asaetr
Directory	TCITeX/BibTeX/bst/asaetr
Sample BibTeX Database:	
asaetr.bib	Contains two entries.

---

This style supports the bibliography requirements of the *Transactions of the ASAE (American Society for Agricultural Engineers)*. The ASAE Transactions shell document was created with the asaetr document class, a requirement for asaetr.bst.

SAMPLE CITATIONS AND BIBLIOGRAPHY

EXAMPLE USING ASAETR

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [4] in a collection, the article [5] in a proceedings, the article [1], the book [2], the booklet [3], and to the thesis [6]. Combined citations like [4, 1] may have special appearance. The bibliography section for these citations comes next.

**astron.bst**

---

Format of reference list label	None
Organization of reference list	Alphabetical by author
Format of citation	(Author, date) (Author and Author, date) (Author et al., date)
Required files	<b>astron</b> package
Directory	TCITeX/BibTeX/bst/beebe

---

The style is the Bib<sub>T</sub>E<sub>X</sub> bibliography style for astronomical journals. It requires the *astron* package.

**Sample Citations and Bibliography****Example using astron**

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article (Lincoll, 1977) in a collection, the article (Oaho et al., 1983) in a proceedings, the article (Aamport, 1986), the book (Knuth, 1981), the booklet (Knuth, 1988), and to the thesis (Phony-Baloney, 1988). Combined citations like (Lincoll, 1977; Aamport, 1986) may have special appearance. The bibliography section for these citations comes next.

**aunsnot.bst**

---

Format of reference list label	[number]
Organization of reference list	In order of first citation
Format of citation	[number]
Required files	LaTeX/contrib/other/BibTeX/apreambl.tex
Directory	TCITeX/BibTeX/bst/abstyles
Sample BibTeX Database: acompat.bib	Contains compatibility definitions for use with standard styles; does not contain any actual bibliography records.

---

The style is one of the BibTeX ‘adaptable’ family of styles derived by Hans-Hermann Bode. The program automatically inputs the file `apreambl.tex` to the document before the bibliography command appears.

In this style, entries appear in the order of their first citation. Otherwise, the style is the same as the style `anotit.bst`, which excludes the titles of articles and abbreviates first names, month names, and journal names in the entries. Authors’ names appear in small capitals in the reference list.

### Sample Citations and Bibliography

#### Example using aunsnot

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [1] in a collection, the article [2] in a proceedings, the article [3], the book [4], the booklet [5], and to the thesis [6]. Combined citations like [1, 3] may have special appearance. The bibliography section for these citations comes next.

**authordate1.bst**

---

Format of reference list label	None
Organization of reference list	Alphabetical by author
Format of citation	(Author, date) (Author & Author, date) (Author <i>et al.</i> , date)
Required files	<b>authordate1-4</b> package
Directory	TCITeX/BibTeX/bst/beebe

---

This style produces author-date reference lists based loosely on the recommendations of *British Standard 1629* (1976 edition), Butcher's *Copy-editing* (Cambridge University Press, 1981), and the *Chicago Manual of Style* (1982 edition). Uppercase letters in article, journal, and book titles are left as given in the .bib file. The style must be used in conjunction with certain re-definitions of `thebibliography` and `\cite`, which are provided in the required L<sup>A</sup>T<sub>E</sub>X package *authordate1-4*.

**Sample Citations and Bibliography****Example using authordate1**

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article (Lincoll, 1977) in a collection, the article (Oaho *et al.*, 1983) in a proceedings, the article (Aamport, 1986), the book (Knuth, 1981), the booklet (Knuth, 1988), and to the thesis (Phony-Baloney, 1988). Combined citations like (Lincoll, 1977; Aamport, 1986) may have special appearance. The bibliography section for these citations comes next.

**References**

- Aamport, L[eslie] A. 1986. The Gnats and Gnu Document Preparation System. *G-Animal's Journal*, 41(7), 73+. This is a full ARTICLE entry.

Fifteenth Annual ACM Symposium on the Theory of Computing*. All ACM Conferenceth, no. 17. Boston: Academic Press, for The OX Association for Computing Machinery. This is a full INPROCEEDINGS entry.
- Phony-Baloney, F. Phidias. 1988 (June-Aug.). *Fighting Fire with Fire: Festooning French Phrases*. Ph.D Dissertation, Faunford University, Department of French. This is a full PHDTHESIS entry.

**authordate2.bst**

---

Format of reference list label	None
Organization of reference list	Alphabetical by author
Format of citation	(Author, date) (Author & Author, date) (Author <i>et al.</i> , date)
Required files	<b>authordate1-4</b> package
Directory	TCITeX/BibTeX/bst/beebe

---

As does `authordate1.bst`, this style produces author-date reference lists based loosely on the recommendations of *British Standard 1629* (1976 edition), Butcher's *Copy-editing* (Cambridge University Press, 1981), and the *Chicago Manual of Style* (1982 edition). The style differs from `authordate1.bst` in that it uses downstyle titles; that is, titles that are lowercase except for the first letter, any letter following a colon, and letters protected by opening and closing braces. The style must be used in conjunction with certain re-definitions of `thebibliography` and `\cite`, which are provided in the required L<sup>A</sup>T<sub>E</sub>X package *authordate1-4*.

**Sample Citations and Bibliography****Example using authordate2**

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article (Lincoll, 1977) in a collection, the article (Oaho *et al.*, 1983) in a proceedings, the article (Aamport, 1986), the book (Knuth, 1981), the booklet (Knuth, 1988), and to the thesis (Phony-Baloney, 1988). Combined citations like (Lincoll, 1977; Aamport, 1986) may have special appearance. The bibliography section for these citations comes next.

**References**

**authordate3.bst**

---

Format of reference list label	None
Organization of reference list	Alphabetical by author
Format of citation	(Author, date) (Author & Author, date) (Author <i>et al.</i> , date)
Required files	<b>authordate1-4</b> package
Directory	TCITeX/BibTeX/bst/beebe

---

As does `authordate1.bst`, this style produces author-date reference lists based loosely on the recommendations of *British Standard 1629* (1976 edition), Butcher's *Copy-editing* (Cambridge University Press, 1981), and the *Chicago Manual of Style* (1982 edition). Uppercase letters in article, journal, and book titles are left as given in the `.bib` file. The style differs from `authordate1.bst` in that author's names are given in small capitals in the list of references. The style must be used in conjunction with certain re-definitions of `thebibliography` and `\cite`, which are provided in the required L<sup>A</sup>T<sub>E</sub>X package *authordate1-4*.

**Sample Citations and Bibliography****Example using authordate3**

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article (Lincoll, 1977) in a collection, the article (Oaho *et al.*, 1983) in a proceedings, the article (Aamport, 1986), the book (Knuth, 1981), the booklet (Knuth, 1988), and to the thesis (Phony-Baloney, 1988). Combined citations like (Lincoll, 1977; Aamport, 1986) may have special appearance. The bibliography section for these citations comes next.

**References**

**authordate4.bst**

---

Format of reference list label	None
Organization of reference list	Alphabetical by author
Format of citation	(Author, date) (Author & Author, date) (Author <i>et al.</i> , date)
Required files	<b>authordate1-4</b> package
Directory	TCITeX/BibTeX/bst/beebe

---

As does `authordate3.bst`, this style produces author-date reference lists based loosely on the recommendations of *British Standard 1629* (1976 edition), Butcher's *Copy-editing* (Cambridge University Press, 1981), and the *Chicago Manual of Style* (1982 edition). Author's names are given in small capitals in the list of references. The style differs from `authordate3.bst` in that it uses downstyle titles—titles that are lowercase except for the first letter, any letter following a colon, and letters protected by opening and closing braces. The style must be used in conjunction with certain re-definitions of `thebibliography` and `\cite`, which are provided in the required L<sup>A</sup>T<sub>E</sub>X package *authordate1-4*.

**Sample Citations and Bibliography****Example using authordate4**

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article (Lincoll, 1977) in a collection, the article (Oaho *et al.*, 1983) in a proceedings, the article (Aamport, 1986), the book (Knuth, 1981), the booklet (Kvuth, 1988), and to the thesis (Phony-Baloney, 1988). Combined citations like (Lincoll, 1977; Aamport, 1986) may have special appearance. The bibliography section for these citations comes next.

**References**

## birthday.bst

---

Format of reference list label	None
Organization of reference list	In order by month and day
Format of citation	[—]
Required files	<i>directory</i> package
Directory	TCITeX/BibTeX/bst/directory
Sample BibTeX Databases:	
business.bib	
family.bib	
test.bib	

---

The style is part of *directory*, a macro package for L<sup>A</sup>T<sub>E</sub>X and BibT<sub>E</sub>X that facilitates the construction, maintenance, and use of a database that is similar to an address book. You can use the package to construct your own address book; in this way, the package operates like ordinary BibT<sub>E</sub>X styles except that the reference list it produces contains information about companies, people, and places instead of published articles and books. You can also use the package to include information about companies, people, and places in your document; see *letter.bst* on page 507.

All styles associated with *directory* require the L<sup>A</sup>T<sub>E</sub>X *directory* package, which is available on the program CD in the directory CTAN/biblio/bibtex/contrib/directory. Follow the standard procedure for adding the package to your program installation. Modifications are required to use entries derived from both *directory* operations and standard bibliography operations in the same document. For more information, see the file *directory.tex* in CTAN/biblio/bibtex/contrib/directory on the program CD.

The *directory* styles also require the use of the `\dir{key}` command instead of the `\cite{key}` command. In your document, use T<sub>E</sub>X fields containing `\dir{key}` commands instead of standard citations, as described below. The styles support a `\nodir{key}` command, which creates a list with no citations in the text. With the `\nodir{key}` command, the *birthday.bst* style produces a reference list containing full birthdate information for all entries in the referenced database, as shown in the illustration that follows.

### ► To enter a `\nodir` command in a T<sub>E</sub>X field

1. Place the insertion point where you want the citation to appear.
2. From the Insert menu, choose Typeset Object and then choose TeX Field.
3. In the entry area, type `\nodir{key}` where *key* is the key for the database entry you want to cite.
4. Choose OK.

**Sample Citations and Bibliography**

**Example using birthday**

\* 29/1 Donald Ernest Knudson

\* 6/2/1973 Christophe Geuzaine

\* 10/2, 5/11 and 1/1 Daffy Duck Knudson, Bugs Bunny and Pluto

\* 27/2 Bip P. Knudson

**cbe.bst**

---

Format of reference list label	None
Organization of reference list	Alphabetical by author
Format of citation	(Author, date) (Author and Author, date) (Author et al., date)
Required files	<b>astron</b> package
Directory	TCITeX/BibTeX/bst/beebe

---

The file produces bibliographies approximately in the Council of Biology Editors format, which is used by *Evolution*, *American Naturalist*, and many other journals. It was adapted from `apalike.bst`, incorporating features of `astron.bst`. In the reference list, authors' names are printed in small capitals. The style requires the *astron* package.

### Sample Citations and Bibliography

#### Example using cbe

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article (Lincoll, 1977) in a collection, the article (Oaho et al., 1983) in a proceedings, the article (Aamport, 1986), the book (Knuth, 1981), the booklet (Knuth, 1988), and to the thesis (Phony-Baloney, 1988). Combined citations like (Lincoll, 1977; Aamport, 1986) may have special appearance. The bibliography section for these citations comes next.

#### References

**cea.bst**

---

Format of reference list label	None
Organization of reference list	Alphabetical by author
Format of citation	(Author, date) (Author and Author, date) (Author et al., date)
Required files	<b>cea</b> package
Directory	TCITeX/BibTeX/bst/beebe

---

The style is the Bib<sub>T</sub>E<sub>X</sub> style for *Computers and Electronics in Agriculture*. The reference list is double-spaced. For every entry, the style requires a ‘year’ field, and either an author (in some cases, an editor) field or a key field. The command `\cite` results in (Jones, 1986) in the text. The reference list has no labels but includes a date immediately after the author’s name. Author (and editor) names appear last name first. The style is adapted from the bibliography style `apalike.bst` (24-Jan.-88 version). It requires the **cea** package.

1

**Sample Citations and Bibliography**

**Example using cea**

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article (Lincoll, 1977) in a collection, the article (Oaho et al., 1983) in a proceedings, the article (Aamport, 1986), the book (Knuth, 1981), the booklet (Kivth, 1988), and to the thesis (Phony-Baloney, 1988). Combined citations like (Lincoll, 1977; Aamport, 1986) may have special appearance. The bibliography section for these citations comes next.

**cell.bst**

---

Format of reference list label	[Author, date] [Author and Author, date] [Author et al., date]
Organization of reference list	Alphabetical by author
Format of citation	[Author, date] [Author and Author, date] [Author et al., date]
Directory	TCITeX/BibTeX/bst/beebe

---

The style is a modification of the bibliography style `jmb.bst`, which was designed to approximate the bibliography style of the *Journal of Molecular Biology* and *Journal of Theoretical Biology*. Bibliography entries for articles, books, and items in proceedings are formatted carefully. You can toggle between styles appropriate for the two journals by toggling the titles on and off. The *Journal of Theoretical Biology* requires titles; the *Journal of Molecular Biology* doesn't.

► **To toggle the titles off**

1. Choose  or, from the Insert menu, choose Typeset Object and then choose TeX Field.
2. In the entry area, type `\nocite{TitlesOn}` and choose OK.
3. Make sure the bibliography database contains a bibliography article with the same citation key.

## Sample Citations and Bibliography

### Example using cell

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [Lincoll, 1977] in a collection, the article [Oaho et al., 1983] in a proceedings, the article [Aamport, 1986], the book [Knuth, 1981], the booklet [Kuvth, 1988], and to the thesis [Phony-Baloney, 1988]. Combined citations like [Lincoll, 1977, Aamport, 1986] may have special appearance. The bibliography section for these citations comes next.

### References

**econometrica.bst**

---

Format of reference list label	None
Organization of reference list	Alphabetical by author
Format of citation	(Author date) (Author and Author date) (Author, Author, and Author date)
Required files	<i>harvard</i> package
Directory	TCITeX/BibTeX/bst/beebe

---

This BibT<sub>E</sub>X bibliography style was created for *Econometrica*. Authors' names in the reference list are produced in small capitals. The style must be used with the *harvard* package.

**Sample Citations and Bibliography****Example using econometrica**

BibT<sub>E</sub>X has been selected for the bibliography choice in this shell document. One of the sample BibT<sub>E</sub>X databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article (Lincoll 1977) in a collection, the article (Oaho, Ullman, and Yannakakis 1983) in a proceedings, the article (Aamport 1986), the book (Knuth 1973:1981), the booklet (Knuth 1988), and to the thesis (Phony-Baloney 1988). Combined citations like (Lincoll 1977, Aamport 1986) may have special appearance. The bibliography section for these citations comes next.

## email.bst

---

Format of reference list label	None or abbreviated name
Organization of reference list	Alphabetical by person
Format of citation	[—]
Required files	<i>directory</i> package
Directory	TCITeX/BibTeX/bst/directory
Sample BibTeX Databases:	
business.bib	
family.bib	
test.bib	

---

The style is part of *directory*, a macro package for L<sup>A</sup>T<sub>E</sub>X and BibT<sub>E</sub>X that facilitates the construction, maintenance, and use of a database that is similar to an address book. You can use the package to construct your own address book; in this way, the package operates like ordinary BibT<sub>E</sub>X styles except that the reference list it produces contains information about companies, people, and places instead of published articles and books. You can also use the package to include information about companies, people, and places in your document; see *letter.bst* on page 507.

All styles associated with *directory* require the L<sup>A</sup>T<sub>E</sub>X *directory* package, which is available on the program CD in the directory CTAN/biblio/bibtex/contrib/directory. Follow the standard procedure for adding the package to your program installation. Modifications are required to use entries derived from both *directory* operations and standard bibliography operations in the same document. For more information, see the file *directory.tex* in CTAN/biblio/bibtex/contrib/directory on the program CD.

The *directory* styles also require the use of the `\dir{key}` command instead of the `\cite{key}` command. In your document, use T<sub>E</sub>X fields containing `\dir{key}` commands instead of standard citations, as described below. The styles support a `\nodir{key}` command, which creates a list with no citations in the text.

### ► To enter a `\dir` command in a T<sub>E</sub>X field

1. Place the insertion point where you want the citation to appear.
2. From the Insert menu, choose Typeset Object and then choose TeX Field.
3. In the entry area, type `\dir{key}` where *key* is the key for the database entry you want to cite.
4. Choose OK.

The *email.bst* style produces a reference list containing the email addresses corresponding to the cited keys. It prints a name at the citation point unless the `\nodir{key}` command is used. The first sample shown below illustrates an email address list created with `\dir{key}` commands in the text. The second sample illustrates an email address list created using a `\nodir{*}` command without any preceding text. The samples were created using the databases *business.bib* and *family.bib*.

### Sample Citations and Bibliography

#### Example using email

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. The citations in this sentence have been created with T<sub>E</sub>X commands that replace standard citations. The list below contains an address for **Donald Ernest Knudson** and also for **Christophe Geuzaine**. It also contains listings for **Bip P. Knudson** and for **The Knudsoft Company**. The email list for these citations comes next.

**Christophe Geuzaine** *p* Christophe.Geuzaine@advalvas.be *w* Christophe.Geuzaine@ulg.ac.be

**The Knudsoft Company** *knud@knudsoft.com*

**Bip P. Knudson** *p* bip\_bip@free.prov.gnu

**Donald Ernest Knudson** *p* duck@novosi.uni.gnu

### Sample Citations and Bibliography

#### Example using email

**Christophe Geuzaine** *p* Christophe.Geuzaine@advalvas.be *w* Christophe.Geuzaine@ulg.ac.be

**The Knudsoft Company** *knud@knudsoft.com*

**Bip P. Knudson** *p* bip\_bip@free.prov.gnu

**Donald Ernest Knudson** *p* duck@novosi.uni.gnu

## email-html.bst

---

Format of reference list label	None or abbreviated name
Organization of reference list	Alphabetical by person
Format of citation	[—]
Required files	<i>directory</i> package
Directory	TCITeX/BibTeX/bst/directory
Sample BibTeX Databases:	
business.bib	
family.bib	
test.bib	

---

The style is part of `directory`, a macro package for L<sup>A</sup>T<sub>E</sub>X and BibT<sub>E</sub>X that facilitates the construction, maintenance, and use of a database that is similar to an address book. You can use the package to construct your own address book; in this way, the package operates like ordinary BibT<sub>E</sub>X styles except that the reference list it produces contains information about companies, people, and places instead of published articles and books. You can also use the package to include information about companies, people, and places in your document; see `letter.bst` on page 507.

Similar to `email.bst`, `email-html.bst` produces an HTML file for a reference list containing full database information corresponding to the cited keys or to the `\nodir{key}` command. The style supports URL fields within the bibliographic information, so that entries in the list become links to the resources themselves. The resulting HTML file can stand alone or be incorporated into the HTML file for the document containing the citations. The style doesn't produce an automatic heading for the list.

All styles associated with `directory` require the L<sup>A</sup>T<sub>E</sub>X *directory* package, which is available on the program CD in the directory `CTAN/biblio/bibtex/contrib/directory`. Follow the standard procedure for adding the package to your program installation. Modifications are required to use entries derived from both `directory` operations and standard bibliography operations in the same document. For more information, see the file `directory.tex` in `CTAN/biblio/bibtex/contrib/directory` on the program CD.

The `directory` styles also require the use of the `\dir{key}` command instead of the `\cite{key}` command. In your document, use T<sub>E</sub>X fields containing `\dir{key}` commands instead of standard citations, as described for `email.bst` on page 471. The styles support a `\nodir{key}` command, which creates an address book with no citations in the text.

To use the style in *SWP* and *SW*, follow the standard procedure to insert citations in your document and specify and generate a BibT<sub>E</sub>X address list. Then, use the resulting HTML file as it stands or incorporate it into your document, according to the instructions that follow.

### ► To incorporate the HTML bibliography into a document

1. Using an ASCII editor, open the `.bbl` file created for your document.
2. Delete the `<HTML>`, `<TITLE>`, and `</HTML>` commands.
3. Copy the contents of the file to the clipboard.
4. Open your document in *SWP* or *SW*.
5. Delete the `[BIBTEX]` instruction.
6. In its place, insert an HTML object:
  - a. From the **Insert** menu, choose **HTML Field**.

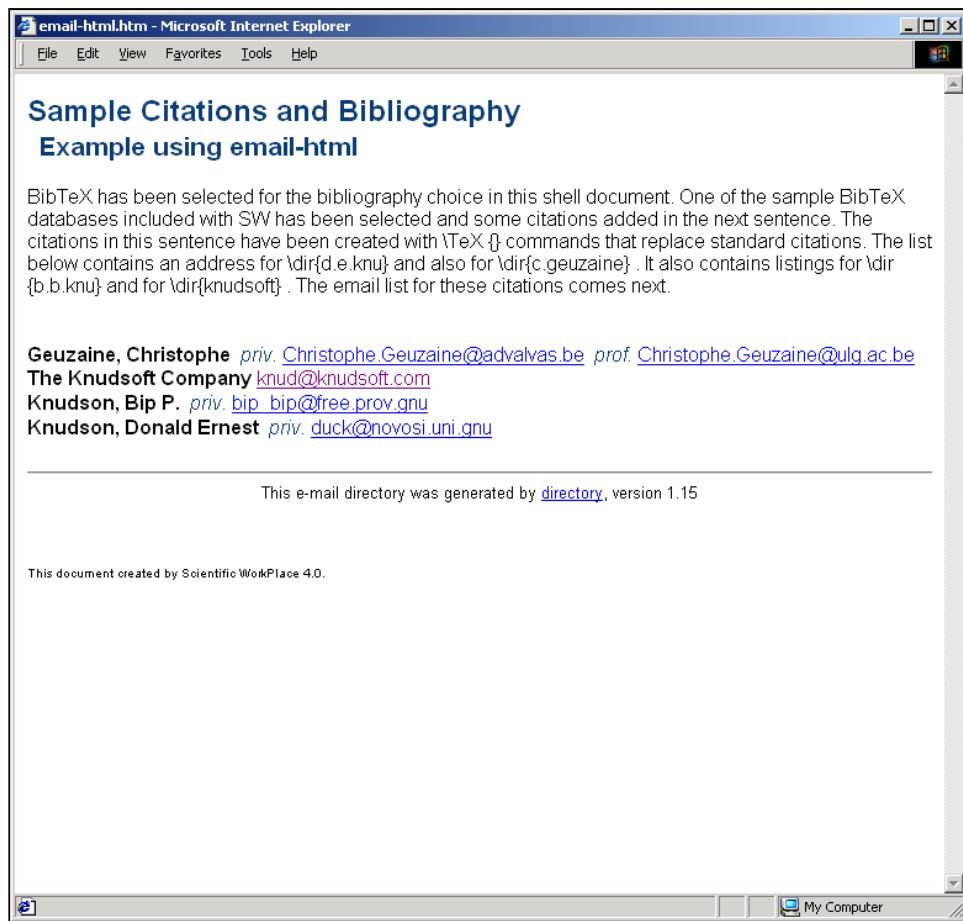

474 Chapter 11 BibT<sub>E</sub>X Bibliography Styles

- b. Paste the contents of the clipboard into the field.
- c. Choose OK.

7. Export the file to HTML:

- a. From the File menu, choose Export Document.
- b. Select the document.
- c. In the Save as type box, choose the HTML format you want.
- d. Choose OK.

The sample .htm file shown here was created in SWP according to these instructions. the .tex file contains a `\nodir{*}` command that was deleted after the .htm file was created but before the document was exported to HTML. The sample was created using the databases `business.bib` and `family.bib`.

**finplain.bst**

---

Format of reference list label	[number]
Organization of reference list	Alphabetical by author
Format of citation	[number]
Directory	TCITeX/BibTeX/bst/finbib

---

This style is a translation into Finnish of the Bib<sub>T</sub>E<sub>X</sub> standard bibliography style `plain.bst`, which sorts entries alphabetically and labels them with numbers.

**Sample Citations and Bibliography****Example using finplain**

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [4] in a collection, the article [5] in a proceedings, the article [1], the book [2], the booklet [3], and to the thesis [6]. Combined citations like [4, 1] may have special appearance. The bibliography section for these citations comes next.

**gerabbrv.bst**

---

Format of reference list label	[number]
Organization of reference list	Alphabetical by author
Format of citation	[number]
Required files	<i>bibgerm</i> package; <i>german</i> .or <i>ngerman</i> package
Directory	TCITeX/BibTeX/bst/germbib
Sample BibT <sub>E</sub> X Databases:	
gerbibtx.bib	
gerxmp1e.bib	

---

For use with either German or English, the styles in the `germbib` directory require the *bibgerm* package and either the *german* or *ngerman* package. The packages are available from CTAN at <http://www.ctan.org>. The style prints the authors' names in small capitals in the reference list. The sample was created using the database `gerbibtx.bib` and `gerxmp1e.bib`.

### Sample Citations and Bibliography

#### Example using gerabbrv

BibT<sub>E</sub>X has been selected for the bibliography choice in this shell document. One of the sample BibT<sub>E</sub>X databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [4] in a collection, the article [5] in a proceedings, the article [1], the book [2], the booklet [3], and to the thesis [6]. Combined citations like [4, 1] may have special appearance. The bibliography section for these citations comes next.

**humannat.bst**

---

Format of reference list label	Author
Organization of reference list	Alphabetical by author
Format of citation	(Author, date) (Author and Author, date) (Author et al., date)
Required files	<b>astron</b> package
Directory	TCITeX/BibTeX/bst/beebe

---

The style produces bibliographies with a format similar to that used in *Human Nature* and *American Anthropologist*. The style was adapted from `apalike.bst`, incorporating features of `astron.bst` style. It must be used with the **astron** package.

**Sample Citations and Bibliography****Example using humannat**

BibT<sub>E</sub>X has been selected for the bibliography choice in this shell document. One of the sample BibT<sub>E</sub>X databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article (Lincoll, 1977) in a collection, the article (Oaho et al., 1983) in a proceedings, the article (Aamport, 1986), the book (Knuth, 1981), the booklet (Knuth, 1988), and to the thesis (Phony-Baloney, 1988). Combined citations like (Lincoll, 1977; Aamport, 1986) may have special appearance. The bibliography section for these citations comes next.

**References**

- Aamport, L. A.  
1986. The gnats and gnus document preparation system. *G-Animal's Journal*, 41(7):73+. This is a full ARTICLE entry.
- Knuth, D. E.  
1981. *Seminumerical Algorithms*, volume 2 of *The Art of Computer Programming*, second edition. Reading, Massachusetts: Addison-Wesley. This is a full BOOK entry.
- Knuth, J. C.  
1988. The programming of computer art. Vernier Art Center, Stanford, California. This is a full BOOKLET entry.
- Lincoll, D. D.  
1977. Semigroups of recurrences. In *High Speed Computer and Algorithm Organization*, D. J. Lipooll, D. H. Lawrie, and A. H. Sameh, eds., number 23 in *Fast Computers*, part 3, Pp. 179-183. New York: Academic Press. This is a full INCOLLECTION entry.
- Oaho, A. V., J. D. Ullman, and M. Yannakakis  
1983. On notions of information transfer in VLSI circuits. In *Proc. Fifteenth Annual ACM Symposium on the Theory of Computing*, W. V. Oz and M. Yannakakis, eds., number 17 in *All ACM Conferences*, Pp. 133-139, Boston: The OX Association for Computing Machinery, Academic Press. This is a full INPROCEEDINGS entry.
- Phony-Baloney, F. P.  
1988. *Fighting Fire with Fire: Festooning French Phrases*. PhD dissertation, Faustord University, Department of French. This is a full PHDTHESIS entry.

**ieeex.bst**

---

Format of reference list label	[number]
Organization of reference list	In order of first citation
Format of citation	[number]
Directory	TCITeX/BibTeX/bst/ieeextran

---

The style is a modification of `unsrt.bst`, which lists bibliography entries in the order of their first citation and labels entries with numbers.

### Sample Citations and Bibliography

#### Example using ieeex

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [1] in a collection, the article [2] in a proceedings, the article [3], the book [4], the booklet [5], and to the thesis [6]. Combined citations like [1, 3] may have special appearance. The bibliography section for these citations comes next.

**ieeepes.bst**

---

Format of reference list label	[number]
Organization of reference list	In order of first citation
Format of citation	[number]
Directory	TCITeX/BibTeX/bst/ieeepes
Sample BibT <sub>E</sub> X Database:	
ieeepes	
check.bib	

---

This style supports reference lists for articles according to IEEE instructions. It has been modified from BibT<sub>E</sub>X bibliography style `unsrt.bst`, which lists bibliography entries in the order of their first citation and labels entries with numbers. The style spells out the names of months in the reference list.

### Sample Citations and Bibliography

#### Example using ieeepes

BibT<sub>E</sub>X has been selected for the bibliography choice in this shell document. One of the sample BibT<sub>E</sub>X databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [1] in a collection, the article [2] in a proceedings, the article [3], the book [4], the booklet [5], and to the thesis [6]. Combined citations like [1, 3] may have special appearance. The bibliography section for these citations comes next.

**ieeetr.bst**

---

Format of reference list label	[number]
Organization of reference list	In order of first citation
Format of citation	[number]
Directory	TCITeX/BibTeX/bst/base

---

The *IEEE Transactions* bibliography style (29-Jan-88 version) produces bibliographies with numeric labels, IEEE abbreviations, quotation marks around article titles, and commas that separate all fields except after book titles and before notes. The reference list is presented in order of first citation. Otherwise, the style is much like the plain family of styles, from which it is adapted.

**Sample Citations and Bibliography****Example using ieeetr**

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [1] in a collection, the article [2] in a proceedings, the article [3], the book [4], the booklet [5], and to the thesis [6]. Combined citations like [1, 3] may have special appearance. The bibliography section for these citations comes next.

**inlinebib.bst**

---

Format of reference list label	None
Organization of reference list	Alphabetical by author
Format of footnote label	Subscripted number
Format of citation	Subscripted number in text; full reference in numbered footnote
Required files	<i>inlinebib</i> package
Directory	TCITeX/BibTeX/bst/inlinebib

---

The style produces footnoted references in books and reports; that is, it creates superscripted numbers in the text that refer to footnotes containing the reference information. The style produces complete information the first time the reference is cited and abbreviated information thereafter. The style requires the *inlinebib* package. Instructions for creating footnoted references with `inlinebib.bst` appear on the next page.

The sample that follows was created with the Standard L<sup>A</sup>T<sub>E</sub>X Book shell. The reference list carries the title *Bibliography* and begins on a separate page.

## Sample Citations and Bibliography

### Example using inlinebib

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article<sup>1</sup> in a collection, the article<sup>2</sup> in a proceedings, the article<sup>3</sup>, the same article cited a second time<sup>4</sup>, the book<sup>5</sup>, the booklet<sup>6</sup>, and to the thesis<sup>7</sup>. Combined citations<sup>8-9</sup> may have a special appearance. The bibliography section for these citations comes next.

<sup>1</sup>Daniel D. Lincell, *Semigroups of Recurrences*, in: David J. Lipcoll, D. H. Lawrie and A. H. Sameh, (eds.), *High Speed Computer and Algorithm Organization*, number 23 in *Fast Computers*, part 3, pp. 179-183. Academic Press, New York, third edition, September 1977

<sup>2</sup>Alfred V. Osho, Jeffrey D. Ullman and Mihalis Yannakakis, *On Notions of Information Transfer in VLSI Circuits*, in: Wizard V. Oz and Mihalis Yannakakis, (eds.), *Proc. Fifteenth Annual ACM Symposium on the Theory of Computing*, number 17 in *All ACM Conferences*, pp. 133-139, Boston, March 1983. The OX Association for Computing Machinery, Academic Press

<sup>3</sup>L[eslie] A. Aamport, "The gnats and gnu document preparation system", *G-Animal's Journal*, 41(7):73+, July 1986

<sup>4</sup>*ibid.*

<sup>5</sup>Donald E. Knuth, *Seminumerical Algorithms*, volume 2 by *The Art of Computer Programming*, Addison-Wesley, Reading, Massachusetts, second edition, 10 January 1981

<sup>6</sup>Jill C. Rivth, "The programming of computer art", *Vernier Art Center*, Stanford, California, February 1988

<sup>7</sup>F. Phidias Phony-Baloney, *Fighting Fire with Fire: Festooning French Phrases*, PhD dissertation, Faunston University, Department of French, June-August 1988

<sup>8</sup>Osho et al., *On Notions of Information Transfer in VLSI Circuits* *cit.*

<sup>9</sup>Donald E. Knuth, *Fundamental Algorithms*, volume 1 by *The Art of Computer Programming*, section 1.2, pp. 10-119, Addison-Wesley, Reading, Massachusetts, second edition, 10 January 1973

## ► To create footnoted references

1. Place the insertion point where you want the citation.
2. Choose  or, from the Insert menu, choose Note.
3. In the Type of Note area, select footnote.
4. With the insertion point in the entry area, choose  or, from the Insert menu, choose Typeset Object and then choose Citation.
5. Select the bibliography reference and choose OK.
6. Choose OK to return to your document.

## Bibliography

**is-abbrev.bst**

---

Format of reference list label	[number]
Organization of reference list	Alphabetical by author
Format of citation	[number]
Directory	TCITeX/BibTeX/bst/beebe

---

The style is a modification of the standard Bib<sub>T</sub>E<sub>X</sub> style `abbrev.bst`, which creates compact entries by abbreviating first names, month names, and journal names. The style sorts entries alphabetically and labels them with numbers. It also contains optional added support for CODEN, ISBN, ISSN, LCCN, and PRICE fields; extended PAGES fields; the PERIODICAL entry; and extended citation label suffixing.

**Sample Citations and Bibliography****Example using is-abbrev**

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [4] in a collection, the article [5] in a proceedings, the article [1], the book [2], the booklet [3], and to the thesis [6]. Combined citations like [4, 1] may have special appearance. The bibliography section for these citations comes next.

**is-alpha.bst**

---

Format of reference list label	[Source label]
Organization of reference list	Alphabetical by author
Format of citation	[Source label]
Directory	TCITeX/BibTeX/bst/beebe

---

The style is a modification of the standard BibT<sub>E</sub>X style `alpha.bst`, which creates source labels such as *Knu66*, formed from the author's name and the year of publication. The style contains optional added support for CODEN, ISBN, ISSN, LCCN, and PRICE fields; extended PAGES fields; the PERIODICAL entry; and extended citation label suffixing.

**Sample Citations and Bibliography****Example using is-alpha**

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [Lin77] in a collection, the article [OUY83] in a proceedings, the article [Aam86], the book [Knu81], the booklet [Kuv88], and to the thesis [PB88]. Combined citations like [Lin77, Aam86] may have special appearance. The bibliography section for these citations comes next.

**References**

Required files	<i>newapa</i> package
Directory	TCITeX/BibTeX/bst/beebe

---

This is a Bib<sub>T</sub>E<sub>X</sub> bibliography style for the *Journal of Atmospheric Science* and the *Journal of Applied Meteorology Monthly Weather Review*. The style is based on *newapa*.bst and requires the *newapa* package.

### Sample Citations and Bibliography

#### Example using jas99

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [Lincoll, 1977] in a collection, the article [Oaho, Ullman & Yannakakis, 1983] in a proceedings, the article [Aamport, 1986], the book [Knuth, 1981], the booklet [Kuvth, 1988], and to the thesis [Phony-Baloney, 1988]. Combined citations like [Lincoll, 1977, Aamport, 1986] may have special appearance. The bibliography section for these citations comes next.

#### References

**jmb.bst**

---

Format of reference list label	[Author, date] [Author & Author, date] [Author <i>et al.</i> , date]
Organization of reference list	Alphabetical by author
Format of citation	[Author, date] [Author & Author, date] [Author <i>et al.</i> , date]
Directory	TCITeX/BibTeX/bst/beebe

---

This bibliography style approximates the bibliography styles of the *Journal of Molecular Biology* and *Journal of Theoretical Biology*. Bibliography entries for articles, books, and items in proceedings are formatted carefully. Toggle between styles appropriate for the two journals by toggling the titles on and off. The *Journal of Theoretical Biology* requires titles; the *Journal of Molecular Biology* doesn't.

► **To toggle the titles off**

1. Choose  or, from the Insert menu, choose Typeset Object and then choose TeX Field.
2. In the entry area, type `\nocite{TitlesOn}` and choose OK.
3. Make sure the bibliography database contains a bibliography article with the same citation key.

### Sample Citations and Bibliography

#### Example using jmb

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [Lincoll, 1977] in a collection, the article [Oaho *et al.*, 1983] in a proceedings, the article [Aamport, 1986], the book [Knuth, 1981], the booklet [Kuvth, 1988], and to the thesis [Phony-Baloney, 1988]. Combined citations like [Lincoll, 1977, Aamport, 1986] may have special appearance. The bibliography section for these citations comes next.

#### References

**jmr.bst**

---

Format of reference list label	None
Organization of reference list	Alphabetical by author
Format of citation	(Author date) (Author date, Author date) (Author, Author & Author date)
Required files	<i>harvard</i> package
Directory	TCITeX/BibTeX/bst/harvard
Sample BibTeX Database:	
harvard.bib	Contains five entries.

---

The `jmr.bst` style is provided as part of the harvard family of BibTeX bibliography styles, which can also be used with manual bibliographies. The style is for the *Journal of Management Research*. Complete citations are in standard parenthetical form. Incomplete citations can be used as nouns, as in *Medd (1999) claims . . .* or *The key result (Medd) . . .*, or as possessives, as in *Medd's (1999) proof . . .*. To avoid L<sup>A</sup>T<sub>E</sub>X errors when using the harvard styles, delete the BibTeX style files in the `bst\beebe` directory.

### Sample Citations and Bibliography

#### Example using jmr

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article (Lincoll 1977) in a collection, the article (Oaho, Ullman & Yannakakis 1983) in a proceedings, the article (Aamport 1986), the book (Knuth 1973:1981), the booklet (Knuth 1988), and to the thesis (Phony-Baloney 1988). Combined citations like (Lincoll 1977, Aamport 1986) may have special appearance. The bibliography section for these citations comes next.

**jtb.bst**

---

Format of reference list label	None
Organization of reference list	Alphabetical by author
Format of citation	(Author, date) or (date) (Author and Author, date) (Author et al., date)
Required files	<i>astron</i> package
Directory	TCITeX/BibTeX/bst/beebe

---

This style produces bibliographies based loosely on the format used in the *Journal of Theoretical Biology*. The style supports short citations in the form of (*date*). It requires the *astron* package.

**Sample Citations and Bibliography****Example using jtb**

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article (Lincoll, 1977) in a collection, the article (Oaho et al., 1983) in a proceedings, the article (Aamport, 1986), the book (Knuth, 1981), the booklet (Knuth, 1988), and to the thesis (Phony-Baloney, 1988). Combined citations like (Lincoll, 1977; Aamport, 1986) may have special appearance. The bibliography section for these citations comes next.

**References**

**jthcarsu.bst**

---

Format of reference list label	[number]
Organization of reference list	In order of first citation
Format of citation	[number]
Directory	TCITeX/BibTeX/bst/beebe

---

This style is a modification of the Bib<sub>T</sub>E<sub>X</sub> standard bibliography style `unsrt.bst`, which lists bibliography entries in the order of their first citation and labels entries with numbers. It is named for the *Journal of Thoracic and Cardiovascular Surgery*.

### Sample Citations and Bibliography

#### Example using jthcarsu

Bib<sub>T</sub>E<sub>X</sub> has been selected for the bibliography choice in this shell document. One of the sample Bib<sub>T</sub>E<sub>X</sub> databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [1] in a collection, the article [2] in a proceedings, the article [3], the book [4], the booklet [5], and to the thesis [6]. Combined citations like [1, 3] may have special appearance. The bibliography section for these citations comes next.

#### References

**jurabib.bst**

---

Format of reference list label	None
Organization of reference list	Alphabetical by author
Format of citation	Author Abbreviated title Date
Required files	<i>jurabib</i> package
Directory	TCITeX/BibTeX/bst/jurabib
Sample Bib <sub>T</sub> E <sub>X</sub> Databases:	
jbttest.bib	
jbttesthu.bib	

---

The *jurabib* package supports automated Bib<sub>T</sub>E<sub>X</sub> citations for legal studies and the humanities. It provides simplified formatting of both the citation and the bibliography entry and supports short titles in citations and reference lists. The style produces the authors' names in bold in the reference list. The bibliography style *jurabib.bst* requires files from the *jurabib* package, available from <http://www.ctan.org>. The sample document was created with the sample databases *jbttest.bib* and *jbttesthu.bib*.

### Sample Citations and Bibliography

#### Example using *jurabib*

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article Lincoll in a collection, the article Oaho/Ullman/Yamakakis in a proceedings, the article Aamport, the book Knuth, the booklet Knvth, and to the thesis Phony-Baloney. Combined citations like Lincoll; Aamport may have special appearance. The bibliography section for these citations comes next.

Directory	TCITeX/BibTeX/bst/jurabib
Sample BibT <sub>E</sub> X Databases:	
	jbttest.bib
	jbttesthu.bib

---

The *jurabib* package supports automated BibT<sub>E</sub>X citations for legal studies and the humanities. It provides simplified formatting of both the citation and the bibliography entry and supports short titles in citations and reference lists. The style produces the authors' names in bold in the reference list. The bibliography style *jureco.bst* requires files from the *jurabib* package, available from <http://www.ctan.org>.

### Sample Citations and Bibliography

#### Example using *jureco*

BibT<sub>E</sub>X has been selected for the bibliography choice in this shell document. One of the sample BibT<sub>E</sub>X databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article Helm (1982) Role of Logic in a collection, the article Helm (1972) Religious Studies 1972, the book Bergmeier (1980), the booklet Kuvth (1988), and to the thesis Alexy (1984). Combined citations like Lundin; Helm (1972) Religious Studies 1972 may have special appearance. The bibliography section for these citations comes next.

#### References

- Alexy, Robert (1984): Theorie der Grundrechte. Habil. Göttingen
- Bergmeier, Roland (1980): Beiträge zur Wissenschaft vom Alten und Neuen Testament. Volume 112: Glaube als Gabe nach Johannes: Religions- und Theologiegeschichtliche Studien zum prädestinarianischen Dualismus im vierten Evangelium. Stuttgart etc.: W. Kohlhammer
- Helm, Paul (1972): Revealed Propositions and Timeless Truths. Religious Studies 8, 127-136

- Lundin, Roger: Interpreting Orphans: Hermeneutics in the Cartesian Tradition, in: The Promise of Hermeneutics., 1-64

**kluwer.bst**

---

Format of reference list label	None
Organization of reference list	Alphabetical by author
Format of citation	(Author date) (Author date, Author date) (Author, Author and Author date)
Required files	<i>harvard</i> package
Directory	TCITeX/BibTeX/bst/harvard
Sample Bib <sub>T</sub> E <sub>X</sub> Database: harvard.bib	Contains five entries.

---

The `kluwer.bst` style is provided as part of the `harvard` family of Bib<sub>T</sub>E<sub>X</sub> bibliography styles, which can also be used with manual bibliographies. The style requires the *harvard* package. The style attempts to conform to the requirements of Kluwer Academic Publishers. Complete citations are in standard parenthetical form. Incomplete citations can be used as nouns, as in *Medd (1999) claims . . .* or *The key result (Medd) . . .*, or as possessives, as in *Medd's (1999) proof . . .*. To avoid L<sup>A</sup>T<sub>E</sub>X errors when using the `harvard` styles, delete the Bib<sub>T</sub>E<sub>X</sub> style files in the `bst\beebe` directory.

**Sample Citations and Bibliography****Example using kluwer**

Bib<sub>T</sub>E<sub>X</sub> has been selected for the bibliography choice in this shell document. One of the sample Bib<sub>T</sub>E<sub>X</sub> databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article (Lincoll 1977) in a collection, the article (Oaho, Ullman and Yannakakis 1983) in a proceedings, the article (Aamport 1986), the book (Knuth 1981), the booklet (Kuvth 1988), and to the thesis (Phony-Baloney 1988). Combined citations like (Lincoll 1977, Aamport 1986) may have special appearance. The bibliography section for these citations comes next.

**References**

- Aamport, L. A.: 1986, The gnats and gaws document preparation system, *G-Animal's Journal* **41**(7), 73+. This is a full ARTICLE entry.
- Knuth, D. E.: 1981, *Seminumerical Algorithms*, Vol. 2 of *The Art of Computer Programming*, second edn, Addison-Wesley, Reading, Massachusetts. This is a full BOOK entry.
- Kuvth, J. C.: 1988, The programming of computer art, Vernier Art Center, Stanford, California. This is a full BOOKLET entry.
- Lincoll, D. D.: 1977, Semigroups of recurrences, in D. J. Lipcoll, D. H. Lawrie and A. H. Sameh (eds), *High Speed Computer and Algorithm Organization*, third edn, number 23 in *Fast Computers*, Academic Press, New York, part 3, pp. 179-183. This is a full INCOLLECTION entry.
- Oaho, A. V., Ullman, J. D. and Yannakakis, M.: 1983, On notions of information transfer in VLSI circuits, in W. V. Oz and M. Yannakakis (eds), *Proc. Fifteenth Annual ACM Symposium on the Theory of Computing*, number 17 in *All ACM Conferences*, The OX Association for Computing Machinery, Academic Press, Boston, pp. 133-139. This is a full INPROCEEDINGS entry.
- Phony-Baloney, F. P.: 1988, *Fighting Fire with Fire: Festooning French Phrases*, PhD dissertation, Farnstord University, Department of French. This is a full PHDTHESIS entry.

**letter.bst**

---

Format of reference list label	No list generated
Organization of reference list	No list generated
Format of citation	[name] or [name with address]
Required files	<i>directory</i> package
Directory	TCITeX/BibTeX/bst/directory
Sample BibTeX Databases:	
	business.bib
	family.bib
	test.bib

---

The style is part of *directory*, a macro package for L<sup>A</sup>T<sub>E</sub>X and BibTeX that facilitates the construction, maintenance, and use of a database that is similar to an address book. You can use the package to construct your own address book; in this way, the package operates like ordinary BibTeX styles except that the reference list it produces contains information about companies, people, and places instead of published articles and books. You can also use the package to include information about companies, people, and places in your document.

All styles associated with *directory* require the L<sup>A</sup>T<sub>E</sub>X *directory* package, which is available on the program CD in the directory CTAN/biblio/bibtex/contrib/directory. Follow the standard procedure for adding the package to your program installation. Modifications are required to use entries derived from both *directory* operations and standard bibliography operations in the same document. For more information, see the file *directory.tex* in CTAN/biblio/bibtex/contrib/directory on the program CD.

The *directory* styles also require the use of the `\dir{key}` command instead of the `\cite{key}` command. In your document, use TeX fields containing `\dir{key}` commands instead of standard citations, as described below.

The *letter.bst* style, which operates differently from other styles in the package, doesn't produce a directory list. Instead, it prints the name or name and address corresponding to the cited key at the point of the citation.

► **To enter a `\dir` command in a TeX field**

1. Place the insertion point where you want the citation to appear.
2. From the Insert menu, choose Typeset Object and then choose TeX Field.
3. In the entry area, type `\dir{key}` where *key* is the key for the database entry you want to cite.
4. Choose OK.

The sample was created using the databases *business.bib* and *family.bib*.

### Sample Citations and Bibliography

#### Example using letter

BibT<sub>E</sub>X has been selected for the bibliography choice in this shell document. One of the sample BibT<sub>E</sub>X databases included with SW has been selected and some citations added in the next sentence. The citation in this sentence for **Microknd Corp.** has been created with T<sub>E</sub>X commands that replace standard citations. The citation below prints information in the text of the document for cited names:

**Christophe Geuzaine**  
**Ir., Research Assistant**  
**University of Liège, Dept. of Electrical Engineering**  
**Institut Montefiore (B28, P32, I21),**  
**Sart Tilman Campus, B-4000 Liège, Belgium**  
The style doesn't print a directory list.

**mbplain.bst**

---

Format of reference list label	[number]
Organization of reference list	Alphabetical by author
Format of citation	[number]
Directory	TCITeX/BibTeX/bst/multibib

---

The Bib<sub>T</sub>E<sub>X</sub> bibliography style `mbplain.bst` allows references to multiple bibliographies within a single document. It is a modification of the style `plain.bst`, which sorts entries alphabetically and labels them with numbers.

**Sample Citations and Bibliography****Example using mbplain**

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [4] in a collection, the article [5] in a proceedings, the article [1], the book [2], the booklet [3], and to the thesis [6]. Combined citations like [4, 1] may have special appearance. The bibliography section for these citations comes next.

**mmlapa.bst**

---

Format of reference list label	[None]
Organization of reference list	Alphabetical by author
Format of citation	(Author, date) (Author, date; Author, date) (Author, Author & Author, date)
Required files	<i>mmlapa</i> package
Directory	TCITeX/BibT <sub>E</sub> X/bst/mmlapa

---

The bibliography style file `mmlapa.bst` automates the formatting of bibliographies and citations according to the American Psychological Association (APA) style. It supports many author-date citation formats, including (date), (e.g. author, date), and (author, datea,b). The style was based on `plain.bst`, which sorts entries alphabetically, and on `named.bst` and `apalike.bst`. It requires the *mmlapa* package, which is available from CTAN at <http://www.ctan.org>.

Note that the style doesn't automatically alphabetize citations in the text. Because the style produces citations in the order you enter them, you must enter references in alphabetical order to have them appear alphabetically within a citation. Note too that APA style specifies that full author order be used the first time a multi-author reference is cited and *et al.* be used thereafter. To adhere to the specification, use the `\cite`, `\citeyear`, and `\shortcite` commands appropriately.

### Sample Citations and Bibliography

#### Example using mmlapa

BibT<sub>E</sub>X has been selected for the bibliography choice in this shell document. One of the sample BibT<sub>E</sub>X databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article (Lincoll, 1977) in a collection, the article (Osho, Ullman & Yannakakis, 1983) in a proceedings, the article (Aamport, 1986), the book (Knuth, 1981), the booklet (Knuth, 1988), and to the thesis (Phony-Baloney, 1988). Combined citations like (Lincoll, 1977; Aamport, 1986) may have special appearance. The bibliography section for these citations comes next.

#### References

- Osho, A. V., Ullman, J. D. & Yannakakis, M. (1983). On notions of information transfer in VLSI circuits. In O. W. V. & Yannakakis, M. (Eds.), *Fifteenth Annual ACM Symposium on the Theory of Computing*, number 17 in *All ACM Conferences* (pp. 133-139). Boston: Academic Press. This is a full INPROCEEDINGS entry.
- Phony-Baloney, F. P. (1988). *Fighting Fire with Fire: Festooning French Phrases*. PhD dissertation. Funstord University, Department of French. This is a full PHDTHESIS entry.

**named.bst**

---

Format of reference list label	[Author, date] [Author <i>et al.</i> , date]
Organization of reference list	Alphabetical by author
Format of citation	[Author, date] or [date] [Author and Author, date] or [date] [Author <i>et al.</i> , date] or [date]
Required files	<i>named</i> package
Directory	TCITeX/BibTeX/bst/beebe

---

The style supports year-only citations. The style orders the reference list alphabetically by author or by whatever passes for author in the absence of an author. The style must be used with the *named* package.

### Sample Citations and Bibliography

#### Example using named

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [Lincoll, 1977] in a collection, the article [Oaho *et al.*, 1983] in a proceedings, the article [Aamport, 1986], the book [Knuth, 1973c:1981], the booklet [Knuth, 1988], and to the thesis [Phony-Baloney, 1988]. Combined citations like [Lincoll, 1977, Aamport, 1986] may have special appearance. The bibliography section for these citations comes next.

**nar.bst**

---

Format of reference list label	[number]
Organization of reference list	In order of first citation
Format of citation	[number]
Directory	TCITeX/BibTeX/bst/beebe

---

The style supports bibliographies for the journal *Nucleic Acid Research*. It was adapted from the standard BibTeX style `unsrt.bst`, which organizes the reference list in order of first citation.

**Sample Citations and Bibliography****Example using nar**

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [1] in a collection, the article [2] in a proceedings, the article [3], the book [4], the booklet [5], and to the thesis [6]. Combined citations like [1, 3] may have special appearance. The bibliography section for these citations comes next.

**nederlands.bst**

---

Format of reference list label	None
Organization of reference list	Alphabetical by author
Format of citation	(Author date) (Author and Author date) (Author <i>et al.</i> date)
Required files	<i>harvard</i> package
Directory	TCITeX/BibTeX/bst/harvard
Sample Bib <sub>T</sub> E <sub>X</sub> Database:	
harvard.bib	Contains five entries.

---

The `nederlands.bst` style is provided as part of the `harvard` family of Bib<sub>T</sub>E<sub>X</sub> bibliography styles, which can also be used with manual bibliographies. The style, which requires the *harvard* package, conforms to Dutch conventions. Complete citations are in standard parenthetical form. Incomplete citations can be used as nouns, as in *Medd (1999) claims . . .* or *The key result (Medd) . . .*, or as possessives, as in *Medd's (1999) proof . . .*. To avoid L<sup>A</sup>T<sub>E</sub>X errors when using the `harvard` styles, delete the Bib<sub>T</sub>E<sub>X</sub> style files in the `bst\beebe` directory.

**Sample Citations and Bibliography****Example using nederlands**

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article (Lincoll 1977) in a collection, the article (Oaho *et al.* 1983) in a proceedings, the article (Aamport 1986), the book (Knuth 1981), the booklet (Kuvth 1988), and to the thesis (Phony-Baloney 1988). Combined citations like (Lincoll 1977, Aamport 1986) may have special appearance. The bibliography section for these citations comes next.

**References**

**oxford-en.bst**

---

Format of reference list label	None
Organization of reference list	Alphabetical by author
Format of citation	(Full reference at first citation; abbreviated thereafter)
Required files	<i>oxford</i> package
Directory	TCITeX/BibTeX/bst/oxford

---

The style is one of several styles based on the harvard family of Bib<sub>T</sub>E<sub>X</sub> bibliography styles. The first time a reference is cited, the style produces a full reference in the text at the point of the citation. Subsequent citations for that reference are abbreviated. The in-text citation *ibid* is used when the current citation is the same as the last. The style *oxford-en.bst* is for entries in English. It requires the *oxford* package. The sample below was created using a modification of the `xamp1.bib` database.

### Sample Citations and Bibliography

#### Example using *oxford-en*

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article (Daniel D. Lincoll, 'Semigroups of Recurrences', in David J. Lipcoll, D. H. Lawrie & A. H. Samel eds., *High Speed Computer and Algorithm Organization*, no. 23 in *Fast Computers*, 3rd edn., part 3, pp. 179-183. This is a full INCOLLECTION entry (New York: Academic Press, 1977)) in a collection, the article (Alfred V. Oaho, Jeffrey D. Ullman & Mihalis Yannakakis, 'On Notions of Information Transfer in VLSI Circuits', in Wizard V. Oz & Mihalis Yannakakis eds., *Proc. Fifteenth Annual ACM Symposium on the Theory of Computing*, no. 17 in *All ACM Conferences*, pp. 133-139. This is a full INPROCEEDINGS entry, The OX Association for Computing Machinery (Boston: Academic Press, 1983)) in a proceedings, the article (Leslie A. Aamport, 'The Gnats and Gans Document Preparation System', *G-Animal's Journal*, vol. 41, no. 7, 73+ (1986). This is a full ARTICLE entry), the book (Donald E. Knuth, *Fundamental Algorithms*, vol. 1 of *The Art of Computer Programming*, section 1.2, pp. 10-119, 2nd edn., This is a full INBOOK entry (Reading, Massachusetts: Addison-Wesley, 1973)), the booklet (Jill C. Knuth, 'The Programming of Computer Art', Vernier Art Center, This is a full BOOKLET entry (Stanford, California, 1988)), and to the thesis (F. Phidias Phony-Baloney, *Fighting Fire with Fire: Festooning French Phrases*, PhD dissertation, Fanford University, This is a full PHDTHESIS entry (Department of French, 1988)). Combined citations like (Lincoll, Aamport) may have special appearance. The bibliography section for these citations comes next.

---

Format of reference list label	None
Organization of reference list	Alphabetical by author
Format of citation	(Full reference at first citation; abbreviated thereafter)
Required files	<i>oxford</i> package
Directory	TCITeX/BibTeX/bst/oxford

---

The style is one of several styles based on the harvard family of BibT<sub>E</sub>X bibliography styles. The first time a reference is cited, the style produces a full reference in the text at the point of the citation. Subsequent citations for that reference are abbreviated. The in-text citation *ibid* is used when the current citation is the same as the last. The style *oxford-in.bst* is for entries in English. It requires the *oxford* package. The sample below was created using a modification of the `xamp1.bib` database.

### Sample Citations and Bibliography

#### Example using *oxford-in*

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article (Daniel D. Lincoll, 'Semigroups of Recurrences', in David J. Lipcoll, D. H. Lawrie & A. H. Sameh eds., *High Speed Computer and Algorithm Organization*, no. 23 in *Fast Computers*, 3rd edn., part 3, pp. 179-183. This is a full INCOLLECTION entry (New York: Academic Press, 1977)) in a collection, the article (Alfred V. Oaho, Jeffrey D. Ullman & Mihalis Yannakakis, 'On Notions of Information Transfer in VLSI Circuits', in Wizard V. Oz & Mihalis Yannakakis eds., *Proc. Fifteenth Annual ACM Symposium on the Theory of Computing*, no. 17 in *All ACM Conferences*, pp. 133-139. This is a full INPROCEEDINGS entry, The OX Association for Computing Machinery (Boston: Academic Press, 1983)) in a proceedings, the article (Leslie A. Aamport, 'The Gnats and Gaus Document Preparation System', *G-Animal's Journal*, vol. 41, no. 7, 73+ (1986). This is a full ARTICLE entry), the book (Donald E. Knuth, *Fundamental Algorithms*, vol. 1 of *The Art of Computer Programming*, section 1.2, pp. 10-119, 2nd edn., This is a full INBOOK entry (Reading, Massachusetts: Addison-Wesley, 1973)), the booklet (Jill C. Kuvth, 'The Programming of Computer Art', Vernier Art Center, This is a full BOOKLET entry (Stanford, California, 1988)), and to the thesis (F. Phidias Phony-Baloney, *Fighting Fire with Fire: Festooning French Phrases*, PhD dissertation, Fanford University. This is a full PHDTHESIS entry (Department of French, 1988)). Combined citations like (Lincoll, Aamport) may have special appearance. The bibliography section for these citations comes next.

**phone.bst**

---

Format of reference list label	Name
Organization of reference list	Alphabetical
Format of citation	[Name]
Required files	<i>directory</i> package
Directory	TCITeX/BibTeX/bst/directory
Sample Bib <sub>T</sub> E <sub>X</sub> Databases:	
	business.bib
	family.bib
	test.bib

---

The style is part of `directory`, a macro package for L<sup>A</sup>T<sub>E</sub>X and Bib<sub>T</sub>E<sub>X</sub> that facilitates the construction, maintenance, and use of a database that is similar to an address book. You can use the package to construct your own address book; in this way, the package operates like ordinary Bib<sub>T</sub>E<sub>X</sub> styles except that the reference list it produces contains information about companies, people, and places instead of published articles and books. You can also use the package to include information about companies, people, and places in your document; see `letter.bst` on page 507.

All styles associated with `directory` require the L<sup>A</sup>T<sub>E</sub>X *directory* package, which is available on the program CD in the directory `CTAN/biblio/bibtex/contrib/directory`. Follow the standard procedure for adding the package to your program installation. Modifications are required to use entries derived from both `directory` operations and standard bibliography operations in the same document. For more information, see the file `directory.tex` in `CTAN/biblio/bibtex/contrib/directory` on the program CD.

The `directory` styles also require the use of the `\dir{key}` command instead of the `\cite{key}` command. In your document, use T<sub>E</sub>X fields containing `\dir{key}` commands instead of standard citations, as described below. The styles support a `\nodir{key}` command, which creates a phone book with no citations in the text.

The `phone.bst` style produces a reference list containing the name, phone, and fax fields that correspond to the cited keys. It prints an abbreviated name at the citation point unless the `\nodir{key}` command is used.

► **To enter a `\dir` command in a T<sub>E</sub>X field**

1. Place the insertion point where you want the citation to appear.
2. From the Insert menu, choose Typeset Object and then choose TeX Field.
3. In the entry area, type `\dir{key}` where *key* is the key for the database entry you want to cite.
4. Choose OK.

The first sample shown below illustrates a phone list created with `\dir{key}` commands in the text. The second sample illustrates a phone list created using a `\nodir{*}` command without any preceding text. The samples were created using the sample databases `business.bib` and `family.bib`.

## Sample Citations and Bibliography

### Example using phone

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. The citations in this sentence have been created with  $\TeX$  commands that replace standard citations. The phone book below contains numbers for **Knudsoft (RS.2 Computer Room)** and also for **Microknud Corp.**. It also contains listings for **Knudson D. D., Bunny B. and Pluto** and for **Knudson D. E.**. The phone book for these citations comes next.

**Knudsoft (RS.2 Computer Room)** phn: +01-(0)2-434.23.23

**Knudson D. D., Bunny B. and Pluto** p phn: +01-(0)2-765.43.21 gsm: +01-(0)5-555.55.55 r phn: +01-(0)2-876.54.32

**Knudson D. E.** p phn: +01-(0)2-234.56.78

**Microknud Corp.** phn: +01-(0)2-465.83.99 fax: 005.79.00

## Sample Citations and Bibliography

### Example using phone

**Geuzaine C.** w phn: +32-(0)4-366.37.10 fax: +32-(0)4-366.29.10

**Knudsoft (RS.2 Computer Room)** phn: +01-(0)2-434.23.23

**Knudson D. D., Bunny B. and Pluto** p phn: +01-(0)2-765.43.21 gsm: +01-(0)5-555.55.55 r phn: +01-(0)2-876.54.32

**Knudson D. E.** p phn: +01-(0)2-234.56.78

**Microknud Corp.** phn: +01-(0)2-465.83.99 fax: 005.79.00

**phpf.bst**

---

Format of reference list label	[number]
Organization of reference list	In order of first citation
Format of citation	[number]
Directory	TCITeX/BibTeX/bst/beebe

---

The style is for *Physics of Fluids*. It is similar to the style used in American Institute of Physics journals, but lists any number of authors for multi-author publications.

**Sample Citations and Bibliography****Example using phpf**

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [1] in a collection, the article [2] in a proceedings, the article [3], the book [4], the booklet [5], and to the thesis [6]. Combined citations like [1, 3] may have special appearance. The bibliography section for these citations comes next.

**References**

**phppcf.bst**

---

Format of reference list label	[AUTHOR, date] [AUTHOR and AUTHOR, date] [AUTHOR <i>et al.</i> , date]
Organization of reference list	In order of first citation
Format of citation	[AUTHOR, date] [AUTHOR and AUTHOR, date] [AUTHOR <i>et al.</i> , date]
Directory	TCITeX/BibTeX/bst/beebe

---

The style is a physics version of `apalike.bst` (see page 447), which formats bibliography entries alphabetically by author, last name first. Citations in the text can include single and multiple author-date references. In citations and in the reference list, the style prints authors' names in small capitals.

### Sample Citations and Bibliography

#### Example using phppcf

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [LINCOLL, 1977] in a collection, the article [OAHO *et al.*, 1983] in a proceedings, the article [AAMPOR, 1986], the book [KNUTH, 1981], the booklet [KNUTH, 1988], and to the thesis [PHONY-BALONEY, 1988]. Combined citations like [LINCOLL, 1977, AAMPOR, 1986] may have special appearance. The bibliography section for these citations comes next.

#### References

- [AAMPOR, 1986] AAMPOR, L. A. (1986). *G-Animal's Journal* **41**, 73+. This is a full ARTICLE entry.

**plabbrv.bst**

---

Format of reference list label	[number]
Organization of reference list	Alphabetical by author
Format of citation	[number]
Directory	TCITeX/BibTeX/bst/plbib
Sample BibT <sub>E</sub> X Database:	
plbib.bib	

---

The style is for text in Polish. Like `abbrv.bst`, this style creates compact entries by abbreviating first names, month names, and journal names. It sorts entries alphabetically and labels them with numbers.

### Sample Citations and Bibliography

#### Example using `plabbrv`

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [4] in a collection, the article [5] in a proceedings, the article [1], the book [2], the booklet [3], and to the thesis [6]. Combined citations like [4, 1] may have special appearance. The bibliography section for these citations comes next.

**plain.bst**

---

Format of reference list label	[number]
Organization of reference list	Alphabetical by author
Format of citation	[number]
Directory	TCITeX/BibTeX/bst/base

---

One of the Bib<sub>T</sub>E<sub>X</sub> standard bibliography styles, `plain.bst` creates bibliographies formatted more or less as suggested by van Leunen in *A Handbook for Scholars*. The style sorts entries alphabetically and labels them with numbers. The style is the basis for many other bibliography styles.

### Sample Citations and Bibliography

#### Example using plain

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [4] in a collection, the article [5] in a proceedings, the article [1], the book [2], the booklet [3], and to the thesis [6]. Combined citations like [4, 1] may have special appearance. The bibliography section for these citations comes next.

**plainhtml.bst**

---

Format of reference list label	[authoryear]
Organization of reference list	Alphabetical by author
Format of citation	[authoryear]
Directory	TCITeX/BibTeX/bst/bibhtml
Sample Bib <sub>T</sub> E <sub>X</sub> Database:	
bibrefs.bib	

---

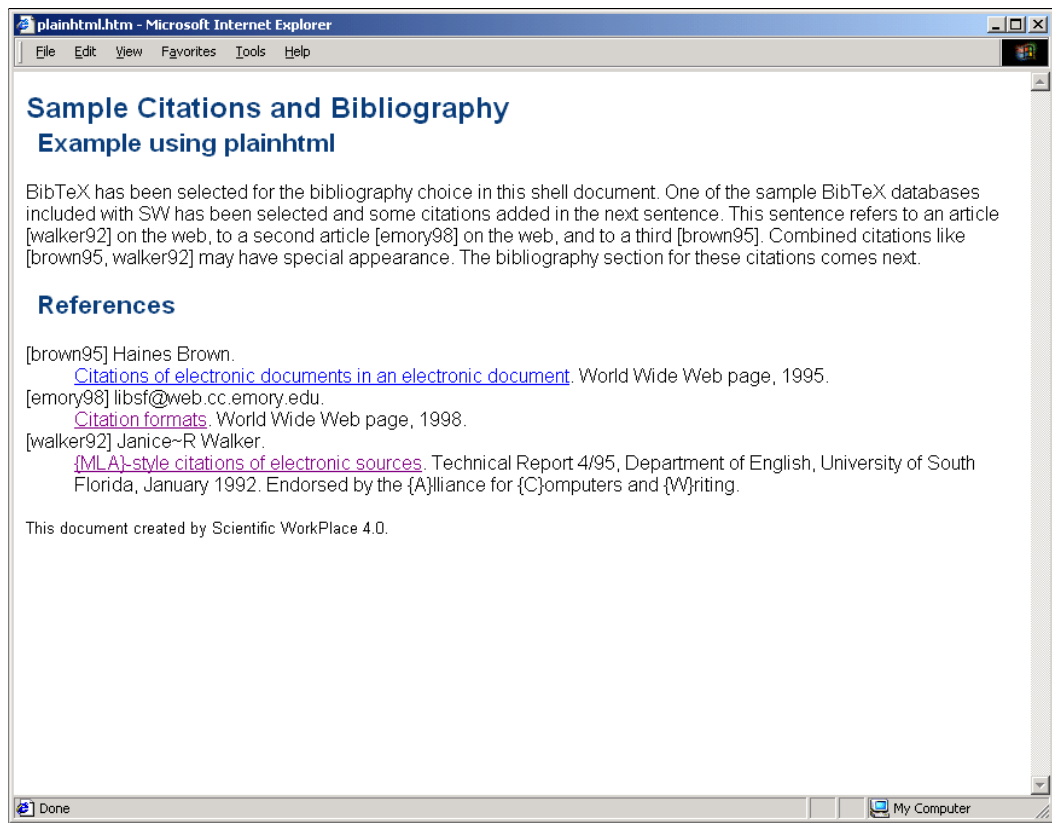

This style creates a reference list appropriate for use on websites. It produces the reference list as an HTML file contained within the commands `<d1>` and `</d1>`. The style supports URL fields within the bibliographic information, so that entries in the bibliography become links to the resources themselves. The resulting HTML file can be incorporated into the HTML file for the document containing the citations. The symbols ~and – remain in the output file, but can be changed with a post-processor to `&nbsp;`; and `&nbsp;`; or ' ' and ' - ' as required. The style doesn't produce an automatic heading for the list of references. The style is based on `plain.bst`, which sorts references alphabetically. The styles `plainhtmldate.bst` and `plainhtmldater.bst` are related.

To use the style in *SWP* and *SW*, follow the standard procedure to insert citations in your document and to specify and generate a Bib<sub>T</sub>E<sub>X</sub> bibliography. Then, incorporate the resulting HTML file into your document according to the instructions that follow.

► **To incorporate the HTML bibliography into a document**

1. Using an ASCII editor, open the `.bbl` file created for your document.
2. Copy the contents of the file to the clipboard.
3. Open your document in *SWP* or *SW*.
4. Delete the `[BIBTEX]` instruction.
5. In its place, insert an HTML object:
  - a. From the **Insert** menu, choose **HTML Field**.
  - b. Paste the contents of the clipboard into the field.
  - c. Choose **OK**.
6. Export the file to HTML:
  - a. From the **File** menu, choose **Export Document**.
  - b. Select the document.
  - c. In the **Save as type** box, choose the HTML format you want.
  - d. Choose **OK**.

The sample `.htm` file shown on the next page was created according to these instructions and using a modification of the sample bibliography `bibrefs.bib`.

**plainhtmldate.bst**

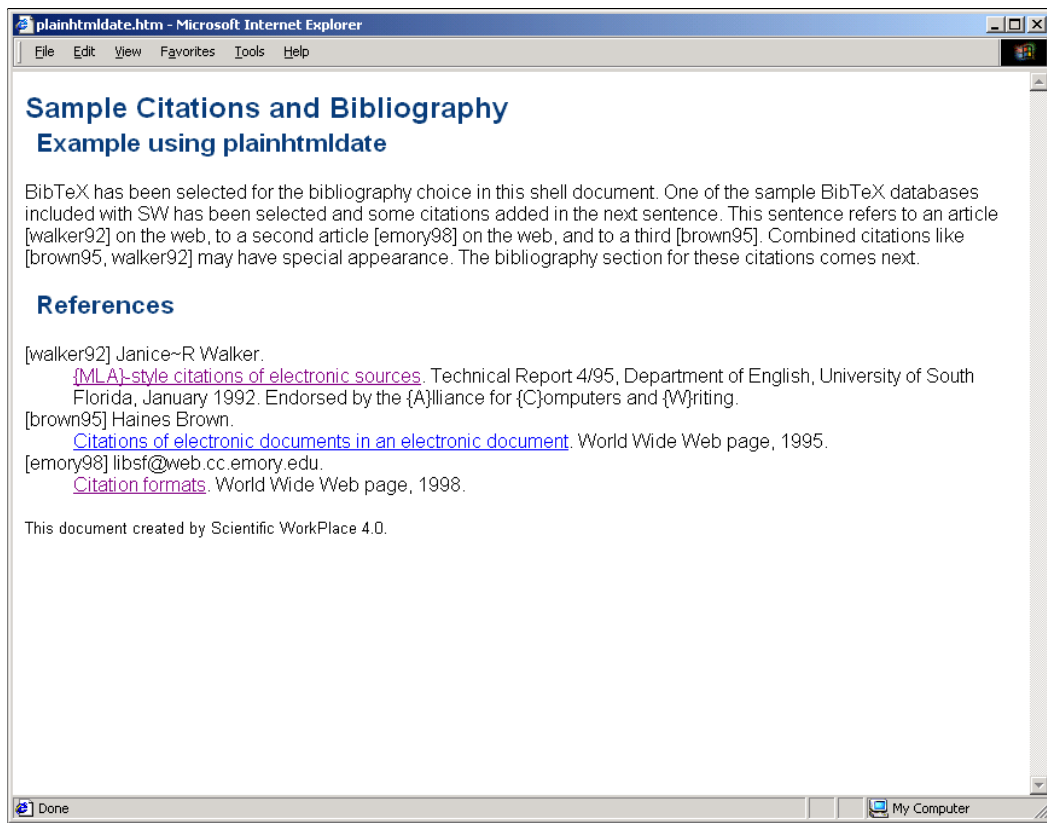

---

Format of reference list label	[authoryear]
Organization of reference list	Chronological order
Format of citation	[authoryear]
Directory	TCITeX/BibTeX/bst/bibhtml
Sample Bib <sub>T</sub> E <sub>X</sub> Database:	
bibrefs.bib	

---

This style creates a reference list appropriate for use on websites. It produces the reference list as an HTML file contained within the commands `<d1>` and `</d1>`. The style supports URL fields within the bibliographic information, so that entries in the bibliography become links to the resources themselves. The resulting HTML file can be incorporated into the HTML file for the document containing the citations. The symbols `~` and `-` remain in the output file, but can be changed with a post-processor to `&nbsp;`; and `&nbsp;`; or `'` and `'` as required. The style doesn't produce an automatic heading for the list of references. The style is based on `plainhtml.bst`, but lists references in chronological order. It is related to `plainhtmldater.bst`.

To use the style in *SWP* and *SW*, follow the standard procedure to insert citations in your document and to specify and generate a Bib<sub>T</sub>E<sub>X</sub> bibliography. Then, incorporate the resulting HTML file into your document as described for `plainhtml.bst` on page 538. The sample `.htm` file below was created according to those instructions and using a modification of the sample bibliography `bibrefs.bib`.

## plainhtmldater.bst

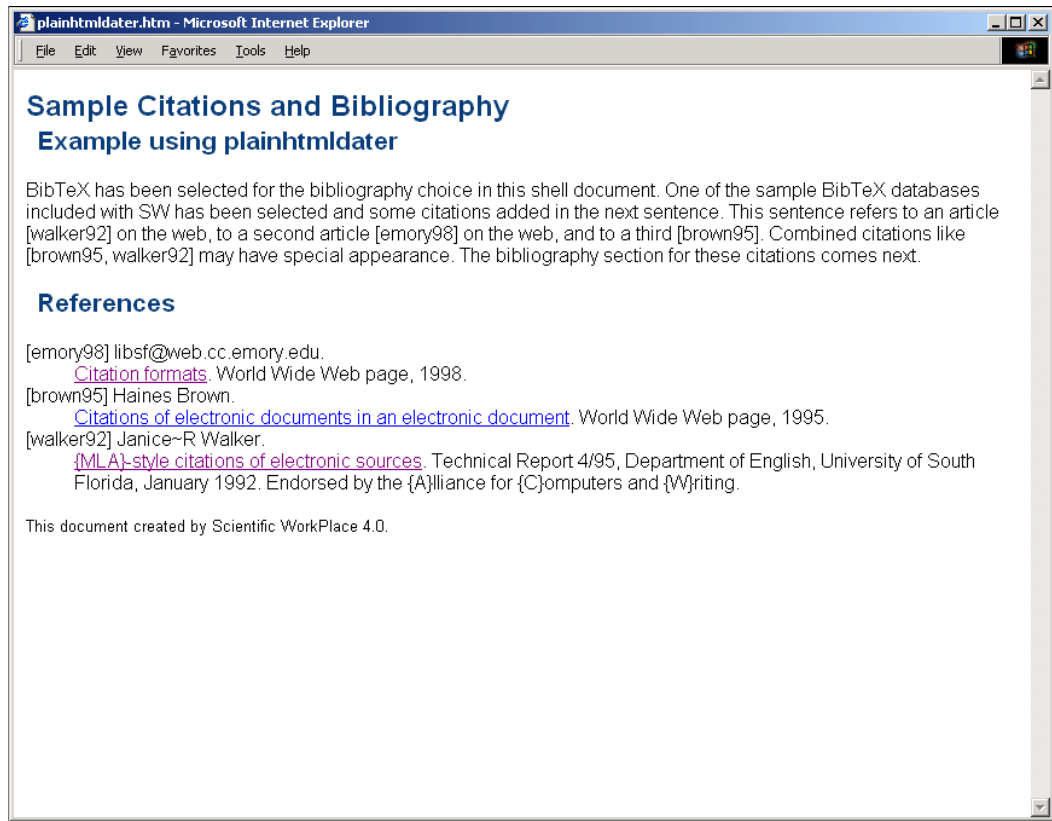

---

Format of reference list label	[authoryear]
Organization of reference list	Reverse chronological order
Format of citation	[authoryear]
Directory	TCITeX/BibTeX/bst/bibhtml
Sample BibTeX Database:	
bibrefs.bib	

---

This style creates a reference list appropriate for use on websites. It produces the reference list as an HTML file contained within the commands `<d1>` and `</d1>`. The style supports URL fields within the bibliographic information, so that entries in the bibliography become links to the resources themselves. The resulting HTML file can be incorporated into the HTML file for the document containing the citations. The symbols `~` and `-` remain in the output file, but can be changed with a post-processor to `&nbsp;` and `&nbsp;space;` or `'` and `'` as required. The style doesn't produce an automatic heading for the list of references. The style is based on `plainhtml.bst`, but lists references in reverse chronological order. It is related to `plainhtmldate.bst`.

To use the style in *SWP* and *SW*, follow the standard procedure to insert citations in your document and to specify and generate a BibTeX bibliography. Then, incorporate the resulting HTML file into your document as described for `plainhtml.bst` on page 538. The sample .htm file below was created according to those instructions and using a modification of the sample bibliography `bibrefs.bib`.

**plalpha.bst**

---

Format of reference list label	[Source label]
Organization of reference list	Alphabetical by author
Format of citation	[Source label]
Directory	TCITeX/BibTeX/bst/plbib

---

The style is for text in Polish. Like `alpha.bst`, this style uses source labels such as *Knu66*, formed from the author's name and the year of publication.

**Sample Citations and Bibliography****Example using plalpha**

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [Lin77] in a collection, the article [OUY83] in a proceedings, the article [Aam86], the book [Knu81], the booklet [Kuv88], and to the thesis [PB88]. Combined citations like [Lin77, Aam86] may have special appearance. The bibliography section for these citations comes next.

**plunsrt.bst**

---

Format of reference list label	[number]
Organization of reference list	In order of first citation
Format of citation	[number]
Directory	TCITeX/BibTeX/bst/plbib
Sample BibT <sub>E</sub> X Database:	
plbib.bib	

---

The bibliography style is for text in Polish. Like `unsrt.bst`, this style lists bibliography entries in the order of their first citation and labels them with numbers.

### Sample Citations and Bibliography

#### Example using plunsrt

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [1] in a collection, the article [2] in a proceedings, the article [3], the book [4], the booklet [5], and to the thesis [6]. Combined citations like [1, 3] may have special appearance. The bibliography section for these citations comes next.

#### References

**revcompchem.bst**

---

Format of reference list label	[number]
Organization of reference list	In order of first citation
Format of citation	[number]
Directory	TCITeX/BibTeX/bst/chem-journal

---

This bibliography style is for *Reviews in Computational Chemistry*. The style omits the title of entries classified as ‘article’, ‘book’, ‘inbook’, and ‘incollection’ and omits information coded as ‘note’ in all entries except those classified as ‘unpublished’.

### Sample Citations and Bibliography

#### Example using revcompchem

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [1] in a collection, the article [2] in a proceedings, the article [3], the book [4], the booklet [5], and to the thesis [6]. Combined citations like [1, 3] may have special appearance. The bibliography section for these citations comes next.

**siam.bst**

---

Format of reference list label	[number]
Organization of reference list	Alphabetical by author
Format of citation	[number]
Directory	TCITeX/BibTeX/bst/base

---

One of the Bib<sub>T</sub>E<sub>X</sub> standard bibliography styles, `siam.bst` (24-Jan-88 version) uses the abbreviations of the *Mathematical Reviews*. The style prints authors' names in the reference list in small capitals. It prints titles in italics, with article titles in lowercase and book titles in mixed upper- and lower-case letters. Commas separate all fields except before notes.

**Sample Citations and Bibliography****Example using siam**

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [4] in a collection, the article [5] in a proceedings, the article [1], the book [2], the booklet [3], and to the thesis [6]. Combined citations like [4, 1] may have special appearance. The bibliography section for these citations comes next.

**smfalpha.bst**

---

Format of reference list label	[Source label]
Organization of reference list	Alphabetical by author
Format of citation	[Source label]
Directory	TCITeX/BibTeX/bst/smflatex

---

The style was designed for the Société Mathématique de France. It uses source labels such as *Knu66*, formed from the author's name and the year of publication. The style sorts entries alphabetically and prints authors' names in small capitals in the reference list.

### Sample Citations and Bibliography

#### Example using smfalpha

BibTeX has been selected for the bibliography choice in this shell document. One of the sample BibTeX databases included with SW has been selected and some citations added in the next sentence. This sentence refers to the article [Lin77] in a collection, the article [OUY83] in a proceedings, the article [Aam86], the book [Knu81], the booklet [Kuv88], and to the thesis [PB88]. Combined citations like [Lin77, Aam86] may have special appearance. The bibliography section for these citations comes next.
